

BUNGE

2012 Annual Report

Fundamentals

Financial Highlights

VOLUMES
(millions of metric tons)

TOTAL SEGMENT EBIT^{(1) (2)}
(US \$ in millions)

NET INCOME ATTRIBUTABLE
TO BUNGE⁽²⁾
(US \$ in millions)

RETURN ON INVESTED CAPITAL^{(1) (2) (3)}
(percentage)

EARNINGS PER SHARE-DILUTED⁽²⁾
(US \$)

CASH DIVIDENDS DECLARED
PER COMMON SHARE
(US \$)

(1) Total segment earnings before interest and tax ("EBIT") and return on invested capital ("ROIC") are non-GAAP financial measures. Reconciliations to the most directly comparable U.S. GAAP financial measures are presented on the inside back cover of this annual report.

(2) 2010 Total Segment EBIT of \$878 million, Net Income Attributable to Bunge of \$543 million, ROIC of 7% and \$3.48 of Earnings Per Share-Diluted include approximately \$2.4 billion pre-tax and \$1.9 billion after-tax gains on the sale of the Brazilian fertilizer nutrients assets and a \$90 million loss on extinguishment of debt.

(3) Included in 2012 are pretax charges of \$514 million and \$145 million related to goodwill impairment and discontinued operations, respectively. Excluding these charges, ROIC for 2012 would be 5%.

Fundamentals

Ensuring food security for a growing world requires sustainably producing and delivering millions of tons of agricultural commodities. Bunge's value chains—integrated businesses and operations—begin at the farm and end with consumers. They enable us to produce the food, fuel and other products people count on every day.

Letter to Shareholders

The title of this year's annual report, *Fundamentals*, speaks to the drivers of Bunge's past accomplishments, our current focus and the critical foundation for tomorrow's success. In this letter, my last as CEO, I will touch upon the fundamentals as I see them. None is more important, and none gives me greater confidence, than the strength of our people. In Soren Schroder, who will become CEO on June 1, in our extended management team and in our thousands of dedicated employees worldwide, we have capable hands that will lead Bunge to a profitable future.

Competitive Fundamentals

In the late 1990s, the Board of Directors and I saw clear opportunities in agribusiness and food—burgeoning demand for products in emerging markets, productivity achievements among farmers in the Americas and Eastern Europe, newly liberalized markets in a globalizing economy. At that time, Bunge was long-established but was not positioned to capitalize on these trends. It was a second-tier player; a regional company that needed to expand; a collection of operations that needed a unified approach and culture. As leaders, our primary mission was to endow Bunge with the capabilities to compete in an exciting market—the fundamentals that would unlock a new era of growth and performance.

We did this and more. Total shareholder returns since Bunge's IPO in 2001 have averaged 15.5% per annum and enterprise value has increased 5 times. Our balance sheet is significantly stronger and our operations are more efficient, safe and sustainable. Since 2008 we have saved over \$500 million through operational excellence programs; lost-time accidents among our employees have decreased by 75% since 2004; and after setting public goals in 2010 we have reduced materially our water use, greenhouse gas emissions and waste.

Today, Bunge is in a position of strength. We have the right fundamentals: a global network of efficient facilities, an integrated chain of operations that stretch from farm gate to retail shelf, a diversified product portfolio, excellent risk management, a talented multinational team and a strong entrepreneurial culture. Together, these attributes form a foundation for future success. And we are building on it in important ways: expanding in key geographies and adjacent businesses, building an innovation platform across segments, re-imagining our approach to talent management and instituting more systematic and aggressive efforts in operational excellence.

Today, Bunge is in a position of strength. We have the right fundamentals: a global network of efficient facilities, an integrated chain of operations that stretch from farm gate to retail shelf, a diversified product portfolio, excellent risk management, a talented multinational team and a strong entrepreneurial culture.

Left to right: Soren Schroder, Alberto Weisser

The market opportunities remain compelling. In the coming decades, more of the world's growing population will be eating better diets than in any time in human history. Today 50% of the world lives in urban areas. By 2050 that share will grow to 70%. By 2020 the middle class, those earning over \$5,000 per annum, will swell by 4.9 billion. In Sub-Saharan Africa, consumer spending should more than double to nearly \$1 trillion by 2020.

Trade will become more vital, as agricultural production expands in North and South America, Eastern Europe and Africa—regions with the agronomic assets necessary for large-scale production. The ability to manage volatility will be required as competition for resources and climate change generate potential pressures on, and volatility in, supply.

In short, the services Bunge provides will be even more essential—and more valued.

Fundamentally Improving Performance

Bunge's results in 2012 reflected our ability to capitalize on these compelling trends and also areas in which we need to improve.

On the positive side, Bunge produced record full-year agribusiness results and solid food & ingredients earnings in a challenging environment. Successive droughts in the Americas, and dry conditions in Europe and other regions, led to production shortfalls in key crops, including corn and soybeans. Global stocks tightened, prices reached dizzying heights and demand and trade flows shifted markedly. To produce strong results in such a volatile period required tremendous

risk management skill and truly global operations. It is fair to say that in 2012, we showed the power of the businesses we have built over the past decade.

We also took steps to strengthen these businesses—moving forward with joint venture oilseed processing projects in Romania and Paraguay, extending our agribusiness origination network in Sub-Saharan Africa and Australia, expanding our wheat milling presence in Mexico, and strengthening our business in India with new production facilities and the acquisition of Amrit Banaspati, a leading producer of branded fats and oils.

In 2012 we also agreed to sell our Brazilian retail fertilizer business. This step will create a more streamlined operation with less price risk. Moving forward, our ongoing fertilizer business will serve as a stronger, more appropriately scaled complement to our core agribusiness operations.

In sugar & bioenergy, however, we are not producing the value we should or can. The returns in this segment have to be better, and we are taking fundamental steps to see that they are.

Our principal goal is reducing unit production costs. Last year we planted or replanted 68,000 hectares of sugarcane, which should help us crush at our full capacity of 21 million metric tons this season and dilute the naturally high fixed costs of this business. We are taking other steps to improve the efficiency of our cultivation, harvesting and industrial activities, as well. We expect unit costs per ton of cane and ton of sugar to fall by 10% and 15%, respectively, this year when compared to 2012.

Bunge's ultimate success rests in the hands of its next generation of leaders. In this sense, I could not be more optimistic. Soren Schroder is the right person to lead Bunge toward its third century.

A more diversified revenue stream—achieved through greater cogeneration and anhydrous ethanol capacity—better weather and more economically balanced government policy will also help. Problematic weather in recent years has contributed to the lowest sugar content per ton of cane (ATR) in two decades, and the Brazilian government has kept gasoline prices too low to ensure adequate margins for hydrous ethanol. Fortunately, we expect a recovery in ATR in 2013, which will provide a boost to margins. And in February, the Brazilian government announced a nearly 7% increase in gasoline prices at the pump. Brazilian ethanol producers need even higher prices in order to produce the levels of ethanol that Brazilian society needs, but this is a welcome step.

The fundamentals of the sugar & bioenergy business speak to its long-term potential. Global demand for sugar is growing and Brazil has a strong position as the world's leading exporter. The Brazilian car fleet is expanding, gasoline consumption is rising at 7% per year and the nation's electricity consumption is also growing. All of these trends bode well for our business, and our expectation is that sugar & bioenergy will be a profitable and strong part of Bunge's portfolio for years to come. We are committed to making its promise a reality.

Improved performance in sugar & bioenergy, coupled with continued success in agribusiness and food & ingredients, should enable Bunge to generate returns at or above its cost of capital this year. This is an important point. A successful past and a promising future can both engender confidence, but we have to deliver for shareholders in the here and now. I am convinced that the strength of our core businesses and the improvements we are making in sugar & bioenergy will enable us to do so in 2013.

Fundamentally Optimistic

Of course, Bunge's ultimate success rests in the hands of its next generation of leaders. In this sense, I could not be more optimistic. Soren Schroder is the right person to lead Bunge toward its third century. He has a great track record. Soren was instrumental in building our global marketing and trading unit and establishing our agribusiness franchise in Europe and the Middle East, and since 2010 he has been a strong leader of Bunge North America. Soren also brings to the role of

CEO deep industry experience, a global view and the values, passion and energy that are fundamental to effective leadership.

He will benefit from the oversight, support and input of the Board of Directors, which is evolving in step with the growth and increasing geographic and product diversity of the business. In the past 18 months, the Board has welcomed three new independent directors, James Hackett, Kathleen Hyle and Andrew Ferrier, who hail from the energy and agribusiness sectors. We also said a fond farewell and thank you to three directors, Octavio Caraballo, Jorge Born, Jr. and Larry Pillard.

The Board has taken appropriate steps to ensure a well planned, smooth and successful CEO transition. Until June 1, I will continue as CEO and Soren will gain exposure to additional parts of the business and meet with employees, customers and investors. In the second half of the year, I will serve as executive chairman, and my priority will be ensuring that Soren has the support he needs to succeed.

Leaving the Bunge team will be difficult. It has been an honor to lead this group, and I am immensely proud of what we have accomplished together. But 2013 is my 15th year as chairman and CEO, and 15 is a good number. The time is right to entrust the company to proven colleagues, and to let new ideas and perspectives come forth. The time is right for me to transition from manager to mentor.

Mark Twain famously wrote that "the first half of life consists of the capacity to enjoy without the chance; the last half consists of the chance without the capacity." If I intend to prove him wrong, I better get started.

Thank you for your confidence these past years. I look forward to participating in Bunge's ongoing success alongside you, as a fellow shareholder.

Regards,

Alberto Weisser

Chairman & Chief Executive Officer

crop production and consumption
markets, with more than

400 facilities in over 40 countries

Fundamentals in Agribusiness

One of the most important services Bunge provides to the world is the effective management of trade flows. Through efficient logistics, skilled risk management and field-to-fork integration, we ensure that customers get the products they need, regardless of the weather outside.

The past few years have kept us busy. Production shortfalls around the world have led to dramatic shifts in trade flows. 2012 was no exception. How Bunge managed through a very challenging corn market last year provides a snapshot of what we do and how we produce value for customers and shareholders.

Severe drought in the U.S. led to massive shortfalls in corn production. In fact, when combined with a short 2011 harvest, U.S. corn production was 100 million tons lower than trendline. The scale of this shortfall was immense—something not seen in a generation. To put it in perspective, total global trade in corn is also about 100 million tons. When combined with relatively steady demand, this supply reduction led to high prices and volatility.

Bunge managed the changes by acting quickly and in a globally coordinated manner. We leveraged our market insight, risk management skill and global asset network to bridge gaps in supply and link customers with new origins.

Key to our approach was increasing our purchases of corn in Brazil. We switched our origination program from the U.S. to take advantage of Brazil's August safrinha crop, and increased our Brazilian origination by roughly 6 million tons.

Simply put, we bought from farmers early and were ready to serve customers when they came to the market. We shifted product flow through our domestic logistics network, including rail and port facilities, and in our ocean freight program. Where we had planned to ship soy, we shipped corn. All of these steps were coordinated at regional and global levels, by product line managers, as well as by commercial, logistics and origination teams.

We have always believed that to be successful in agribusiness a company needs a global asset network, excellent risk management and a diverse product portfolio. Value shifts from region to region and along the chain. To capture it—to serve customers—you have to be everywhere and manage that global business seamlessly. Bunge is and does.

We have always believed that to be successful in agribusiness a company needs a global asset network, excellent risk management and a diverse product portfolio.

We believe the end result will be higher volumes, lower costs, improved margins and a segment that delivers its full potential.

Fundamentals in Sugar & Bioenergy

Sugar & bioenergy is a business with significant long-term potential driven by steady increase in demand for core products and unique opportunities from developments in biotechnology. Bunge entered the global sugar market as a trader in 2006, and has since built a strong position as a producer and marketer of sugar and ethanol produced from sugarcane.

Our presence includes eight mills in Brazil, from which we produce multiple product streams: sugar (both raw and refined), hydrous and anhydrous ethanol, and electricity. Brazil is an ideal location. The nation is not only the largest producer and exporter in the world, responsible for over 50% of global sugar trade, it also has a growing domestic market for ethanol, driven by the rapid expansion of its flex-fuel car fleet. Brazil also exports cane-based ethanol, which has a low greenhouse gas profile, to the Middle East, Asia and the U.S., where it qualifies as an advanced biofuel.

While we believe our footprint in Brazil has strategic advantages, we've faced some challenges in the last three years that have affected the business's performance. Adverse weather conditions have impacted yields for both sugarcane and ATR (sugar content per ton of cane), taking them to lows not seen in over 20 years. And the domestic price for ethanol in Brazil has been pressured by a government cap on pump prices for gasoline.

In 2013, however, we are seeing improvements. Yields are forecast to increase and the Brazilian government has begun to allow fuel prices to increase closer to market levels. These are positive developments that will benefit our results, but we are not waiting for

external factors to improve. In the meantime, we're working to improve the mix of our products. We expect to increase our volume of anhydrous ethanol by 60% in 2013 to reduce our reliance on hydrous ethanol, and we're investing to produce more crystal sugar. And we're building an innovative joint venture with biotech company Solazyme that will use microalgae to convert sugars into tailored oils.

We're also taking aggressive steps to improve the performance of our operations. Our primary goal is lowering unit production costs. We've benchmarked all of our mills and developed action plans to achieve best-in-class performance in each.

The work starts in the field, where we are conducting a significant planting program and improving overall agronomics through better cane varieties, irrigation, fertilization and precision agriculture. The result is that we should crush at full capacity in 2013, which will help dilute fixed costs.

We're safely increasing the speed and efficiency at which we harvest by renewing our fleet of harvesters, systematizing the planting of our fields to allow for their smoother operation, investing in preventive maintenance to reduce downtime and enhancing staff training. We're also improving logistics by installing onboard computers and using telemetry. All of these steps should reduce unit costs per ton of cane by 10% in 2013 and another 10% in 2014.

We believe the end result will be higher volumes, lower costs, improved margins and a segment that delivers its full potential.

Fundamentals in Food & Ingredients

Bunge's food & ingredients business extends our core value chains in oilseeds and edible grains downstream into higher value products. The strategic role of food & ingredients within the Bunge portfolio is to deliver growth, improve returns and lessen the volatility of earnings.

In both grains and edible oils, we're building B2B platforms serving industrial food processors and food service companies. And in edible oils we have also moved down the chain into B2C markets that can offer strong growth and good returns.

The business has grown from its Brazilian and U.S. base to include operations in every region of the world, with a more balanced spread of volume, profit and opportunity. This global platform provides a springboard for further growth.

Customers are at the core of our approach. Food & ingredients works along the full value chain in an integrated fashion with Bunge's agribusiness in sourcing, processing, managing risk and sharing industrial footprints. This provides our customers reliable access to commodities and an assured supply of quality, food-safe ingredients. Our scale and integration, combined with production and sourcing flexibility, provide cost efficiencies. And our world-class oil and grains expertise, along with technical and innovation support, help enable our customers' growth plans.

We take a total value chain approach to working with our customers. In milling, we optimize product specification to the customer's production process. One example is a large commercial bakery in Brazil. We source, grade and blend wheat to deliver the customer a consistent specification. And then we work with their production teams to set their baking process to maximize efficiency and minimize waste.

In edible oils, we're the experts. We know how our ingredients work, and we cook with customers in our test kitchens to better understand their product formulations and the challenges they are facing. At our tasting and testing facility in Bradley, Illinois, we prepare products with customers who test their recipes and learn more about ingredient functionality and potential for future applications.

And we're expanding our edible oils expertise in other regions where we operate, including India. India is one of the largest markets in the world for vegetable oil, and its consumers are shifting increasingly to branded products for quality and food safety reasons. Last year, we completed our acquisition of Amrit Banaspati, which has some of India's best-selling brands. In addition to increasing our portfolio of products, the Amrit acquisition adds over 200,000 distribution points in the north and northeast of the country, and enables us to leverage our Masterline specialty bakery fats business in more regions.

At the Academia Bunge in Brazil, customers learn about ingredient functionality

We also produce our own consumer brands, leveraging demographic and nutritional trends to make products that capture additional value.

CAUTIONARY STATEMENT REGARDING FORWARD LOOKING STATEMENTS

The Private Securities Litigation Reform Act of 1995 provides a “safe harbor” for forward looking statements to encourage companies to provide prospective information to investors. This Annual Report on Form 10-K includes forward looking statements that reflect our current expectations and projections about our future results, performance, prospects and opportunities. Forward looking statements include all statements that are not historical in nature. We have tried to identify these forward looking statements by using words including “may,” “will,” “should,” “could,” “expect,” “anticipate,” “believe,” “plan,” “intend,” “estimate,” “continue” and similar expressions. These forward looking statements are subject to a number of risks, uncertainties, assumptions and other factors that could cause our actual results, performance, prospects or opportunities to differ materially from those expressed in, or implied by, these forward looking statements. These factors include the risks, uncertainties, trends and other factors discussed under the headings “Item 1A. Risk Factors,” as well as “Item 1. Business,” “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations,” and elsewhere in this Annual Report on Form 10-K, including:

- changes in governmental policies and laws affecting our business, including agricultural and trade policies, environmental regulations, as well as tax regulations and biofuels legislation;
- our funding needs and financing sources;
- changes in foreign exchange policy or rates;
- the outcome of pending regulatory and legal proceedings;
- our ability to complete, integrate and benefit from acquisitions, divestitures, joint ventures and strategic alliances;

- our ability to achieve the efficiencies, savings and other benefits anticipated from our cost reduction, margin improvement, operational excellence and other business optimization initiatives;
- industry conditions, including fluctuations in supply, demand and prices for agricultural commodities and other raw materials and products that we sell and use in our business, fluctuations in energy and freight costs and competitive developments in our industries;
- weather conditions and the impact of crop and animal disease on our business;
- global and regional agricultural, economic, financial and commodities market, political, social and health conditions;
- operational risks, including industrial accidents and natural disasters; and
- other factors affecting our business generally.

In light of these risks, uncertainties and assumptions, you should not place undue reliance on any forward looking statements contained in this Annual Report. Additional risks that we may currently deem immaterial or that are not presently known to us could also cause the forward looking events discussed in this Annual Report not to occur. Except as otherwise required by federal securities law, we undertake no obligation to publicly update or revise any forward looking statements, whether as a result of new information, future events, changed circumstances or any other reason after the date of this Annual Report.

PART I

Item 1. BUSINESS

References in this Annual Report on Form 10-K to “Bunge Limited,” “Bunge,” “we,” “us” and “our” refer to Bunge Limited and its consolidated subsidiaries, unless the context otherwise indicates.

BUSINESS OVERVIEW

We are a leading global agribusiness and food company with integrated operations that stretch from the farm field to consumer foods. We believe we are a leading:

- global oilseed processor and producer of vegetable oils and protein meals, based on processing capacity;
- producer of sugar and ethanol in Brazil and a leading global trader and merchandiser of sugar, based on volume;
- seller of packaged vegetable oils worldwide, based on sales and
- blender and distributor of agricultural fertilizers to farmers in South America, based on volume.

Our strategy is to grow profitably by growing our core businesses, expanding into adjacent businesses where we can capitalize on our key competencies and pursuing operational excellence.

We conduct our operations in four divisions: agribusiness, sugar and bioenergy, food and ingredients and fertilizer. These divisions include five reportable business segments: agribusiness, sugar and bioenergy, edible oil products, milling products and fertilizer.

Our agribusiness segment is an integrated, global business principally involved in the purchase, storage, transport, processing and sale of agricultural commodities and commodity products. Our agribusiness operations and assets are primarily located in North and South America, Europe and Asia, and we have merchandising and distribution offices throughout the world.

Our sugar and bioenergy segment produces and sells sugar and ethanol derived from sugarcane, as well as energy derived from their production process, through our operations in Brazil. Our integrated operations in this segment also include global merchandising of sugar and ethanol, and we have minority investments in corn-based ethanol producers in the United States.

Our food and ingredients operations consist of two reportable business segments: edible oil products and milling products. These segments include businesses that produce and sell edible oils, shortenings, margarines, mayonnaise and milled products such as wheat flours, corn-based products and rice. The operations and assets of our milling products segment are located in Brazil, the United States and Mexico and the

operations and assets of our edible oil products segment are primarily located in North America, Europe, Brazil, China and India.

Our fertilizer segment is involved in producing, blending and distributing fertilizer products for the agricultural industry primarily in South America. In 2012, we entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire our Brazilian fertilizer business, including blending facilities, brands and warehouses, for \$750 million in cash, subject to certain post-closing adjustments. The transaction is subject to customary closing conditions, including the receipt of regulatory approvals in Brazil, and is expected to close in the second half of 2013.

HISTORY AND DEVELOPMENT OF THE COMPANY

We are a limited liability company formed under the laws of Bermuda. We are registered with the Registrar of Companies in Bermuda under registration number EC20791. We trace our history back to 1818 when we were founded as a trading company in Amsterdam, The Netherlands. During the second half of the 1800s, we expanded our grain operations in Europe and also entered the South American agricultural commodity market. In 1888, we entered the South American food products industry, and in 1938, we entered the fertilizer industry in Brazil. We started our U.S. operations in 1923. In 1997, we acquired Ceval Alimentos, a leading agribusiness company in Brazil. In 2002, with the acquisition of Cereol S.A., we significantly expanded our agribusiness and food and ingredients presence in Europe as well as in North America. In 2010, we significantly expanded our presence in the sugar industry with our acquisition of five sugarcane mills from the Moema Group in Brazil. We also divested our Brazilian fertilizer nutrients assets in 2010. In December 2012, we entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire our Brazilian fertilizer business.

2012 Summary Highlights. In 2012, we continued to expand our agribusiness operations, including through the entry into a joint venture in Eastern Europe with activities in oilseed processing and biodiesel production and the entry into a joint venture in Paraguay to construct an oilseed processing facility in the country. We completed construction of inland grain elevators in the U.S. to support our new grain export terminal in the Pacific Northwest, a biodiesel plant in Brazil and a compound animal feed mill in China. We also expanded the scope of a South African joint venture to market grains and oilseeds in Sub-Saharan Africa and sold our interest in The Solae Company joint venture. In sugar and bioenergy, we entered into a joint venture with Aceitera General Deheza S.A. in Argentina for the construction and operation of a corn wet mill. We continued to invest in sugarcane planting to increase the supply of raw material for our sugarcane mills and continued to invest in agricultural machinery and other assets to expand the proportion of mechanized harvesting and improve the efficiency of our agricultural operations. Additionally, we continued to expand the capacity of cogeneration facilities at certain of our sugarcane mills. We also established a joint venture with Solazyme Incorporated to build and operate a renewable oils production facility adjacent to one of our

sugarcane mills in Brazil. In our food and ingredients operations, we continued to expand our business through acquisition of a controlling interest in a wheat mill in Mexico, the acquisition of an edible oils and fats business in India, the construction of an edible oils refinery in India and expansion of existing facilities in North America and Brazil. In our fertilizer segment, we entered into an agreement with Yara to sell our Brazilian fertilizer business.

We are a holding company, and substantially all of our operations are conducted through our subsidiaries. Our principal executive offices and corporate headquarters are located at 50 Main Street, White Plains, New York, 10606, United States of America and our telephone number is (914) 684-2800. Our registered office is located at 2 Church Street, Hamilton, HM 11, Bermuda.

AGRIBUSINESS

Overview. Our agribusiness segment is an integrated global business involved in the purchase, storage, transport, processing and sale of agricultural commodities and commodity products while managing risk across various product lines. The principal agricultural commodities that we handle in this segment are oilseeds and grains, primarily soybeans, rapeseed or canola, sunflower seed, wheat and corn. We process oilseeds into vegetable oils and protein meals, principally for the food, animal feed and biodiesel industries through a global network of facilities. Our footprint is well balanced with approximately 36% of our processing capacity located in South America, 31% in North America, 19% in Europe and 14% in Asia. We also participate in the biodiesel industry, generally as a minority investor in biodiesel producers, primarily in Europe and Argentina. In connection with these biodiesel investments, we typically seek to negotiate arrangements to supply the vegetable oils used as raw materials in the biodiesel production process.

In July 2012, we acquired a 55% interest in a newly formed oilseed processing and biodiesel joint venture in Eastern Europe, which we consolidate. In March 2012, we completed the acquisition of Climate Change Capital Group Limited (CCC), an asset management business based in Europe.

Customers. We sell agricultural commodities and processed commodity products to customers throughout the world. The principal purchasers of our oilseeds and grains are animal feed manufacturers, wheat and corn millers and other oilseed processors. The principal purchasers of our oilseed meal products are animal feed manufacturers and livestock producers. As a result, our agribusiness operations generally benefit from global demand for protein, primarily poultry and pork products. The principal purchasers of the unrefined vegetable oils produced in this segment are our own food and ingredients division and third-party edible oil processing companies which use these oils as a raw material in the production of edible oil products for the foodservice, food processor and retail markets. In addition, we sell oil products for various non-food uses, including industrial applications and the production of biodiesel.

Distribution and Logistics. We have developed an extensive logistics network to transport our products, including trucks,

railcars, river barges and ocean freight vessels. Typically, we either lease the transportation assets or contract with third parties for these services. To better serve our customer base and develop our global distribution and logistics capabilities, we own or operate various port logistics and storage facilities globally, including in Brazil, Argentina, Russia, Ukraine, Vietnam, Poland, Canada and the United States.

Other Services and Activities. In Brazil, where there are limited third-party financing sources available to farmers for their annual production of crops, we provide financing services to farmers from whom we purchase soybeans and other agricultural commodities through prepaid commodity purchase contracts and advances. These financing arrangements are generally intended to be short-term in nature and are typically secured by the farmer's crop. These arrangements typically carry local market interest rates. Our farmer financing activities are an integral part of our grain and oilseed origination activities as they help assure the annual supply of raw materials for our Brazilian agribusiness operations. We also participate in financial activities, such as trade structured finance, which leverages our international trade flows, providing risk management services to customers by helping them manage exposure to agricultural commodity prices and other risks and developing private investment vehicles to invest in businesses or assets generally complementary to our commodities operations.

Raw Materials. We purchase oilseeds and grains either directly from farmers or indirectly through intermediaries. Although the availability and price of agricultural commodities may, in any given year, be affected by unpredictable factors such as weather, government programs and policies and farmer planting decisions, our operations in major crop growing regions globally have enabled us to source adequate raw materials for our operational needs.

Competition. Due to their commodity nature, markets for our products are highly competitive and subject to product substitution. Competition is principally based on price, quality, product and service offerings and geographic location. Major competitors include: The Archer Daniels Midland Co. (ADM), Cargill Incorporated (Cargill), Louis Dreyfus Group, Glencore International PLC, large regional companies such as Wilmar International Limited, Noble Group Limited and Olam International in Asia, and other companies in various countries.

SUGAR AND BIOENERGY

Overview. We are a leading, integrated producer of sugar and ethanol in Brazil, and a leading global trader and merchandiser of sugar. We wholly own or have controlling interests in eight sugarcane mills in Brazil, the world's largest producer and exporter of sugar. As of December 31, 2012, our mills had a total crushing capacity of approximately 21 million metric tons of sugarcane per year. Sugarcane, which is the raw material that we use to produce sugar and ethanol, is supplied by a combination of our own plantations and third-party farmers. Additionally, through cogeneration facilities at our sugarcane mills, we produce electricity from the burning of sugarcane bagasse (the fibrous portion of the sugarcane that remains after the extraction of sugarcane juice) in boilers, which enables our mills to meet their energy requirements and, for

most mills, sell surplus electricity to the local grid or other large third-party users of electricity. Our trading and merchandising activities are managed through our London office, which also oversees our regional marketing offices in other locations and manages sugar price risk for our business. We also have a small presence in the U.S. corn-based ethanol industry, where we have minority investments in two ethanol production facilities. In April 2012, we entered into a joint venture agreement with Solazyme Incorporated for the construction and operation of a production facility in Brazil which will use sugar supplied by one of our mills to produce renewable oils. We have a 49.9% interest in this entity. In 2012, we also entered into a joint venture for the construction and operation of a corn wet milling facility in Argentina. We have a 50% interest in this entity.

Raw Materials. Sugarcane is our principal raw material in this segment, and we both produce it and procure it through third-party supply contracts. The annual harvesting cycle in Brazil typically begins in late March/early April and ends in late November/early December. Once planted, sugarcane is harvested for five to six years, but the yield decreases with each harvest over the life cycle of the cane. As a result, after this period, old sugarcane plants are typically removed and the area is replanted. The quality and yield of the harvested cane are also affected by factors such as soil quality, topography, weather and agricultural practices. We have made significant investments in sugarcane planting over the past three years to provide a greater supply of raw material for our mills.

Our mills are supplied with sugarcane grown on approximately 339,000 hectares of land. This land represents approximately 7,800 hectares of land that we own, 228,000 hectares of land that we manage under agricultural partnership arrangements and 103,000 hectares of land farmed by third-party farmers. In 2012, approximately 62% of our total milled sugarcane came from our owned or managed plantations and 38% was purchased from third-party suppliers. Payments under the agricultural partnership agreements and third-party supply contracts are based on a formula which factors in the volume of sugarcane per hectare, sucrose content of the sugarcane and market prices for sugarcane set by Consecana, the São Paulo state sugarcane and sugar and ethanol council.

Our sugarcane harvesting process is currently 94% mechanized with the remaining 6% harvested manually. Mechanized harvesting does not require burning of the cane prior to harvesting, significantly reducing environmental impact when compared to manual harvesting and resulting in improved soil condition. Mechanized harvesting is also more efficient and has lower costs than manual harvesting. We intend to further increase our mechanization levels, including as required to meet applicable regulatory mandates for mechanization in certain states in Brazil.

Logistics. Harvested sugarcane is loaded onto trucks and trailers and transported to our mills. Since the sucrose content of the sugarcane begins to degrade rapidly after harvest, we seek to minimize the time and distance between the harvesting of the cane and its delivery to our mills for processing.

Products. Our mills allow us to produce ethanol, sugar and electricity, as further described below. At mills that produce

both sugar and ethanol, we are able to adjust our production mix within certain capacity limits between ethanol and sugar, as well as, for certain mills, between different types of ethanol (hydrous and anhydrous) and sugar (raw and crystal). The ability to adjust our production mix allows us to respond to changes in customer demand and market prices.

Sugar. Our current maximum sugar production capacity is 5,750 metric tons per day which, in a normal year of 5,000 hours of milling, results in an annual maximum production capacity of approximately 1.2 million metric tons of sugar. We produce two types of sugar: very high polarity (VHP) raw sugar and white crystal sugar. VHP sugar is similar to the raw sugar traded on major commodities exchanges, including the standard NY11 contract, and is sold almost exclusively for export. Crystal sugar is a non-refined white sugar and is principally sold domestically in Brazil.

Ethanol. Our current maximum ethanol production capacity is 6,300 cubic meters per day which, in a normal year of 5,000 hours of milling, results in an annual maximum production capacity of over 1.3 million cubic meters of ethanol. We produce and sell two types of ethanol: hydrous and anhydrous. Anhydrous ethanol is blended with gasoline in transport fuels, while hydrous ethanol is consumed directly as a transport fuel.

Electricity. We generate electricity from burning sugarcane bagasse in our mills. As of December 31, 2012, our total installed cogeneration capacity was approximately 214 megawatts, with 59 megawatts available for resale to third parties after supplying our mills' energy requirements, representing approximately 290,000 megawatt hours of electricity available for resale.

Customers. The sugar we produce at our mills is sold in both the Brazilian domestic and export markets. Our domestic customers are primarily in the confectionary and food processing industries. The ethanol we produce is primarily sold to customers for use in the domestic market to meet the growing demand for fuel. We also export ethanol in the international market, but recent export volumes have been relatively low due to tight ethanol supplies in Brazil. Our sugar trading and merchandising operations purchase and sell sugar and ethanol to meet international demand.

Competition. We face competition from both Brazilian and international participants in the sugar industry. Our major competitors in Brazil include Cosan Limited, São Martinho S.A., LDC-SEV Bioenergia, ED&F Man and our major international competitors include British Sugar PLC, Südzucker AG, Cargill, Tereos Group, Sucden Group and Noble Group Limited.

FOOD AND INGREDIENTS

Overview. Our food and ingredients division consists of two reportable business segments: edible oil products and milling products. We primarily sell our products to three customer types or market channels: food processors, foodservice companies and retail outlets. The principal raw materials used in our food and ingredients division are various crude and further-processed vegetable oils in our edible oil products segment, and corn, wheat and rice in our milling products

segment. These raw materials are agricultural commodities that we either produce or purchase from third parties. We seek to realize synergies between our food and ingredients division and our agribusiness operations through our raw material procurement activities, enabling us to benefit from being an integrated, global enterprise.

Edible Oil Products

Products. Our edible oil products include packaged and bulk oils, shortenings, margarines, mayonnaise and other products derived from the vegetable oil refining process. We primarily use soybean, sunflower and rapeseed or canola oil that we produce in our oilseed processing operations as raw materials in this business. We are a leading seller of packaged vegetable oils worldwide, based on sales. We have edible oil refining and packaging facilities in North America, South America, Europe and Asia. We market our edible oil products under various brand names, depending on the region, and in several regions we also sell packaged edible oil products to grocery store chains for sale under their own private labels.

In Brazil, our retail brands include *Soya*, the leading packaged vegetable oil brand, as well as *Primor* and *Salada*. We are also a leading player in the Brazilian margarine market with our brands *Delicia*, *Soya* and *Primor*, as well as in mayonnaise with our *Primor*, *Soya* and *Salada* brands. Our brand, *Bunge Pro*, is the leading foodservice shortening brand in Brazil. We also produce processed tomato and other staple food products, including sauces, pastes, condiments and seasonings in Brazil under established brand names, including *Etti*.

In the United States and Canada, *Nutra-Clear NT Ultra*, a high oleic canola oil, has become our leading brand by delivering trans fat free and low saturate frying solutions for many large foodservice and food processor customers. We have also introduced *Pour'n Fry NT Ultra*, a high oleic soybean oil, expanding our offerings of highly stable, trans fat free edible oil solutions. Most recently, we have developed proprietary processes that allow us to offer bakery and food processor customers a reduction in saturated fats in both shortenings and margarines of up to 40%. We also produce margarines and buttery spreads, including our leading brand *Country Premium*, for foodservice, food processor and retail private label customers.

In Europe, we are a leader in consumer packaged vegetable oils, which are sold in various geographies under brand names including *Venusz*, *Floriol*, *Kujawski*, *Olek*, *Unisol*, *Ideal*, *Oleina*, *Maslenitsa*, *Oliwier* and *Rozumnitsa* and a leader in margarines, including *Smakowita*, *Maslo Rosline*, *Manuel*, *Masmix*, *Deli Reform*, *Keiju*, *Evesol*, *Linco*, *Gottgott*, *Suvela* and *Holland Premium*. In November 2012, we acquired a margarine business in Poland in order to expand our consumer margarine market presence.

In Asia, our primary edible oil product brands include *Dalda*, *Chambal*, *Masterline Ginni*, *Merrigold*, *Merrilite*, *Gagan* and *Amrit* in India and *Douweijia* brand soybean oil in China. In February 2012, we completed the acquisition of the edible oils and fats business of Amrit Banaspati Company Limited, which has enabled us to expand our distribution, manufacturing and brand portfolio to serve a growing customer base.

Customers. Our customers include baked goods companies, snack food producers, restaurant chains, foodservice distributors and other food manufacturers who use vegetable oils and shortenings as ingredients in their operations, as well as grocery chains, wholesalers, distributors and other retailers who sell to consumers.

Competition. Competition is based on a number of factors, including price, raw material procurement, brand recognition, product quality, new product introductions, composition and nutritional value and advertising and promotion. Our products may compete with widely advertised, well-known, branded products, as well as private label and customized products. In addition, consolidation in the supermarket industry has resulted in customers demanding lower prices and reducing the number of suppliers with which they do business. As a result, it is increasingly important to obtain adequate access to retail outlets and shelf space for our retail products. In the United States, Brazil and Canada, our principal competitors in the edible oil products business include ADM, Cargill, Associated British Foods Plc, Stratas Foods, Unilever, Ventura Foods LLC and Brasil Foods S.A. In Europe, our principal competitors include ADM, Cargill, Unilever and various local companies in each country.

Milling Products

Products. Our milling segment activities include the production and sale of a variety of wheat flours and bakery mixes in Brazil and Mexico and corn-based products derived from the corn dry milling process, as well as rice milling in North America. Our brands in Brazil include *Suprema*, *Soberana*, *Primor* and *Predileta* wheat flours and *Gradina*, *Bentamix* and *Pre-Mescla* bakery premixes. Our corn milling products consist primarily of dry-milled corn meals, flours and grits (including flaking and brewer's grits), as well as soy-fortified corn meal, corn-soy blend and other similar products. We mill and sell bulk and packaged rice in the U.S. and also sell branded rice in Brazil under the *Primor* brand. In 2012, we acquired a majority equity stake in Harinera La Espiga S.A. de C.V., a wheat milling business in Mexico that produces flours and bakery mixes. Our brands in Mexico include *Espiga*, *Esponja*, *Francesera*, *Chulita*, *Galletera* and *Pastelera*.

Customers. In Brazil and Mexico, the primary customers for our wheat milling products are industrial, bakery and foodservice companies. In North America, the primary customers for our corn milling products are companies in the food processing sector, such as cereal, snack, bakery and brewing companies, as well as the U.S. government for humanitarian relief programs. Our U.S. rice milling business sells to customers in the food service and food processing channels, as well as for export markets.

Competition. In Brazil, our major competitors are Predileto Alimentos, M. Dias Branco, Moinho Pacifico and Moinho Anaconda, as well as many small regional producers. Our major competitors in our North American corn milling products business include Cargill, Didion Milling Company, SEMO Milling, LLC and Life Line Foods, LLC. Our major competitors in our U.S. rice milling business include ADM and Farmers Rice Cooperative. Our major competitors in Mexico include Grupo Elizondo, Molinera de México, Grupo Altex and Grupo Trimex.

FERTILIZER

Overview. We are a leading blender and distributor of crop fertilizers to farmers in South America, producing and marketing a range of solid and liquid NPK fertilizer formulations. NPK refers to nitrogen (N), phosphate (P) and potash (K), the main components of chemical fertilizers. In Brazil, we blend and distribute NPK fertilizers. In Argentina, we produce, blend and distribute NPK fertilizers including phosphate-based liquid and solid nitrogen fertilizers. We manage certain Brazilian port facilities and provide services relating to the loading and unloading of various products, primarily fertilizers. We also have a 50% interest in a joint venture with Office Chérifien des Phosphates (OCP), to produce fertilizer products in Morocco.

Brazil Fertilizer Nutrients Assets Disposition. In May 2010, we sold our fertilizer nutrients assets in Brazil, including our phosphate mining assets and our investment in Fosfertil S.A., a publicly-traded Brazilian phosphate and nitrogen producer, to Vale S.A., a Brazil-based global mining company, which we refer to as Vale. We retained our blending and distribution operations in Brazil. In connection with the sale, we entered into several agreements with Vale, including a supply agreement pursuant to which Vale will supply us with certain phosphate fertilizer products, including single superphosphate (SSP), a basic phosphate fertilizer, through 2012, which was extended by us in accordance with the terms of the agreement to December 31, 2013.

Pending Sale of Brazilian Fertilizer Blending and Distribution Business to Yara. In December 2012, we entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire our Brazilian fertilizer blending and distribution business, including blending facilities, brands and warehouses, for \$750 million in cash. We and Yara have also agreed to enter into a long-term fertilizer supply agreement, enabling us to continue to supply fertilizer to farmers as part of our grain origination activities in our agribusiness segment. We will retain and continue to operate our fertilizer terminal in the Port of Santos, Brazil. The transaction, which is expected to close in the second half of 2013, is subject to customary closing conditions, including the receipt of regulatory approvals in Brazil. The purchase price is subject to certain post-closing adjustments.

Products and Services. In our fertilizer operations, we produce, blend and distribute a variety of NPK formulations. These NPK fertilizers are used for the cultivation of a variety of crops, including soybeans, corn, sugarcane, cotton, wheat and coffee. In Brazil, we market our retail fertilizers under the *IAP*, *Manah*, *Ouro Verde* and *Serrana* brands. In Argentina, we market fertilizers under the *Bunge* brand, as well as the *Solmix* brand. Also in Argentina, we produce single superphosphate (SSP), as well as ammonia, urea and liquid fertilizers. In 2012, we sold our interest in a joint venture with GROWMARK, Inc., a North American regional agricultural cooperative, to operate a liquid and dry fertilizer storage terminal.

Raw Materials. Our principal raw materials in this segment are SSP, monoammonium phosphate (MAP), diammonium phosphate (DAP), triple superphosphate (TSP), urea, ammonium sulfate, potassium chloride concentrated phosphate rock, sulfuric acid and natural gas. Our Moroccan joint venture manufactures sulfuric acid, phosphoric acid, TSP, MAP and DAP, which primarily have served as a source of raw material supply for our operations in Brazil and Argentina.

The prices of fertilizer raw materials are typically based on international prices that reflect global supply and demand factors and global transportation and other logistics costs. Each of these fertilizer raw materials is readily available in the international market from multiple sources.

Distribution and Logistics. We seek to reduce our logistics costs by back-hauling agricultural commodities and processed products from our inland locations to export points after delivery of imported fertilizer raw materials to our fertilizer blending plants. We also seek opportunities to enhance the efficiency of our logistics network by exporting agricultural commodities on the ocean freight vessels that we use to deliver imported fertilizer raw materials to us.

Competition. Competition is based on delivered price, product offering and quality, location, access to raw materials, production efficiency and customer service, including in some cases, customer financing terms. Our main competitors in our fertilizer operations in Brazil are Heringer, Fertipar, The Mosaic Company, ADM and Yara International. In Argentina, our main competitors are YPF, The Mosaic Company and Profertil S.A.

RISK MANAGEMENT

Risk management is a fundamental aspect of our business. Engaging in the hedging of risk exposures and anticipating market developments are critical to protect and enhance our return on assets. As such, we are active in derivative markets for agricultural commodities, energy, ocean freight, foreign currency and interest rates. We seek to leverage the market insights that we gain through our global operations across our businesses by actively managing our physical and financial positions on a daily basis. Our risk management decisions take place in various locations but exposure limits are centrally set and monitored. Commodity exposure limits are designed to consider notional exposure to price and relative price (or “basis”) volatility, as well as value-at-risk limits. For foreign exchange, interest rate, energy and transportation risk, our risk management decisions are made in accordance with applicable company policies. Credit and counterparty risk is managed locally within our business units and monitored centrally. We have a corporate risk management group, which oversees management of various risk exposures globally, as well as local risk managers and committees in our operating companies. The Finance and Risk Policy Committee of our Board of Directors oversees and periodically reviews our overall risk management policies and risk limits. See “Item 7A. Quantitative and Qualitative Disclosures About Market Risk.”

OPERATING SEGMENTS AND GEOGRAPHIC AREAS

We have included financial information about our reportable segments and our operations by geographic area in Note 28 of the notes to the consolidated financial statements.

INVESTMENTS IN AFFILIATES

We participate in various unconsolidated joint ventures and other investments accounted for using the equity method. Significant equity method investments at December 31, 2012 are described below. We allocate equity in earnings of affiliates to our reporting segments.

Agribusiness

PT Bumiraya Investindo. We have a 35% ownership interest in PT Bumiraya Investindo, an Indonesian palm plantation company.

Bunge-SCF Grain, LLC. We have a 50% interest in Bunge-SCF Grain, LLC, a joint venture with SCF Agri/Fuels LLC that operates grain facilities along the Mississippi river.

Caiaa – Paraguay Complejo Agroindustrial Angostura S.A. We have a 33.33% ownership interest in a joint venture with Louis Dreyfus Commodities and Aceitera General Deheza S.A. (AGD), which is constructing an oilseed processing facility in Paraguay.

Diester Industries International S.A.S. (DII). We are a party to a joint venture with Diester Industries, a subsidiary of Sofiproteol, specializing in the production and marketing of biodiesel in Europe. We have a 40% interest in DII.

Terminal 6 S.A. and Terminal 6 Industrial S.A. We have a joint venture in Argentina with AGD for the operation of the Terminal 6 port facility located in the Santa Fe province of Argentina. Bunge is also a party to a second joint venture with AGD that operates a crushing facility located adjacent to the Terminal 6 port facility. We own 40% and 50%, respectively, of these joint ventures.

Sugar and Bioenergy

Bunge-Ergon Vicksburg, LLC (BEV). We are a 50% owner of BEV along with Ergon Ethanol, Inc. BEV operates an ethanol plant at the Port of Vicksburg, Mississippi, where we operate grain elevator facilities. We recorded a \$10 million impairment charge related to our investment in BEV, reducing the investment value to zero (see Note 10 of the notes to the consolidated financial statements).

ProMaiz. We have a joint venture in Argentina with AGD for the construction and operation of a corn wet milling facility. We are a 50% owner in this joint venture.

Southwest Iowa Renewable Energy, LLC (SIRE). We are a 25% owner of SIRE. The other owners are primarily agricultural producers located in Southwest Iowa. SIRE operates an ethanol plant near our oilseed processing facility in Council Bluffs, Iowa.

Fertilizers

Bunge Maroc Phosphore S.A. We have a 50% interest in this joint venture to produce fertilizers in Morocco with OCP. The joint venture was formed to produce fertilizer products for shipment to Brazil, Argentina and certain other markets in Latin America.

RESEARCH AND DEVELOPMENT, INNOVATION, PATENTS AND LICENSES

Our research and development activities are focused on developing products and improving processes that will drive growth or otherwise add value to our core business operations. In our food and ingredients division, we have research and development centers located in the United States, Brazil and Hungary to develop and enhance technology and processes associated with food and ingredients development. Additionally, the evolution of biotechnology over the last ten years has created opportunities to develop and commercialize processes related to the transformation of oilseeds, grains and other commodities. To better take advantage of related opportunities, our global innovation activities involve scouting, developing, buying, selling and/or licensing next generation technologies in food, feed, fuel and fertilizer.

In 2012, we acquired a patent portfolio from MCN BioProducts Inc., a Canadian technology company, covering the production of value-added protein concentrates from oilseeds for the aquaculture and animal feed industries.

Our total research and development expenses were \$19 million in 2012, \$21 million in 2011 and \$22 million in 2010. As of December 31, 2012, our research and development organization consisted of 140 employees worldwide.

We own trademarks on the majority of the brands we produce in our food and ingredients and fertilizer divisions. We typically obtain long-term licenses for the remainder. We have patents covering some of our products and manufacturing processes. However, we do not consider any of these patents to be material to our business. We believe we have taken appropriate steps to either own or license all intellectual property rights that are material to carrying out our business.

SEASONALITY AND WORKING CAPITAL NEEDS

In our agribusiness segment, while there is a degree of seasonality in the growing season and procurement of our principal raw materials, such as oilseeds and grains, we typically do not experience material fluctuations in volume between the first and second half of the year since we are geographically diversified between the northern and southern hemispheres, and we sell and distribute products throughout the year. However, the first fiscal quarter of the year has in several years been our weakest in terms of financial results

due to the timing of the North and South American oilseed harvests as the North American harvest peaks in the third and fourth fiscal quarters and the South American harvest peaks in the second fiscal quarter, and thus our North and South American grain merchandising and oilseed processing activities are generally at lower levels during the first quarter.

We experience seasonality in our sugar and bioenergy division as a result of the Brazilian sugarcane growing cycle. In the Center-South of Brazil, the sugarcane harvesting period typically begins in late March and ends in early December. This creates fluctuations in our sugar and ethanol inventories, which usually peak in December to cover sales between crop harvests. As a result of the above factors, there may be significant variations in our results of operations from one quarter to another.

In our food and ingredients division, there are no significant seasonal effects on our business.

In our fertilizer division, we are subject to seasonal trends based on the South American agricultural growing cycle as farmers typically purchase the bulk of their fertilizer needs in the second half of the year.

Additionally, price fluctuations and availability of commodities may cause fluctuations in our financial results, inventories, accounts receivable and borrowings over the course of a given year. For example, increased availability of commodities at harvest times often causes fluctuations in our inventories and borrowings. Increases in agricultural commodity prices will also generally cause our cash flow requirements to increase as our operations require increased use of cash to acquire inventories and fund daily settlement requirements on exchange traded futures that we use to hedge our physical inventories.

GOVERNMENT REGULATION

We are subject to a variety of laws in each of the countries in which we operate which govern various aspects of our business, including the processing, handling, storage, transport and sale of our products; land-use and ownership of land, including laws regulating the acquisition or leasing of rural properties by certain entities and individuals; and environmental, health and safety matters. To operate our facilities, we must obtain and maintain numerous permits, licenses and approvals from governmental agencies and our facilities are subject to periodic inspection by governmental agencies. In addition, we are subject to other laws and government policies affecting the food and agriculture industries, including food and feed safety, nutritional and labeling requirements and food security policies. From time to time, agricultural production shortfalls in certain regions and growing demand for agricultural commodities for feed, food and fuel use have caused prices for soybeans, vegetable oils, sugar, corn and wheat to rise. High commodity prices and regional crop shortfalls have led, and in the future may lead, governments to impose price controls, tariffs, export restrictions and other measures designed to assure adequate domestic supplies and/or mitigate price increases in their domestic markets, as well as increase the scrutiny of competitive conditions in their markets.

In recent years, there has been increased interest globally in the production of biofuels as alternatives to traditional fossil fuels and as a means of promoting energy independence in certain countries. Biofuels convert crops, such as sugarcane, corn, soybeans, palm, rapeseed or canola and other oilseeds, into ethanol or biodiesel to extend, enhance or substitute for fossil fuels. Production of biofuels has increased significantly in recent years in response to high fossil fuel prices coupled with government incentives for the production of biofuels that are being offered in many countries, including the United States, Brazil, Argentina and many European countries. Furthermore, in certain countries, governmental authorities are mandating biofuels use in transport fuel at specified levels. As such, the markets for agricultural commodities used in the production of biofuels have become increasingly affected by the growth of the biofuel industry and related legislation.

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) was signed into law on July 21, 2010. The Dodd-Frank Act requires various federal agencies to adopt and implement a broad range of new rules and regulations, and to prepare numerous studies and reports for Congress. The Dodd-Frank Act will have a significant impact on the derivatives market, including subjecting large derivatives users, which may include us, to extensive new oversight and regulation. While it is difficult to predict at this time what specific impact the Dodd-Frank Act and related regulations will have on us, they could impose significant additional costs on us relating to derivatives transactions, including operating and compliance costs, and could materially affect the availability, as well as the cost and terms, of certain derivatives transactions.

ENVIRONMENTAL MATTERS

We are subject to various environmental protection and occupational health and safety laws and regulations in the countries in which we operate. Our operations may emit or release certain substances, which may be regulated or limited by applicable laws and regulations. In addition, we handle and dispose of materials and wastes classified as hazardous or toxic by one or more regulatory agencies. Our operations are also subject to laws relating to environmental licensing of facilities, restrictions on land-use in certain protected areas, forestry reserve requirements, limitations on the burning of sugarcane and water use. We incur costs to comply with health, safety and environmental regulations applicable to our activities and have made and expect to make substantial capital expenditures on an ongoing basis to continue to ensure our compliance with environmental laws and regulations. However, due to our extensive operations across multiple industries and jurisdictions globally, we are exposed to the risk of claims and liabilities under environmental regulations. Violation of these laws and regulations can result in substantial fines, administrative sanctions, criminal penalties, revocations of operating permits and/or shutdowns of our facilities.

Additionally, our business could be affected in the future by regulation or taxation of greenhouse gas emissions. It is difficult to assess the potential impact of any resulting regulation of greenhouse gas emissions. Potential consequences could include increased energy, transportation and raw material costs, and we may be required to make

additional investments to modify our facilities, equipment and processes. As a result, the effects of additional climate change regulatory initiatives could have adverse impacts on our business and results of operations. Compliance with environmental laws and regulations did not materially affect our earnings or competitive position in 2012.

COMPETITIVE POSITION

Markets for most of our products are highly price competitive and many are sensitive to product substitution. Please see the “Competition” section contained in the discussion of each of our operating segments above for a discussion of competitive conditions, including our primary competitors in each segment.

EMPLOYEES

As of December 31, 2012, we had approximately 36,000 employees. Many of our employees are represented by labor unions, and their employment is governed by collective bargaining agreements. In general, we consider our employee relations to be good.

RISKS OF FOREIGN OPERATIONS

We are a global business with substantial assets located outside of the United States from which we derive a significant portion of our revenue. Our operations in South America and Europe are a fundamental part of our business. In addition, a part of our strategy involves expanding our business in several emerging markets, including Eastern Europe, Asia, the Middle East and Africa. Volatile economic, political and market conditions in these and other emerging market countries may have a negative impact on our operating results and our ability to achieve our business strategies. For additional information, see the discussion under “Item 1A. Risk Factors.”

INSURANCE

In each country where we conduct business, our operations and assets are subject to varying degrees of risk and uncertainty. Bunge insures its businesses and assets in each country in a manner that it deems appropriate for a company of our size and activities, based on an analysis of the relative risks and costs. We believe that our geographic dispersion of assets helps mitigate risk to our business from an adverse event affecting a specific facility; however, if we were to incur a significant loss or liability for which we were not fully insured, it could have a materially adverse effect on our business, financial condition and results of operations.

AVAILABLE INFORMATION

Our website address is www.bunge.com. Through the “Investors: SEC Filings” section of our website, it is possible to access our periodic report filings with the Securities and Exchange Commission (SEC) pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended (the Exchange Act), including our Annual Report on Form 10-K, quarterly reports on Form 10-Q and current reports on

Form 8-K, and any amendments to those reports. These reports are made available free of charge. Also, filings made pursuant to Section 16 of the Exchange Act with the SEC by our executive officers, directors and other reporting persons with respect to our common shares are made available, free of charge, through our website. Our periodic reports and amendments and the Section 16 filings are available through our website as soon as reasonably practicable after such report, amendment or filing is electronically filed with or furnished to the SEC.

Through the “Investors: Corporate Governance” section of our website, it is possible to access copies of the charters for our Audit Committee, Compensation Committee, Finance and Risk Policy Committee and Corporate Governance and Nominations Committee. Our corporate governance guidelines and our code of ethics are also available in this section of our website. Each of these documents is made available, free of charge, through our website.

The foregoing information regarding our website and its content is for your convenience only. The information contained on or connected to our website is not deemed to be incorporated by reference in this report or filed with the SEC.

In addition, you may read and copy any materials we file with the SEC at the SEC’s Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549 and may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. The SEC maintains a website that contains reports, proxy and information statements, and other information regarding issuers that file electronically. The SEC website address is www.sec.gov.

EXECUTIVE OFFICERS AND KEY EMPLOYEES OF THE COMPANY

Set forth below is certain information concerning the executive officers and key employees of the Company.

NAME	POSITIONS
Alberto Weisser	Chairman of the Board of Directors and Chief Executive Officer
Andrew J. Burke	Chief Financial Officer and Global Operational Excellence Officer
Gordon Hardie	Managing Director, Food & Ingredients
Frank R. Jimenez	General Counsel, Secretary and Managing Director, Government Affairs, Bunge Limited
Raul Padilla	Managing Director, Bunge Global Agribusiness and Chief Executive Officer, Bunge Product Lines
D. Benedict Percy	Chief Development Officer and Managing Director, Sugar and Bioenergy
Vicente C. Teixeira	Chief Personnel Officer
Tommy Jensen	Chief Executive Officer, Bunge Europe, Middle East & Africa
Enrique Humanes	Chief Executive Officer, Bunge Argentina
Pedro Parente	President and Chief Executive Officer, Bunge Brazil
Soren Schroder	Chief Executive Officer, Bunge North America
Christopher White	Chief Executive Officer, Bunge Asia

Alberto Weisser, 57. Mr. Weisser is the Chairman of our Board of Directors and our Chief Executive Officer. Mr. Weisser has been with Bunge since July 1993. He has been a member of our Board of Directors since 1995, was appointed our Chief Executive Officer in January 1999 and became Chairman of the Board of Directors in July 1999. Prior to that, Mr. Weisser held the position of Chief Financial Officer. Prior to joining Bunge, Mr. Weisser worked for the BASF Group in various finance-related positions for 15 years. In February 2013, Bunge announced the transition of Mr. Weisser from Chairman and Chief Executive Officer to Executive Chairman effective June 1, 2013 through December 31, 2013. Mr. Weisser is also a member of the Board of Directors of Pepsico Inc., a member of the North American Agribusiness Advisory Board of Rabobank and a board member of the Council of the Americas. He is a former director of Ferro Corporation and International Paper Company. Mr. Weisser has a bachelor's degree in Business Administration from the University of São Paulo, Brazil.

Andrew J. Burke, 57. Mr. Burke has been our Chief Financial Officer since February 2011, having served as interim Chief Financial Officer since September 2010. In addition, Mr. Burke serves as our Global Operational Excellence Officer, a position he has held since July 2010. Prior to July 2010, Mr. Burke served as Chief Executive Officer of Bunge Global Agribusiness and Bunge Product Lines since November 2006. Mr. Burke joined Bunge in January 2002 as Managing Director, Soy Ingredients and New Business Development and later served as Managing Director, New Business. Mr. Burke also previously served as our interim Chief Financial Officer from April to July 2007. Prior to joining Bunge, Mr. Burke served as Chief Executive Officer of the U.S. subsidiary of Degussa AG. He joined Degussa in 1983, where he held a variety of finance and marketing positions, including Chief Financial Officer and Executive Vice President of the U.S. chemical group. Prior to joining Degussa, Mr. Burke worked for Beecham Pharmaceuticals and was an auditor with Price Waterhouse & Company. Mr. Burke is a graduate of Villanova University and earned an M.B.A. from Manhattan College.

Gordon Hardie, 49. Mr. Hardie has served as Managing Director, Food & Ingredients since July 2011. Prior to joining Bunge, Mr. Hardie founded Morningside Partners, a corporate strategy and M&A advisory firm focused on the food and beverage industries in 2009. Prior to that, from 2003 to 2009, he led the Fresh Baking Division of Goodman Fielder Ltd, the leading producer of bakery brands in Australia and New Zealand, and held leadership roles at companies in a variety of international markets, including as Group General Manager, Marketing at Southcorp Wines; Vice President, Asia Pacific, Middle East and Africa at Fosters Group International; and Regional Director, Americas & Asia Pacific at Pernod Ricard. He holds a Bachelor's degree in European Language and Psychology from the National University of Ireland, University College Cork and an M.B.A. from the University College Dublin, Michael Smurfit Graduate School of Business.

Frank R. Jimenez, 48. Mr. Jimenez has served as General Counsel, Secretary and Managing Director, Government Affairs since July 2012. Prior to joining Bunge, he was Senior Vice President, General Counsel and Corporate Secretary at Xylem Inc., a global water technology company spun off from

ITT Corporation. He joined ITT in 2009 as Vice President and General Counsel. Prior to ITT, he served for nearly three years as General Counsel of the U.S. Department of the Navy in the Bush and Obama administrations. He has held a variety of other positions in government, including Deputy General Counsel for the U.S. Department of Defense and Chief of Staff at the U.S. Department of Housing and Urban Development, as well as Deputy Chief of Staff and Acting General Counsel to Governor Jeb Bush of Florida. Mr. Jimenez previously practiced law as a partner at Steel Hector and Davis LLP (now Squire Sanders LLP) in Miami, Florida. He holds an M.B.A. from the Wharton School of the University of Pennsylvania, a J.D. from the Yale Law School, an M.A. from the U.S. Naval War College and a B.S. from the University of Miami.

Raul Padilla, 57. Mr. Padilla has served as Managing Director, Bunge Global Agribusiness and Chief Executive Officer, Bunge Product Lines since July 2010. Previously, he served as Chief Executive Officer of Bunge Argentina since 1999. He joined the company in 1997 as Commercial Director. Mr. Padilla has approximately 30 years of experience in the oilseed processing and grain handling industries in Argentina, beginning his career with La Plata Cereal in 1977. He has served as President of the Argentine National Oilseed Crushers Association, Vice President of the International Association of Seed Crushers and Director of the Buenos Aires Cereal Exchange and the Rosario Futures Exchange. Mr. Padilla is a graduate of the University of Buenos Aires.

D. Benedict Percy, 44. Mr. Percy has been our Chief Development Officer and Managing Director, Sugar and Bioenergy since February 2009. Mr. Percy joined Bunge in 1995. Prior to his current position, he was most recently based in Europe, where he served as Vice President, South East Europe since 2007 and Vice President, Eastern Europe from 2003 to 2007. Prior to that, he served as Director of Strategic Planning for Bunge Limited from 2001 to 2003. Prior to joining Bunge, Mr. Percy worked at McKinsey & Co. in the United Kingdom. He holds a B.A. in Modern History and Economics from Oxford University and an M.B.A. from Harvard Business School.

Vicente C. Teixeira, 60. Mr. Teixeira has been our Chief Personnel Officer since February 2008. Prior to joining Bunge, Mr. Teixeira served as Director of Human Resources for Latin America at Dow Chemical and Dow Agrosiences in Brazil since 2001. He joined Dow from Union Carbide, where he served as Director of Human Resources and Administration for Latin America and South Africa, starting in 1995. Previously, he had worked at Citibank in Brazil for 21 years, where he ultimately served as Human Resources Vice President for Brazil. Mr. Teixeira has an undergraduate degree in Business Communication and Publicity from Faculdade Integrada Alcantara Machado (FMU/FIAM), a Master of Business Administration from Faculdade Tancredo Neves and an Executive M.B.A. from PDG/EXEC in Brazil.

Tommy Jensen, 51. Mr. Jensen has served as Chief Executive Officer of Bunge Europe, Middle East and Africa since May 2012 and previously served as Bunge EMEA's Chief Operating Officer, Vice President, Northern and Central Europe and Managing Director, Poland. Prior to joining Bunge, he held

leadership positions at Animex S.A. in Poland, a subsidiary of Smithfield Foods, Continental Grain in Poland and Germany, and Jyske Bank A/S in Denmark. He has a Bachelor's degree in Finance from Aarhus School of Business at Aarhus University, Denmark, and has completed the Advanced Management Program at Harvard Business School.

Enrique Humanes, 53. Mr. Humanes has served as Chief Executive Officer of Bunge Argentina since February 2011 and previously served as interim Chief Executive Officer of Bunge Argentina since July 2010. He started his career at the company in 2000 as the Operations Director of Bunge Argentina. Prior to joining Bunge, he served in industrial roles at Unilever and Dow Chemical. He holds an undergraduate degree in chemical engineering from the Technology University of Rosario, a postgraduate degree in Process Management Administration from Rice University and an MBA from IDEA in Argentina.

Pedro Parente, 60. Mr. Parente has been President and Chief Executive Officer of Bunge Brazil since joining Bunge in January 2010. From 2003 until December 2009, Mr. Parente served as Chief Operating Officer of Grupo RBS (RBS), a leading Brazilian multimedia company that owns several TV stations, newspapers and radio stations. Prior to joining RBS, Mr. Parente held a variety of high-level posts in the public sector in Brazil. He served as Chief of Staff to the Brazilian President from 1999 to 2002, and as Minister of Planning and Deputy Minister of Finance between 1995 and 1999. Mr. Parente has also served as a consultant to the International Monetary Fund and has worked at the Brazilian Central Bank, Banco do Brasil and in a number of other positions in the Ministry of Finance and Ministry of Planning. He is a former Chairman of the Board of Petrobras and Banco do Brasil. He holds a degree in electrical engineering from the University of Brasília, and is a fellow at the George Washington University Center of Latin American Studies.

Soren Schroder, 51. Mr. Schroder has been the Chief Executive Officer of Bunge North America since April 2010. Previously, he served as Vice President, Agribusiness for Bunge Europe since June 2006. Prior to that, he served in agribusiness leadership roles in the U.S. and Europe. Mr. Schroder joined Bunge in 2000. In February 2013, Bunge announced the appointment of Mr. Schroder as Chief Executive Officer of Bunge effective June 1, 2013. Prior to joining Bunge, he worked for over 15 years at Continental Grain and Cargill. He holds a Bachelor's degree in Economics from Connecticut College.

Christopher White, 60. Mr. White has served as Chief Executive Officer of Bunge Asia since 2006. He joined Bunge as Regional General Manager Asia in March 2003. Over a previous 20-year career with Bristol Myers Squibb, Mr. White served in various capacities, including President of Mead Johnson Nutritionals Worldwide, President of Mead Johnson Nutritionals and Bristol Myers Consumer Products Asia, and Vice President of Finance and Strategy of Mead Johnson. Mr. White is a graduate of Yale University.

ITEM 1A. RISK FACTORS

RISK FACTORS

Our business, financial condition or results of operations could be materially adversely affected by any of the risks and uncertainties described below. Additional risks not presently known to us, or that we currently deem immaterial, may also impair our financial condition and business operations. See "Cautionary Statement Regarding Forward Looking Statements."

RISKS RELATING TO OUR BUSINESS AND INDUSTRIES

Adverse weather conditions, including as a result of future climate change, may adversely affect the availability, quality and price of agricultural commodities and agricultural commodity products, as well as our operations and operating results.

Adverse weather conditions have historically caused volatility in the agricultural commodity industry and consequently in our operating results by causing crop failures or significantly reduced harvests, which may affect the supply and pricing of the agricultural commodities that we sell and use in our business, reduce demand for our fertilizer products and negatively affect the creditworthiness of agricultural producers who do business with us.

Our sugar production depends on the volume and sucrose content of the sugarcane that we cultivate or that is supplied to us by third-party growers. Both sugarcane crop yields and sucrose content depend significantly on weather conditions, such as rainfall and prevailing temperatures, which can vary substantially. For example, droughts and other adverse weather conditions in the Center-South of Brazil in 2010 have had an effect on the sugarcane crop in the last three years, which has resulted in reduced crop yields across the region. This has reduced the supply of sugarcane available to us for processing. In addition, the sucrose content in the sugarcane ultimately harvested has also been lower, further contributing to decreased productivity and greater production costs. As such, unfavorable weather conditions have had and could in the future have a material adverse effect on our sugar operations.

Severe adverse weather conditions, such as hurricanes or severe storms, may also result in extensive property damage, extended business interruption, personal injuries and other loss and damage to us. Our operations also rely on dependable and efficient transportation services. A disruption in transportation services, as a result of weather conditions or otherwise, may also significantly adversely impact our operations.

Additionally, the potential physical impacts of climate change are uncertain and may vary by region. These potential effects could include changes in rainfall patterns, water shortages, changing sea levels, changing storm patterns and intensities, and changing temperature levels that could adversely impact our costs and business operations, the location and costs of global agricultural commodity production, and the supply and demand for agricultural commodities. These effects could be material to our results of operations, liquidity or capital resources.

We may be adversely affected by a shortage of sugarcane or by high sugarcane costs.

Sugarcane is our principal raw material used in the production of ethanol and sugar. Our ability to secure an adequate supply of sugarcane depends on our ability to negotiate and maintain satisfactory land rights and supply contracts with third parties. Currently, approximately 97% of the land we use for sugarcane cultivation is not owned by us, with such land typically managed through agricultural partnership agreements having an average remaining term of five years. We cannot guarantee that these agreements will be renewed after their respective terms or that any such renewals will be on terms and conditions satisfactory to us. A significant shortage of sugarcane supply or increase in the cost of available sugarcane, including as a result of the termination of our partnership or supply contracts or the inability to enter into alternative arrangements on economic terms, would likely have an adverse effect on our business and financial performance, and such effect could be material.

We are subject to fluctuations in agricultural commodity and other raw material prices caused by other factors outside of our control that could adversely affect our operating results.

Prices for agricultural commodities and their by-products, including, among others, soybeans, corn, wheat, sugar and ethanol, like those of other commodities, are often volatile and sensitive to local and international changes in supply and demand caused by factors outside of our control, including farmer planting decisions, government agriculture programs and policies, global inventory levels, demand for biofuels, weather and crop conditions and demand for and supply of competing commodities and substitutes. These factors may cause volatility in our operating results.

Our fertilizer business may also be adversely affected by fluctuations in the prices of agricultural commodities and fertilizer raw materials that are caused by market factors beyond our control. Increases in fertilizer prices due to higher raw material costs have in the past and could in the future adversely affect demand for our fertilizer products. Additionally, as a result of competitive conditions in our food and ingredients and fertilizer businesses, we may not be able to recoup increases in raw material costs through increases in sales prices for our products, which may adversely affect our profitability.

Fluctuations in energy prices could adversely affect our operating results.

Our operating costs and selling prices of certain of our products are sensitive to changes in energy prices. Our industrial operations utilize significant amounts of electricity, natural gas and coal, and our transportation operations are dependent upon diesel fuel and other petroleum-based products. Significant increases in the cost of these items could adversely affect our production costs and operating results.

We also sell certain biofuel products, such as ethanol and biodiesel, which are closely related to, or may be substituted

for, petroleum products. As a result, the selling prices of ethanol and biodiesel can be impacted by the selling prices of oil, gasoline and diesel fuel. In turn, the selling prices of the agricultural commodities and commodity products that we sell, such as corn and vegetable oils that are used as feedstocks for biofuels, are also sensitive to changes in the market price for biofuels, and consequently world petroleum prices as well. Therefore, a significant decrease in the price of oil, gasoline or diesel fuel could result in a significant decrease in the selling prices of ethanol, biodiesel and their raw materials, which could adversely affect our revenues and operating results. Additionally, the prices of sugar and sugarcane-based ethanol are also correlated, and, therefore, a decline in world sugar prices may also adversely affect the selling price of the ethanol we produce in Brazil.

We are subject to global and regional economic downturns and related risks.

The level of demand for our products is affected by global and regional demographic and macroeconomic conditions, including population growth rates and changes in standards of living. A significant downturn in global economic growth, or recessionary conditions in major geographic regions, may lead to reduced demand for agricultural commodities, which could adversely affect our business and results of operations.

Additionally, weak global economic conditions and adverse conditions in global financial markets, including constraints on the availability of credit, have in the past adversely affected, and may in the future adversely affect, the financial condition and creditworthiness of some of our customers, suppliers and other counterparties, which in turn may negatively impact our financial condition and results of operations. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Quantitative and Qualitative Disclosures About Market Risk” for more information.

Over the last three years, a financial crisis in Europe, triggered by a combination of factors, including high budget deficits and concerns over the sovereign creditworthiness of several European countries, has caused significant turmoil in financial and commodity markets. Despite financial assistance packages and other mitigating actions taken by European and other policymakers, uncertainty over the future of the *euro*, and worries about sovereign creditworthiness persist. Risks and ongoing concerns about the crisis in Europe have had or could have a detrimental impact on the global economic recovery, sovereign and non-sovereign debt in these countries and the financial condition of European corporations and financial institutions. They may also adversely affect consumer confidence levels and spending, which may lead to reduced demand for the products that we sell. There can be no assurance that these conditions and related market turmoil will not deteriorate. To the extent uncertainty regarding the European financial crisis and its effect on the global economic recovery continues to negatively impact consumer and business confidence, our business and results of operations could be significantly and adversely affected.

We are vulnerable to the effects of supply and demand imbalances in our industries.

Historically, the market for some of our agricultural commodities and fertilizer products has been cyclical, with periods of high demand and capacity utilization stimulating new plant investment and the addition of incremental processing or production capacity by industry participants to meet the demand. The timing and extent of this expansion may then produce excess supply conditions in the market, which, until the supply/demand balance is again restored, negatively impacts product prices and operating results. During times of reduced market demand, we may suspend or reduce production at some of our facilities. The extent to which we efficiently manage available capacity at our facilities will affect our profitability.

We are subject to economic and political instability and other risks of doing business globally and in emerging markets.

We are a global business with substantial assets located outside of the United States. Our operations in South America and Europe are a fundamental part of our business. In addition, a key part of our strategy involves expanding our business in several emerging market regions, including Eastern Europe, Asia and Africa. Volatile international economic, political and market conditions may have a negative impact on our operating results and our ability to achieve our business strategies.

Due to the international nature of our business, we are exposed to currency exchange rate fluctuations. Changes in exchange rates between the U.S. dollar and other currencies, particularly the Brazilian *real*, the Argentine *peso*, the *euro* and certain Eastern European currencies affect our revenues and expenses that are denominated in local currencies, affect farm economics in those regions and may also have a negative impact on the value of our assets located outside of the United States.

We are also exposed to other risks of international operations, including:

- adverse trade policies or trade barriers on agricultural commodities and commodity products;
- inflation and adverse economic conditions resulting from governmental attempts to reduce inflation, such as imposition of wage and price controls and higher interest rates;
- changes in laws and regulations or their interpretation or enforcement in the countries where we operate, such as tax laws, including the risk of future adverse tax regulation in the United States relating to our status as a Bermuda company;
- difficulties in enforcing agreements or judgments and collecting receivables in foreign jurisdictions;
- exchange controls or other currency restrictions and limitations on the movement of funds, such as on the remittance of dividends by subsidiaries;
- inadequate infrastructure;

- government intervention, including through expropriation, or regulation of the economy or natural resources, including restrictions on foreign ownership of land or other assets;
- the requirement to comply with a wide variety of foreign and U.S. laws and regulations that apply to international operations, including, without limitation, economic sanctions regulations, labor laws, import and export regulations, anti-corruption and anti-bribery laws, as well as other laws or regulations discussed in this “Risk Factors” section;
- challenges in maintaining an effective internal control environment with operations in multiple international locations, including language differences, varying levels of U.S. GAAP expertise in international locations and multiple financial information systems; and
- labor disruptions, civil unrest, significant political instability, wars or other armed conflict or acts of terrorism.

These risks could adversely affect our operations, business strategies and operating results.

Government policies and regulations, particularly those affecting the agricultural sector and related industries, could adversely affect our operations and profitability.

Agricultural commodity production and trade flows are significantly affected by government policies and regulations. Governmental policies affecting the agricultural industry, such as taxes, tariffs, duties, subsidies, import and export restrictions on agricultural commodities and commodity products and energy policies (including biofuels mandates), can influence industry profitability, the planting of certain crops versus other uses of agricultural resources, the location and size of crop production, whether unprocessed or processed commodity products are traded and the volume and types of imports and exports. In addition, international trade disputes can adversely affect agricultural commodity trade flows by limiting or disrupting trade between countries or regions.

Increases in prices for, among other things, food, fuel and crop inputs, such as fertilizers, have become the subject of significant discussion by governmental bodies and the public throughout the world in recent years. In some countries, this has led to the imposition of policies such as price controls, tariffs and export restrictions on agricultural commodities. Additionally, efforts to change the regulation of financial markets, including the U.S. Dodd-Frank Act, may subject large users of derivatives, such as Bunge, to extensive new oversight and regulation. Such initiatives could impose significant additional costs on us, including operating and compliance costs, and could materially affect the availability, as well as the cost and terms, of certain transactions. Future governmental policies, regulations or actions affecting our industries may adversely affect the supply of, demand for and prices of our products, restrict our ability to do business and cause our financial results to suffer.

Increases in commodity prices can increase the scrutiny to which we are subject under antitrust laws.

We are subject to antitrust and competition laws in various countries throughout the world. We cannot predict how these laws or their interpretation, administration and enforcement will change over time, particularly in periods of significant price increases in our industries. Changes or developments in antitrust laws globally, or in their interpretation, administration or enforcement, may limit our existing or future operations and growth. Increases in food and crop nutrient prices have in the past resulted in increased scrutiny of our industries under antitrust and competition laws in Europe, Brazil and other jurisdictions and increase the risk that these laws could be interpreted, administered or enforced in a manner that could affect our operations or impose liability on us in a manner that could have a material adverse effect on our operating results and financial condition.

We may not realize the anticipated benefits of acquisitions, divestitures or joint ventures.

We have been an active acquirer of other companies, and we have joint ventures with several partners. Part of our strategy involves acquisitions, alliances and joint ventures designed to expand and enhance our business. Our ability to benefit from acquisitions, joint ventures and alliances depends on many factors, including our ability to identify suitable prospects, access funding sources on acceptable terms, negotiate favorable transaction terms and successfully consummate and integrate any businesses we acquire. In addition, we may decide, from time to time, to divest certain of our assets or businesses. Our ability to successfully complete a divestiture will depend on, among other things, our ability to identify buyers that are prepared to acquire such assets or businesses on acceptable terms and to adjust and optimize our retained businesses following the divestiture.

Our acquisition or divestiture activities may involve unanticipated delays, costs and other problems. If we encounter unexpected problems with one of our acquisitions, alliances or divestitures, our senior management may be required to divert attention away from other aspects of our businesses to address these problems. Additionally, we may fail to consummate proposed acquisitions or divestitures, after incurring expenses and devoting substantial resources, including management time, to such transactions.

Acquisitions also pose the risk that we may be exposed to successor liability relating to actions by an acquired company and its management before the acquisition. The due diligence we conduct in connection with an acquisition, and any contractual guarantees or indemnities that we receive from the sellers of acquired companies, may not be sufficient to protect us from, or compensate us for, actual liabilities. A material liability associated with an acquisition could adversely affect our reputation and results of operations and reduce the benefits of the acquisition. Additionally, acquisitions involve other risks, such as differing levels of management and internal control effectiveness at the acquired entities, systems integration risks, the risk of impairment charges relating to goodwill and intangible assets recorded in connection with

acquisitions, the risk of significant accounting charges resulting from the completion and integration of a sizeable acquisition, the need to fund increased capital expenditures and working capital requirements, our ability to retain and motivate employees of acquired entities and other unanticipated problems and liabilities.

Divestitures may also expose us to potential liabilities or claims for indemnification, as we may be required to retain certain liabilities or indemnify buyers for certain matters, including environmental or litigation matters, associated with the assets or businesses that we sell. The magnitude of any such retained liability or indemnification obligation may be difficult to quantify at the time of the transaction, and its cost to us could ultimately exceed the proceeds we receive for the divested assets or businesses. Divestitures also have other inherent risks, including possible delays in closing transactions (including potential difficulties in obtaining regulatory approvals), the risk of lower-than-expected sales proceeds for the divested businesses and unexpected costs or other difficulties associated with the separation of the businesses to be sold from our information technology and other systems and management processes, including the loss of key personnel. Additionally, expected cost savings or other anticipated efficiencies or benefits from divestitures may also be difficult to achieve or maximize.

Additionally, we have several joint ventures and investments where we have limited control over governance and operations. As a result, we face certain risks, including risks related to the financial strength of the joint venture partner, the inability to implement some actions with respect to the joint venture's activities that we may believe are favorable if the joint venture partner does not agree and the risk that we will be unable to resolve disputes with the joint venture partner. As a result, these investments may contribute significantly less than anticipated to our earnings and cash flow.

We are subject to food and feed industry risks.

We are subject to food and feed industry risks which include, but are not limited to, spoilage, contamination, tampering or other adulteration of products, product recalls, government regulation, including regulations regarding food and feed safety, trans-fatty acids and genetically modified organisms (GMOs), shifting customer and consumer preferences and concerns, and potential product liability claims. These matters could adversely affect our business and operating results.

In addition, certain of our products are used as, or as ingredients in, livestock and poultry feed, and as such, we are subject to demand risks relating to the outbreak of disease associated with livestock and poultry, including avian or swine influenza. A severe or prolonged decline in demand for our products as a result of the outbreak of disease could have a material adverse effect on our business and operating results.

We face intense competition in each of our businesses.

We face significant competition in each of our businesses and we have numerous competitors, some of which are larger and have greater financial resources than we have. As many of the

products we sell are global commodities, the markets for our products are highly price competitive and in many cases sensitive to product substitution. In addition, to compete effectively, we must continuously focus on improving efficiency in our production and distribution operations, as well as developing and maintaining appropriate market share, and customer relationships. Competition could cause us to lose market share, exit certain lines of business, increase marketing or other expenditures or reduce pricing, each of which could have an adverse effect on our business and profitability.

We are subject to environmental, health and safety regulation in numerous jurisdictions. We may be subject to substantial costs, liabilities and other adverse effects on our business relating to these matters.

Our operations are regulated by environmental, health and safety laws and regulations in the countries where we operate, including those governing the labeling, use, storage, discharge and disposal of hazardous materials. These laws and regulations require us to implement procedures for the handling of hazardous materials and for operating in potentially hazardous conditions, and they impose liability on us for the cleanup of environmental contamination. In addition to liabilities arising out of our current and future operations for which we have ongoing processes to manage compliance with regulatory obligations, we may be subject to liabilities for past operations at current facilities and in some cases to liabilities for past operations at facilities that we no longer own or operate. We may also be subject to liabilities for operations of acquired companies. We may incur material costs or liabilities to comply with environmental, health and safety requirements. In addition, our industrial activities can result in serious accidents that could result in personal injuries, facility shutdowns, reputational harm to our business and/or the expenditure of significant amounts to remediate safety issues or repair damaged facilities.

In addition, continued government and public emphasis in countries where we operate on environmental issues, including climate change, conservation and natural resource management, have resulted in and could result in new or more stringent forms of regulatory oversight of our industries, including increased environmental controls, land-use restrictions affecting us or our suppliers and other conditions that could have a material adverse effect on our business, financial condition and results of operations. For example, certain aspects of Bunge's business and the larger food production chain generate carbon emissions. The imposition of regulatory restrictions on greenhouse gas emissions, which may include limitations on greenhouse gas emissions, other restrictions on industrial operations, taxes or fees on greenhouse gas emissions and other measures, could affect land-use decisions, the cost of agricultural production and the cost and means of processing and transport of our products, which could adversely affect our business, cash flows and results of operations.

We are exposed to credit and counterparty risk relating to our customers in the ordinary course of business. In particular, we advance significant capital and provide other financing arrangements to farmers in Brazil and, as a result, our business and financial results may be adversely affected if these farmers are unable to repay the capital advanced to them.

We have various credit terms with customers, and our customers have varying degrees of creditworthiness, which exposes us to the risk of nonpayment or other default under our contracts and other arrangements with them. In the event that we experience significant defaults on their payment obligations to us, our financial condition, results of operations or cash flows could be materially and adversely affected.

In Brazil, where there are limited third-party financing sources available to farmers for their annual production of crops, we provide financing services to farmers from whom we purchase soybeans and other agricultural commodities through prepaid commodity purchase contracts and advances, which are generally intended to be short-term in nature and are typically secured by the farmer's crop and a mortgage on the farmer's land and other assets to provide a means of repayment in the potential event of crop failure or shortfall. At December 31, 2012 and 2011, respectively, we had approximately \$885 million and \$782 million in outstanding prepaid commodity purchase contracts and advances to farmers. We are exposed to the risk that the underlying crop will be insufficient to satisfy a farmer's obligation under the financing arrangements as a result of weather and crop growing conditions, and other factors that influence the price, supply and demand for agricultural commodities. In addition, any collateral held by us as part of these financing transactions may not be sufficient to fully protect us from loss.

We also sell fertilizer on credit to farmers in Brazil. These credit sales are also typically secured by the farmer's crop. At December 31, 2012 and 2011, respectively, our total fertilizer accounts receivable in Brazil were \$203 million and \$408 million. During 2012, approximately 35% of our fertilizer sales were made on credit. Furthermore, in connection with our fertilizer sales, we issue guarantees to a financial institution in Brazil related to amounts owed the institution by certain of our farmer customers. For additional information on these guarantees, see Note 22 to our consolidated financial statements included as part of this Annual Report on Form 10-K. In the event that the customers default on their obligations to either us or the financial institution under these financing arrangements, we would be required to recognize the associated bad debt expense or perform under the guarantees, as the case may be. Significant defaults by farmers under these financial arrangements could adversely affect our financial condition, cash flows and results of operations.

We are a capital intensive business and depend on cash provided by our operations as well as access to external financing to operate and expand our business.

We require significant amounts of capital to operate our business and fund capital expenditures. In addition, our working capital needs are directly affected by the prices of

agricultural commodities, with increases in commodity prices generally causing increases in our borrowing levels. We are also required to make substantial capital expenditures to maintain, upgrade and expand our extensive network of storage facilities, processing plants, refineries, mills, logistics assets and other facilities to keep pace with competitive developments, technological advances and safety and environmental standards. Furthermore, the expansion of our business and pursuit of acquisitions or other business opportunities may require us to have access to significant amounts of capital. If we are unable to generate sufficient cash flows or raise sufficient external financing on attractive terms to fund these activities, including as a result of a tightening in the global credit markets, we may be forced to limit our operations and growth plans, which may adversely impact our competitiveness and, therefore, our results of operations.

As of December 31, 2012, we had approximately \$3,361 million unused and available borrowing capacity under various committed short and long-term credit facilities and \$5,849 million in total indebtedness. Our indebtedness could limit our ability to obtain additional financing, limit our flexibility in planning for, or reacting to, changes in the markets in which we compete, place us at a competitive disadvantage compared to our competitors that are less leveraged than we are and require us to dedicate more cash on a relative basis to servicing our debt and less to developing our business. This may limit our ability to run our business and use our resources in the manner in which we would like. Furthermore, difficult conditions in global credit or financial markets generally could adversely impact our ability to refinance maturing debt or the cost or other terms of such refinancing, as well as adversely affect the financial position of the lenders with whom we do business, which may reduce our ability to obtain financing for our operations. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations – Liquidity and Capital Resources.”

Our credit ratings are important to our liquidity. While our debt agreements do not have any credit rating downgrade triggers that would accelerate the maturity of our debt, a reduction in our credit ratings would increase our borrowing costs and, depending on their severity, could impede our ability to obtain credit facilities or access the capital markets in the future on favorable terms. We may also be required to post collateral or provide third-party credit support under certain agreements as a result of such downgrades. A significant increase in our borrowing costs could impair our ability to compete effectively in our business relative to competitors with higher credit ratings.

Our risk management strategies may not be effective.

Our business is affected by fluctuations in agricultural commodity prices, transportation costs, energy prices, interest rates and foreign currency exchange rates. We engage in hedging transactions to manage these risks. However, our exposures may not always be fully hedged and our hedging strategies may not be successful in minimizing our exposure to these fluctuations. In addition, our risk management strategies may seek to position our overall portfolio relative to expected market movements. While we have implemented a broad range

of control procedures and policies to mitigate potential losses, they may not in all cases successfully protect us from losses that have the potential to impair our financial position. See “Item 7A. Quantitative and Qualitative Disclosures About Market Risk.”

We may not be able to achieve the efficiencies, savings and other benefits anticipated from our cost reduction, margin improvement and other business optimization initiatives.

We are continually implementing programs throughout the company to reduce costs, increase efficiencies and enhance our business. Initiatives currently in process or implemented in the past year include the outsourcing of certain administrative activities in several regions and the rationalization of manufacturing operations, including the closing of facilities and the implementation of a restructuring and consolidation of our operations in Brazil. Unexpected delays, increased costs, adverse effects on our internal control environment, inability to retain and motivate employees or other challenges arising from these initiatives could adversely affect our ability to realize the anticipated savings or other intended benefits of these activities.

The loss of or a disruption in our manufacturing and distribution operations or other operations and systems could adversely affect our business.

We are engaged in manufacturing and distribution activities on a global scale, and our business depends on our ability to execute and monitor, on a daily basis, a significant number of transactions across numerous markets or geographies in many currencies. As a result, we are subject to the risks inherent in such activities, including industrial accidents, environmental events, fires, explosions, strikes and other labor or industrial disputes and disruptions in logistics or information systems, as well as natural disasters, pandemics, acts of terrorism and other external factors over which we have no control. While we insure ourselves against many of these types of risks in accordance with industry standards, our level of insurance may not cover all losses. The loss of, or damage to, any of our facilities could have a material adverse effect on our business, results of operations and financial condition.

Our information technology systems, processes, and sites may suffer interruptions or failures which may affect our ability to conduct our business.

Our information technology systems, some of which are dependent on services provided by third parties, provide critical data connectivity, information and services for internal and external users. These functions include, but are not limited to, ordering and managing materials from suppliers, converting raw materials to finished products, inventory management, shipping products to customers, processing transactions, summarizing and reporting results of operations, human resources benefits and payroll management, complying with regulatory, legal or tax requirements, and other processes necessary to manage the business. We have put in place security measures to protect against cyber-based attacks and disaster recovery plans for our critical systems. However, if our information technology systems are breached, damaged, or fail

to function properly due to any number of causes, such as implementation difficulties, catastrophic events, power outages, security breaches, or cyber-based attacks, and our contingency or disaster recovery plans do not effectively mitigate these occurrences on a timely basis, we may suffer interruptions in the ability to manage our operations and damage to our reputation, which may adversely impact our business, results of operations and financial condition.

RISKS RELATING TO OUR COMMON SHARES

We are a Bermuda company, and it may be difficult for you to enforce judgments against us and our directors and executive officers.

We are a Bermuda exempted company. As a result, the rights of holders of our common shares will be governed by Bermuda law and our memorandum of association and bye-laws. The rights of shareholders under Bermuda law may differ from the rights of shareholders of companies or corporations incorporated in other jurisdictions, including the United States. A majority of our directors and some of our officers are non-residents of the United States, and a substantial portion of our assets and the assets of those directors and officers are located outside the United States. As a result, it may be difficult for you to effect service of process on those persons in the United States or to enforce in the U.S. judgments obtained in U.S. courts against us or those persons based on civil liability provisions of the U.S. securities laws. It is doubtful whether courts in Bermuda will enforce judgments obtained in other jurisdictions, including the United States, against us or our directors or officers under the securities laws of those jurisdictions or entertain actions in Bermuda against us or our directors or officers under the securities laws of other jurisdictions.

Our bye-laws restrict shareholders from bringing legal action against our officers and directors.

Our bye-laws contain a broad waiver by our shareholders of any claim or right of action, both individually and on our behalf, against any of our officers or directors. The waiver applies to any action taken by an officer or director, or the failure of an officer or director to take any action, in the performance of his or her duties, except with respect to any matter involving any fraud or dishonesty on the part of the officer or director. This waiver limits the right of shareholders to assert claims against our officers and directors unless the act, or failure to act, involves fraud or dishonesty.

We have anti-takeover provisions in our bye-laws that may discourage a change of control.

Our bye-laws contain provisions that could make it more difficult for a third party to acquire us without the consent of our Board of Directors. These provisions provide for:

- a classified board of directors with staggered three-year terms;
- directors to be removed without cause at any special general meeting only upon the affirmative vote of at least 66% of all votes attaching to all shares then in issue entitling the holder to attend and vote on the resolution;

- restrictions on the time period in which directors may be nominated;
- our Board of Directors to determine the powers, preferences and rights of our preference shares and to issue the preference shares without shareholder approval; and
- an affirmative vote of at least 66% of all votes attaching to all shares then in issue entitling the holder to attend and vote on the resolution for some business combination transactions, which have not been approved by our Board of Directors.

These provisions, as well as any additional anti-takeover measures our Board of Directors could adopt in the future, could make it more difficult for a third party to acquire us, even if the third party's offer may be considered beneficial by many shareholders. As a result, shareholders may be limited in their ability to obtain a premium for their shares.

We may become a passive foreign investment company, which could result in adverse U.S. tax consequences to U.S. investors.

Adverse U.S. federal income tax rules apply to U.S. investors owning shares of a "passive foreign investment company," or PFIC, directly or indirectly. We will be classified as a PFIC for U.S. federal income tax purposes if 50% or more of our assets, including goodwill (based on an annual quarterly average), are passive assets, or 75% or more of our annual gross income is derived from passive assets. The calculation of goodwill will be based, in part, on the then-market value of our common shares, which is subject to change. Based on certain estimates of our gross income and gross assets and relying on certain exceptions in the applicable U.S. Treasury regulations, we do not believe that we are currently a PFIC. Such a characterization could result in adverse U.S. tax consequences to U.S. investors in our common shares. In particular, absent an election described below, a U.S. investor would be subject to U.S. federal income tax at ordinary income tax rates, plus a possible interest charge, in respect of gain derived from a disposition of our common shares, as well as certain distributions by us. In addition, a step-up in the tax basis of our common shares would not be available upon the death of an individual shareholder, and the preferential U.S. federal income tax rates generally applicable to dividends on our common shares held by certain U.S. investors would not apply. Since PFIC status is determined on an annual basis and will depend on the composition of our income and assets and the nature of our activities from time to time, we cannot assure you that we will not be considered a PFIC for the current or any future taxable year. If we are treated as a PFIC for any taxable year, U.S. investors may desire to make an election to treat us as a "qualified electing fund" with respect to shares owned (a QEF election), in which case U.S. investors will be required to take into account a pro rata share of our earnings and net capital gain for each year, regardless of whether we make any distributions. As an alternative to the QEF election, a U.S. investor may be able to make an election to "mark-to-market" our common shares each taxable year and recognize ordinary income pursuant to such election based upon increases in the value of our common shares.

ITEM 1B. UNRESOLVED STAFF COMMENTS

Not applicable.

ITEM 2. PROPERTIES

The following tables provide information on our principal operating facilities as of December 31, 2012.

FACILITIES BY DIVISION

(metric tons)	AGGREGATE DAILY PRODUCTION CAPACITY	AGGREGATE STORAGE CAPACITY
Division		
Agribusiness	138,296	19,198,418
Sugar and Bioenergy	102,250	747,086
Food and Ingredients	64,231	1,543,827
Fertilizer ⁽¹⁾	40,600	1,896,157

FACILITIES BY GEOGRAPHIC REGION

(metric tons)	AGGREGATE DAILY PRODUCTION CAPACITY	AGGREGATE STORAGE CAPACITY
Region		
North America	69,072	7,570,560
South America ⁽¹⁾	206,985	12,380,800
Europe	42,583	2,633,095
Asia	26,737	801,033

(1) Includes 34,595MT of productive capacity and 1,196,760MT of storage capacity associated with our discontinued operations.

Our corporate headquarters in White Plains, New York, occupies approximately 66,300 square feet of space under a lease that expires in March 2020. We also lease other office space for our operations worldwide.

We believe that our facilities are adequate to address our operational requirements.

Agribusiness

In our agribusiness operations, we have 208 commodity storage facilities globally that are located close to agricultural production areas or export locations. We also have 52 oilseed processing plants globally. We have 66 merchandising and distribution offices throughout the world.

Sugar and Bioenergy

In our sugar and bioenergy operations, we have eight sugarcane mills, all of which are located in Brazil within close proximity to sugarcane production areas. We also manage land

through agricultural partnership agreements for the cultivation of sugarcane as described under “Business – Sugar and Bioenergy.”

Food and Ingredients

In our food and ingredients operations, we have 94 refining, packaging and milling facilities throughout the world. In addition, to facilitate distribution in Brazil, we have 23 distribution centers.

Fertilizer

In our fertilizer division, we operate 26 fertilizer processing and blending plants that are strategically located in the key fertilizer consumption regions of Brazil and Argentina, thereby reducing transportation costs to deliver our products to our customers. Of these facilities, 20 are associated with the Brazilian blending and distribution business that we have agreed to sell.

ITEM 3. LEGAL PROCEEDINGS

We are party to various legal proceedings in the ordinary course of our business. Although we cannot accurately predict the amount of any liability that may ultimately arise with respect to any of these matters, we make provision for potential liabilities when we deem them probable and reasonably estimable. These provisions are based on current information and legal advice and are adjusted from time to time according to developments. We do not expect the outcome of these proceedings, net of established reserves, to have a material adverse effect on our financial condition or results of operations. Due to their inherent uncertainty, however, there can be no assurance as to the ultimate outcome of current or future litigation, proceedings, investigations or claims.

We are subject to income and other taxes in both the United States and foreign jurisdictions and we are regularly under audit by tax authorities. Although we believe our tax estimates are reasonable, the final determination of tax audits and any related litigation or other proceedings could be materially different than that which is reflected in our tax provisions and accruals, which could have a material effect on our income tax provision and net income in the period or periods for which that determination is made. For example, our Brazilian subsidiaries are regularly audited and subject to numerous pending tax claims by Brazilian federal, state and local tax authorities. We have reserved an aggregate \$62 million as of December 31, 2012 in respect of these claims. The Brazilian tax claims relate to income tax claims, value-added tax claims and sales tax claims. The determination of the manner in which various Brazilian federal, state and municipal taxes apply to our operations is subject to varying interpretations arising from the complex nature of Brazilian tax laws and changes in those laws. In addition, we have numerous claims pending against Brazilian federal, state and local tax authorities to recover taxes previously paid by us. For more information, see Notes 14 and

22 to our consolidated financial statements included as part of this Annual Report on Form 10-K.

The Argentine tax authorities have been conducting a review of income and other taxes paid by exporters and processors of cereals and other agricultural commodities in the country. In that regard, in October 2010, the Argentine tax authorities carried out inspections at several of our locations in Argentina relating to allegations of income tax evasion covering the periods from 2007 to 2009. In December 2012, our Argentine subsidiary received an income tax assessment relating to fiscal years 2006 and 2007 with a claim of approximately 436 million pesos (approximately \$89 million as of December 31, 2012), plus accrued interest of approximately 593 million pesos (approximately \$121 million as of December 31, 2012). Our Argentine subsidiary has appealed this assessment before the National Tax Court. Additionally, in April 2011, the Argentine tax authorities conducted inspections of our locations and those of several other grain exporters with respect to allegations of evasion of liability for value-added taxes and an inquest proceeding has been initiated in the first quarter of 2012 to determine whether there is any potential criminal culpability relating to these matters. Also during 2011, we paid \$112 million of accrued export tax obligations in Argentina under protest while reserving all of our rights in respect of such payment. In the first quarter of 2012, the Argentine tax authorities assessed us interest on these paid export taxes in an amount totaling approximately \$80 million. Additionally, in April 2012, the Argentine government suspended our Argentine subsidiary from a registry of grain traders and, in October 2012, the government excluded our subsidiary from this registry in connection with the income tax allegations. These actions primarily result in additional administrative requirements and increased logistical costs on domestic grain shipments within Argentina. While the suspension and exclusion have not had a material adverse effect on our business in Argentina, we are challenging the exclusion from the grain registry in the Argentine courts. Management believes that these tax-related allegations and claims are without merit and intends to vigorously defend against them. However, management is, at this time, unable to predict their outcome.

We are a party to a large number of labor claims relating to our Brazilian operations. We have reserved an aggregate of \$68 million as of December 31, 2012 in respect of these claims. The labor claims primarily relate to dismissals, severance, health and safety, salary adjustments and supplementary retirement benefits.

We are also a party to a large number of civil and other claims relating to our Brazilian operations. We have reserved an aggregate of \$89 million as of December 31, 2012 in respect of these claims. These claims relate to various disputes with third parties including suppliers and customers and includes \$27 million related to a legacy environmental claim in Brazil, which was recorded in the first quarter of 2012.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

(a) Market Information

Our common shares trade on the New York Stock Exchange under the ticker symbol "BG." The following table sets forth, for the periods indicated, the high and low closing prices of our common shares, as reported on the New York Stock Exchange.

(US\$)	HIGH	LOW
2013		
First quarter (to February 21, 2013)	\$79.92	\$72.12
2012		
Fourth quarter	\$73.82	\$67.74
Third quarter	67.30	60.82
Second quarter	69.73	57.83
First quarter	68.44	57.22
2011		
Fourth quarter	\$63.02	\$55.51
Third quarter	73.08	56.10
Second quarter	75.44	65.42
First quarter	74.45	65.39
2010		
Fourth quarter	\$65.52	\$57.45
Third quarter	61.61	46.29
Second quarter	61.85	47.19
First quarter	71.29	56.90

(b) Approximate Number of Holders of Common Stock

To our knowledge, based on information provided by Computershare Investor Services LLC, our transfer agent, as of December 31, 2012, we had 146,348,499 common shares outstanding which were held by approximately 119 registered holders.

(c) Dividends

We intend to pay cash dividends to holders of our common shares on a quarterly basis. In addition, holders of our 4.875% cumulative convertible perpetual preference shares are entitled to annual dividends per share in the amount of \$4.875 per year payable quarterly when, as and if declared by the Board of Directors in accordance with the terms of these shares. Any future determination to pay dividends will, subject to the provisions of Bermuda law, be at the discretion of our Board of Directors and will depend upon then existing conditions, including our financial condition, results of operations, contractual and other relevant legal or regulatory restrictions, capital requirements, business prospects and other factors our Board of Directors deems relevant.

Under Bermuda law, a company's board of directors may not declare or pay dividends from time to time if there are reasonable grounds for believing that the company is, or would after the payment be, unable to pay its liabilities as they become due or that the realizable value of its assets would thereby be less than the aggregate of its liabilities and issued share capital and share premium accounts. Under our bye-laws, each common share is entitled to dividends if, as and when dividends are declared by our Board of Directors, subject to any preferred dividend right of the holders of any preference shares. There are no restrictions on our ability to transfer funds (other than funds denominated in Bermuda dollars) in or out of Bermuda or to pay dividends to U.S. residents who are holders of our common shares.

We paid quarterly dividends on our common shares of \$0.25 per share in the first two quarters of 2012 and \$0.27 per share

in the last two quarters of 2012. We paid quarterly dividends on our common shares of \$0.23 per share in the first two quarters of 2011 and \$0.25 per share in the last two quarters of 2011. We have declared a regular quarterly cash dividend of \$0.27 per share payable on March 4, 2013 to shareholders of record on February 15, 2013.

(d) Securities Authorized for Issuance Under Equity Compensation Plans

The following table sets forth certain information, as of December 31, 2012, with respect to our equity compensation plans.

Plan category	(a) NUMBER OF SECURITIES TO BE ISSUED UPON EXERCISE OF OUTSTANDING OPTIONS, WARRANTS AND RIGHTS	(b) WEIGHTED-AVERAGE EXERCISE PRICE PER SHARE OF OUTSTANDING OPTIONS, WARRANTS AND RIGHTS	(c) NUMBER OF SECURITIES REMAINING AVAILABLE FOR FUTURE ISSUANCE UNDER EQUITY COMPENSATION PLANS (EXCLUDING SECURITIES REFLECTED IN COLUMN (A))
Equity compensation plans approved by shareholders ⁽¹⁾	7,107,252 ⁽²⁾	\$65.59 ⁽³⁾	5,971,129 ⁽⁴⁾
Equity compensation plans not approved by shareholders ⁽⁵⁾	14,558 ⁽⁶⁾	— ⁽⁷⁾	— ⁽⁸⁾
Total	7,121,810	\$65.59	5,971,129

(1) Includes our 2009 Equity Incentive Plan, Equity Incentive Plan, Non-Employee Directors' Equity Incentive Plan and 2007 Non-Employee Directors' Equity Incentive Plan.

(2) Includes non-statutory stock options outstanding as to 5,534,219 common shares, performance-based restricted stock unit awards outstanding as to 1,308,907 common shares and 3,758 vested and deferred restricted stock units outstanding (including, for all restricted and deferred restricted stock unit awards outstanding, dividend equivalents payable in common shares) under our 2009 Equity Incentive Plan and Equity Incentive Plan. This number also includes non-statutory stock options outstanding as to 207,600 common shares under our Non-Employee Directors' Equity Incentive Plan, 51,804 unvested restricted stock units and 964 vested deferred restricted stock units (including, for all restricted and deferred restricted stock unit awards outstanding, dividend equivalents payable in common shares) outstanding under our 2007 Non-Employee Directors' Equity Incentive Plan. Dividend equivalent payments that are credited to each participant's account are paid in our common shares at the time an award is settled. Vested deferred restricted stock units are paid at the time the applicable deferral period lapses.

(3) Calculated based on non-statutory stock options outstanding under our 2009 Equity Incentive Plan, Equity Incentive Plan and our Non-Employee Directors' Equity Incentive Plan. This number excludes outstanding time-based restricted stock unit and performance-based restricted stock unit awards under the 2009 Equity Incentive Plan and Equity Incentive Plan and restricted and deferred restricted stock unit awards under the 2007 Non-Employee Directors' Equity Incentive Plan.

(4) Includes dividend equivalents payable in common shares. Shares available under our 2009 Equity Incentive Plan may be used for any type of award authorized under the plan. Awards under the plan may be in the form of statutory or non-statutory stock options, restricted stock units (including performance-based) or other awards that are based on the value of our common shares. Our 2009 Equity Incentive Plan provides that the maximum number of common shares issuable under the plan is 10,000,000, subject to adjustment in accordance with the terms of the plan. This number also includes shares available for future issuance under our 2007 Non-Employee Directors' Equity Incentive Plan. Our 2007 Non-Employee Directors' Equity Incentive Plan provides that the maximum number of common shares issuable under the plan may not exceed 600,000, subject to adjustment in accordance with the terms of the plan. No additional awards may be granted under the Equity Incentive Plan and the Non-Employee Directors' Equity Incentive Plan.

(5) Includes our Non-Employee Directors' Deferred Compensation Plan.

(6) Includes rights to acquire 14,558 common shares under our Non-Employee Directors' Deferred Compensation Plan pursuant to elections by our non-employee directors.

(7) Not applicable.

(8) Our Non-Employee Directors' Deferred Compensation Plan does not have an explicit share limit.

(e) Performance Graph

The performance graph shown below compares the quarterly change in cumulative total shareholder return on our common shares with the Standard & Poor's (S&P) 500 Stock Index and the S&P Food Products Index from December 31, 2007 through

the quarter ended December 31, 2012. The graph sets the beginning value of our common shares and the Indices at \$100, and assumes that all dividends are reinvested. All Index values are weighted by the capitalization of the companies included in the Index.

Comparison of 5 Year Cumulative Total Return Assumes Initial Investment of \$100 December 2012

(f) Purchases of Equity Securities by Registrant and Affiliated Purchasers

On December 5, 2012, our Board of Directors approved a \$275 million increase to our existing share repurchase program and extended the term of the program indefinitely. Under the expanded program, which was originally established in June 2010, we are authorized to purchase up to \$975 million of our common shares. As of December 31, 2012, we had repurchased approximately \$474 million of our common shares, leaving approximately \$500 million available for future share

repurchases under the program. No shares were repurchased during 2012.

Any repurchases may be made from time to time through a variety of means, including in the open market, in privately negotiated transactions or through other means as determined by us, and in compliance with applicable legal requirements. The timing and number of any shares repurchased will depend on a variety of factors, including share price and market conditions, and the program may be suspended or discontinued at any time at our discretion.

ITEM 6. SELECTED FINANCIAL DATA

The following table sets forth our selected historical consolidated financial information for each of the five periods indicated. You should read this information together with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and with the consolidated financial statements and notes to the consolidated financial statements included elsewhere in this Annual Report on Form 10-K.

Our consolidated financial statements are prepared in U.S. dollars and in accordance with U.S. GAAP. The selected historical financial information as of December 31, 2012, 2011, 2010, 2009 and 2008 and for the years ended December 31,

2012, 2011, 2010, 2009 and 2008 are derived from our audited consolidated financial statements and related notes. In December 2012, we announced our entry into an agreement to sell our Brazilian fertilizer distribution business and we sold our North American fertilizer joint venture interest to our joint venture partner. As a result, the results of these businesses have been classified as discontinued operations for all periods presented below. Activities of the fertilizer segment reported in continuing operations include our port operations in Brazil and our fertilizer production operations in Argentina. Additionally, we have retained our 50% interest in our fertilizer joint venture in Morocco.

US\$ in millions	YEAR ENDED DECEMBER 31,				
	2012	2011	2010	2009	2008
Consolidated Statements of Income Data:					
Net sales	\$ 60,991	\$ 56,097	\$ 43,953	\$ 39,601	\$ 48,956

(1) Earnings per common share-basic is computed by dividing net income available to common shareholders by the weighted-average number of common shares outstanding for the period.

(2) Bunge's outstanding 862,455 5.125% cumulative mandatory convertible preference shares were mandatorily converted into Bunge common shares on December 1, 2010. The annual dividend on each mandatory convertible preference share was \$51.25, payable quarterly. Each mandatory convertible preference share automatically converted on December 1, 2010 at a conversion rate of 9.7596 per share for a total of 8,417,215 of Bunge common shares. Bunge has 6,900,000 4.875% cumulative convertible perpetual preference shares outstanding. Each cumulative convertible preference share has an initial liquidation preference of \$100 per share plus accumulated and unpaid dividends up to a maximum of an additional \$25 per share. As a result of adjustments made to the initial conversion price because cash dividends paid on Bunge Limited's common shares exceeded certain specified thresholds, each cumulative convertible preference share is convertible, at the holder's option, at any time, into approximately 1.1059 Bunge Limited common shares (7,630,710 Bunge Limited common shares), subject to certain additional anti-dilution adjustments.

(3) Included in inventories were readily marketable inventories of \$5,306 million, \$4,075 million, \$4,851 million, \$3,380 million, and \$2,741 million at December 31, 2012, 2011, 2010, 2009 and 2008, respectively. Readily marketable inventories are agricultural commodity inventories that are readily convertible to cash because of their commodity characteristics, widely available markets and international pricing mechanisms.

(4) Amounts for 2010, 2009 and 2008 have not been adjusted for the change in presentation discussed in Note 1 to the consolidated financial statements - *Basis of Presentation*.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following should be read in conjunction with "Cautionary Statement Regarding Forward Looking Statements" and our combined consolidated financial statements and notes thereto included in Item 15 of this Annual Report on Form 10-K.

OPERATING RESULTS

FACTORS AFFECTING OPERATING RESULTS

Bunge Limited, a Bermuda company, together with its subsidiaries, is a leading global agribusiness and food

company operating in the farm-to-consumer food chain. The commodity nature of the Company's principal products, as well as regional and global supply and demand variations that occur as an inherent part of the business, make volumes an important operating measure. Accordingly, volume information is included in the table that summarizes certain items in our consolidated statements of income and volumes by reportable segment. The unit of measure for all reported volumes is metric tons, a common unit of measure within our industry. A description of reported volumes for each reportable segment has also been included in the discussion of key factors affecting results of operations in each of our business segments as discussed below.

Agribusiness

In the agribusiness segment, we purchase, store, transport, process and sell agricultural commodities and commodity products. Profitability in this segment is affected by the availability and market prices of agricultural commodities and processed commodity products and the availability and costs of energy, transportation and logistics services. Profitability in our oilseed processing operations is also impacted by volumes procured, processed and sold and by capacity utilization rates. Availability of agricultural commodities is affected by many factors, including weather, farmer planting decisions, plant disease, governmental policies and agricultural sector economic conditions. Reported volumes in this segment primarily reflect (1) grains and oilseeds originated from farmers, cooperatives or other aggregators and from which “origination margins” are earned; (2) oilseeds processed in our oilseed processing facilities and from which “crushing margins” are earned—representing the margin resulting from the industrial separation of the oilseed into its protein meal and vegetable oil components, both of which components are separate commodity products themselves; and (3) third party sales of grains, oilseeds and related commodity products merchandised through our distribution businesses and from which “distribution margins” are earned. The foregoing sub-segment volumes may overlap as they produce separate margin capture opportunities. For example, oilseeds procured in our South American grain origination activities may be processed in our oilseed processing facilities in Asia and will be reflected at both points within the segment. As such, these reported volumes do not represent solely volumes of net sales to third parties, but rather where margin is earned, appropriately reflecting their contribution to our global network’s capacity utilization and profitability.

Demand for our purchased and processed agribusiness products is affected by many factors, including global and regional economic conditions, changes in per capita incomes, the financial condition of customers and customer access to credit, worldwide consumption of food products, particularly pork and poultry, population growth rates, relative prices of substitute agricultural products, outbreaks of disease associated with livestock and poultry, and demand for renewable fuels produced from agricultural commodities and commodity products.

We expect that the factors described above will continue to affect global supply and demand for our agribusiness products for the foreseeable future. We also expect that, from time to time, imbalances will likely exist between oilseed processing capacity and demand for oilseed products in certain regions, which impacts our decisions regarding whether, when and where to purchase, store, transport, process or sell these commodities, including whether to change the location of or adjust our own oilseed processing capacity.

Sugar and Bioenergy

Our sugar and bioenergy segment is an integrated business which includes the procurement and growing of sugarcane and the production of sugar, ethanol and electricity in our eight mills in Brazil, five of which were acquired in February 2010 in

the Moema acquisition, global sugar trading and merchandising activities and minority interests in U.S. corn-based ethanol producers.

Profitability in this segment is affected by the availability and quality of sugarcane, which impact our capacity utilization rates and the amount of sugar that can be extracted from the sugarcane, and by market prices of sugarcane, sugar and ethanol. Availability and quality of sugarcane is affected by many factors, including weather, geographical factors such as soil quality and topography, and agricultural practices. Once planted, sugarcane may be harvested for several continuous years, but the usable crop decreases with each subsequent harvest. As a result, the current optimum economic cycle is generally five or six consecutive harvests, depending on location. We own and/or have partnership agreements to manage farmland on which we grow and harvest sugarcane. We also purchase sugarcane from third parties. Prices of sugarcane in Brazil are established by Consecana, the São Paulo state sugarcane and sugar and ethanol council, and are based on the sucrose content of the cane and the market prices of sugar and ethanol. Demand for our products is affected by such factors as changes in global or regional economic conditions, the financial condition of customers and customer access to credit, worldwide consumption of food products, population growth rates, changes in per capita incomes and demand for and governmental support of renewable fuels produced from agricultural commodities, including sugarcane. We expect that these factors will continue to affect supply and demand for our sugar and bioenergy products in the foreseeable future. Reported volumes in this segment reflect third-party sales of sugar and ethanol.

Food and Ingredients

In the food and ingredients division, which consists of our edible oil products and milling products segments, our operating results are affected by changes in the prices of raw materials, such as crude vegetable oils and grains, the mix of products that we sell, changes in consumer eating habits, changes in per capita incomes, consumer purchasing power levels, availability of credit to customers, governmental dietary guidelines and policies, changes in regional economic conditions and the general competitive environment in our markets. Raw material inputs to our production processes in the edible oil products segment and the milling products segment are largely sourced at market prices from our agribusiness segment. Reported volumes in these segments reflect third-party sales of our finished products and, as such, include the sales of products derived from raw materials sourced from the agribusiness segment as well as from third parties. The unit of measure for these volumes is metric tons as these businesses are linked to the commodity raw materials which are their primary inputs.

Fertilizer

In the fertilizer segment, demand for our products is affected by the profitability of the agricultural sectors we serve, the availability of credit to farmers, agricultural commodity prices, the types of crops planted, the number of acres planted, the quality of the land under cultivation and weather-related issues

affecting the success of the harvests. Our profitability is impacted by international selling prices for fertilizers and fertilizer raw materials, such as phosphate, sulfur, ammonia and urea, ocean freight rates and other import costs as well as import volumes at the port facilities we manage in Brazil. As our operations are in South America, primarily Argentina, our results in this segment are typically seasonal, with fertilizer sales normally concentrated in the third and fourth quarters of the year due to the timing of the South American agricultural cycle. Reported volumes in this segment reflect third-party sales of our finished products.

In addition to these industry related factors which impact our business divisions, our results of operations in all business divisions and segments are affected by the following factors:

Foreign Currency Exchange Rates

Due to the global nature of our operations, our operating results can be materially impacted by foreign currency exchange rates. Both translation of our foreign subsidiaries' financial statements and foreign currency transactions can affect our results. On a monthly basis, for subsidiaries whose functional currency is their local currency, subsidiary statements of income and cash flows must be translated into U.S. dollars for consolidation purposes based on weighted-average exchange rates in each monthly period. As a result, fluctuations of local currencies compared to the U.S. dollar during each monthly period impact our consolidated statements of income and cash flows for each reported period (quarter and year-to-date) and also affect comparisons between those reported periods. Subsidiary balance sheets are translated using exchange rates as of the balance sheet date with the resulting translation adjustments reported in our consolidated balance sheets as a component of other comprehensive income (loss). Included in accumulated other comprehensive income for the years ended December 31, 2012, 2011 and 2010 were foreign exchange net translation gains (losses) of \$(805) million, \$(1,130) million and \$247 million, respectively, resulting from the translation of our foreign subsidiaries' assets and liabilities.

Additionally, we record transaction gains or losses on monetary assets and liabilities that are not denominated in the functional currency of the entity. These amounts are remeasured into their respective functional currencies at exchange rates as of the balance sheet date, with the resulting gains or losses included in the entity's statement of income and, therefore, in our consolidated statements of income as a foreign exchange gain/(loss).

We primarily use a combination of equity and intercompany loans to finance our subsidiaries. Intercompany loans that are of a long-term investment nature with no intention of repayment in the foreseeable future are considered permanently invested and as such are treated as analogous to equity for accounting purposes. As a result, any foreign exchange translation gains or losses on such permanently invested intercompany loans are reported in accumulated other comprehensive income (loss) in our consolidated balance sheets. In contrast, foreign exchange translation gains or losses on intercompany loans that are not of a permanent nature are

recorded in our consolidated statements of income as foreign exchange gains/(losses).

Income Taxes

As a Bermuda exempted company, we are not subject to income taxes on income in our jurisdiction of incorporation. However, our subsidiaries, which operate in multiple tax jurisdictions, are subject to income taxes at various statutory rates ranging from 0% to 39%. The jurisdictions that most significantly impact our effective tax rate are Brazil, the United States and Argentina. Determination of taxable income requires the interpretation of related and often complex tax laws and regulations in each jurisdiction where we operate and the use of estimates and assumptions regarding future events.

RESULTS OF OPERATIONS

2012 Overview

Net income attributable to Bunge for 2012 was \$64 million compared to \$942 million for 2011. Net income for 2012 includes an after-tax goodwill impairment charge of \$339 million in the sugar and bioenergy segment and an after-tax loss of \$342 million associated with discontinued fertilizer operations that are being sold (including a \$266 million valuation allowance for certain tax assets that were no longer expected to be recoverable as a result of the sale of the Brazilian fertilizer business). In addition, net income attributable to Bunge in 2012 included a \$54 million after-tax gain in our agribusiness segment from the sale of our investment in The Solae Company to our joint venture partner for \$448 million in cash exclusive of a special cash dividend of \$35 million, an after-tax gain of \$36 million from the acquisition in our milling product segment of a controlling interest in a joint venture, and an after-tax impairment charge of \$34 million associated with three equity investments and two affiliate loans to joint ventures in our sugar and bioenergy and agribusiness segments

Total segment EBIT of \$628 million declined from \$1,189 million in 2011, and includes the pre-tax impacts of the items noted above – \$514 million from the impairment of goodwill in the sugar and bioenergy segment, \$85 million from the sale of our interest in The Solae Company, \$36 million of gains from the acquisition of a controlling interest in a North American wheat milling business, and \$49 million from the impairment of three equity investments and two affiliate loans to joint ventures in 2012.

Agribusiness segment EBIT increased 16% driven by improved oilseed processing results in North and South America as well as strong grain merchandising results in Europe, Middle East and Africa (EMEA). Volumes in the segment increased 13%, reflecting improved crop availability in Eastern Europe, the impact of the expansion of our grain origination network in North America, the impact of our expanded port operations in North America and Ukraine and the full year results of the expansion of our oilseed processing operations in Asia. We also recognized a gain of \$85 million on the sale of our interest in Solae. In addition, a loss of \$66 million was recorded on the sale of \$94 million of recoverable tax assets in Brazil and

impairment charges of \$10 million were recorded related to the write-down of two equity investments in European biodiesel joint ventures and a loan to one of the ventures.

Sugar and bioenergy segment EBIT declined to \$(637) million compared to \$(20) million in 2011. Included in 2012 segment EBIT is a goodwill impairment charge of \$514 million as well as impairment charges of \$39 million related to the write-down of an equity investment in a North American corn ethanol joint venture and a loan to the joint venture. Weaker results in our industrial operations were primarily the result of the impact of adverse weather on sugarcane yields and total recoverable sugar (ATR) and lower sugar and ethanol prices in Brazil, which reduced our margins. These factors more than offset improvements in our trading and merchandising business.

In the food and ingredients division, edible oil products segment EBIT decreased to \$80 million in 2012 from \$137 million in 2011 driven by weaker margins in North America, \$20 million of value-added tax reserves in Brazil and \$5 million of impairment charges related to the closure of a European margarine plant. Results were also impacted by higher advertising expenses and challenges associated with an SAP implementation in Brazil. Milling products segment EBIT increased to \$115 million from \$104 million in 2011 primarily as a result of a \$36 million gain on the acquisition of a controlling interest in a North American wheat milling business. This gain more than offset lower volumes and results in our wheat milling operations in Brazil which were impacted by challenges associated with the SAP implementation in the first half of 2012.

Fertilizer segment EBIT decreased to \$23 million in 2012 compared to \$63 million in 2011 driven by lower results in our Moroccan joint venture and our Brazilian port operations. Our Argentine business continued to perform well. In December 2012, we entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer business, including blending facilities, brands and warehouses for \$750 million in cash, subject to post-closing adjustments. The transaction is

expected to close in the second half of 2013. Additionally, on December 31, 2012, we sold our interest in our North American fertilizer distribution joint venture to our partner, GROWMARK, Inc. and exited this business. As a result of these transactions, the results of these operations have been classified as discontinued operations for all periods presented.

Segment Results

Beginning in the first quarter of 2012, management responsibilities for certain Brazilian port facilities were moved from the agribusiness segment to the fertilizer segment. Accordingly, amounts presented for prior periods have been reclassified to conform to the current period segment presentation.

Bunge has five reportable segments – agribusiness, sugar and bioenergy, edible oil products, milling products and fertilizer – which are organized based upon similar economic characteristics and are similar in nature of products and services offered, the nature of production processes, the type and class of customer and distribution methods. The agribusiness segment is characterized by both inputs and outputs being agricultural commodities and thus high volume and low margin. The sugar and bioenergy segment involves sugarcane growing and milling in Brazil, sugar and ethanol trading and merchandising in various countries, as well as sugarcane-based ethanol production and corn-based ethanol investments and related activities. The edible oil products segment involves the manufacturing and marketing of products derived from vegetable oils. The milling products segment involves the manufacturing and marketing of products derived primarily from wheat and corn. Following the completion of the sale of Bunge's Brazilian fertilizer nutrients assets in May 2010 (see Note 3) and the classification of the Brazilian fertilizer distribution and North American fertilizer businesses as discontinued operations (see Note 3), the activities of the fertilizer segment include its port operations in Brazil and its operations in Argentina. Additionally, Bunge has retained its 50% interest in its fertilizer joint venture in Morocco.

A summary of certain items in our consolidated statements of income and volumes by reportable segment for the periods indicated is set forth below.

(US\$ in millions)	YEAR ENDED DECEMBER 31,

(1) Total segment earnings before interest and tax (EBIT) is an operating performance measure used by Bunge's management to evaluate its segments' operating activities. Total segment EBIT is a non-GAAP financial measure and is not intended to replace net income attributable to Bunge, the most directly comparable U.S. GAAP financial measure. Bunge's management believes segment EBIT is a useful measure of its segments' operating profitability, since the measure allows for an evaluation of the performance of its segments without regard to its financing methods or capital structure. In addition, EBIT is a financial measure that is widely used by analysts and investors in Bunge's industries. Total segment EBIT is not a measure of consolidated operating results under U.S. GAAP and should not be considered as an alternative to net income attributable to Bunge or any other measure of consolidated operating results under U.S. GAAP.

A reconciliation of total segment EBIT to net income attributable to Bunge follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Total segment earnings from continuing operations before interest and tax.....	\$ 628	\$1,189	\$3,198

Income tax (expense) benefit	6	(55)	(699)
Income from discontinued operations	(342)	(25)	38
Noncontrolling interests' share of interest and tax	13	32	44
Net income attributable to Bunge	<u>\$ 64</u>	<u>\$ 942</u>	<u>\$2,354</u>

2012 Compared to 2011

Agribusiness Segment. Agribusiness segment net sales increased \$5.7 billion compared to 2011. Volume increases, primarily in Europe and the Middle East, represented approximately \$5.3 billion of the increase with the remaining \$0.4 billion of the increase from higher average commodity selling prices, largely related to product mix. Higher volumes in Europe in 2012 related primarily to very weak volumes in the first half of 2011 particularly the first half of the year as a result of a severe drought in Eastern Europe in the last half of 2010 that significantly reduced grain availability in the region through early 2011. Strong merchandising demand, particularly in EMEA, also increased our volumes, as did our recent expansions, including additional origination capacity to support our export terminal in the U.S. Pacific Northwest and our Ukraine port facility as well as additional oilseed processing capacity in Asia.

Cost of goods sold increased \$5.6 billion over 2011 primarily due to the higher volumes mentioned above and, to a lesser extent, slightly higher commodity prices. Cost of goods sold was also favorably impacted by the effect of the weaker average Brazilian *real* on functional currency costs when translated to U.S. dollars. Cost of goods sold for 2012 also includes a charge of \$25 million related to certain value-added taxes in Brazil.

Gross profit increased to \$1.8 billion from \$1.7 billion in 2011 driven by improved oilseed processing margins in South America as a result of strong export demand due to the drought-reduced 2012 U.S. grain harvests and in grain merchandising in EMEA which also benefited from strong regional demand and strong oilseed processing margins in North America. These margin increases were partially offset by the \$25 million provision related to value-added taxes in cost of goods sold.

SG&A expenses increased 11% to \$858 million in 2012 from \$774 million in 2011 and driven by \$44 million of credit related expenses, primarily in Brazil and Europe, expansions in the U.S. and Asia and higher employee related costs, primarily in South America.

Foreign exchange gains were \$111 million in 2012 compared to losses of \$16 million in 2011, related primarily to the volatility of most global currencies relative to the U.S. dollar during both periods. Foreign exchange results in both 2012 and 2011 were

partially offset by inventory mark-to-market impacts included in cost of goods sold.

Gain on sale of investments in affiliates of \$85 million was the result of the sale of our investment in Solae, a North American soy ingredients joint venture, to our joint venture partner. Gain on sale of investments in affiliates of \$37 million in 2011 resulted from the sale of our interest in a European oilseed processing joint venture.

Noncontrolling interests were \$9 million in 2012 and \$18 million in 2011 and represents the noncontrolling interests' share of income at our non-wholly-owned subsidiaries, primarily our oilseed processing operations in China.

Other income (expense) for 2012 was expense of \$68 million compared to expense of \$11 million in 2011. Included in this line item were a charge of \$66 million in 2012 resulting from the sale of certain recoverable tax assets in Brazil at a discount and an impairment charge of \$9 million related to two equity method investments in European biodiesel producers.

Agribusiness segment EBIT increased 16% as a result of the combination of factors discussed above.

Sugar and Bioenergy Segment. Sugar and bioenergy segment net sales decreased \$1.2 billion from 2011. Lower selling prices for sugar and ethanol in both our trading and merchandising and industrial operations resulted in a reduction in net sales of \$1.4 billion. Increased volumes related primarily to higher sales volumes of sugar and ethanol in our industrial business in 2012, which increased net sales by \$0.2 billion when compared with 2011.

Cost of goods sold decreased \$1.1 billion primarily due to the impact of lower global sugar prices on our trading and merchandising business and on purchases of sugarcane in our industrial business. These price-related decreases in cost of goods sold were partially offset by the impact of slightly higher industrial volumes in 2012.

Gross profit decreased to \$64 million in 2012 from \$149 million in 2011 primarily due to the impact of lower sugar and ethanol selling prices on our industrial business. These decreases were partially offset by improved merchandising margins resulting from strong demand, particularly in the Middle East. Slightly higher volumes in our industrial operations also increased gross profit, but the benefit of the higher industrial volumes on

fixed cost absorption could not be fully realized as a result of lower sugar content in the sugarcane that we processed.

SG&A expenses increased to \$194 million in 2012 from \$167 million in 2011, primarily due to a charge of \$29 million due to write-down of a loan to our North American corn ethanol joint venture. SG&A expenses in 2011 included approximately \$11 million of acquisition related expenses and \$3 million of restructuring charges.

Foreign exchange losses were \$15 million in 2012 compared to losses of \$4 million in 2011 driven by the impact of continued volatility of the Brazilian *real* relative to the U.S. dollar.

A goodwill impairment charge of \$514 million, representing all of the segment's goodwill assets, was recorded in the fourth quarter of 2012 upon completion of our annual impairment analysis. This analysis applies equal weighting to comparable market multiples (the market approach) and discounted cash flow projections (the income approach) to determine a range of values for the fair value of the reporting unit. All of the goodwill in our sugar business has been assigned at the segment level. The income approach estimates fair value by discounting the segment's estimated future cash flows using a weighted-average cost of capital that reflects current market conditions and the risk profile of the business and includes, among other things, making assumptions about variables such as sugar and ethanol prices, future profitability, future capital expenditures and discount rates that might be used by a market participant. All of these assumptions are subject to a high degree of judgment. Compared to 2011 there was a significant decline in the estimated fair value of the reporting unit primarily due to lower current trading multiples of comparable companies in the industry, a lack of market transactions to provide independent insight into the market's perception of the current value of sugar milling operations and declines in global prices for both sugar and ethanol. Based on a detailed review of the results of these valuation approaches, it was determined that there were indicators of a potential impairment of the goodwill and further analysis was done to evaluate the fair value of the assets and liabilities of the segment as of the October 1, 2012 testing date. This allocation of the fair value included higher replacement values of our sugarcane mills compared to 2011, increased value allocated to sugarcane plantations and increased values of transportation and mechanization equipment related to sugarcane planting and harvesting. Upon completion of the analysis, 100% of the goodwill was determined to be impaired and a related charge was recorded within the segment. This non-cash charge does not have any impact on current or future cash flows or the performance of the underlying business.

Noncontrolling interests were \$25 million in 2012 and \$(2) million in 2011 and represents the noncontrolling interests' share of period (income) loss at our non-wholly-owned Brazilian sugarcane mills. In 2012, \$18 million of the noncontrolling interests' share of period loss was attributable to the noncontrolling interests' share of the goodwill impairment.

Other income (expense) for 2012 was a net expense of \$3 million compared to income of \$4 million in 2011.

Impairment charges of \$10 million were recorded in 2012 associated with the write-down of an investment in a North American corn ethanol joint venture.

Segment EBIT decreased by \$617 million to a loss of \$637 million in 2012 from a loss of \$20 million in 2011 primarily as a result of the 2012 non-cash impairment charges for goodwill and an equity method investment and related loan as well as the unfavorable impact of lower sugar and ethanol prices and of higher unit costs due to lower sugarcane yields and ATR, on gross profit.

Edible Oil Products Segment. Net sales increased \$633 million from 2011 as the impact of higher sales volumes (which increased 11%) of approximately \$949 million was partially offset by the impact of lower average selling prices (which decreased 4%) of approximately \$316 million. Volumes increased primarily in Asia resulting from the expansion of our operations in China and our Amrit acquisition in India; volumes also increased in Europe.

Cost of goods sold increased 8% as a result of the increased volumes in 2012, partially offset by a 3% decline in average raw material costs. Cost of goods sold in 2012 includes charges of \$16 million related to certain value-added taxes in Brazil, impairment charges of \$5 million related to the write-down of a European refining facility and certain inventory adjustments in the U.S.

Gross profit of \$446 million in 2012 declined 3% when compared to gross profit of \$462 million in 2011 due primarily to the impact of the value-added tax charge in Brazil and the write-down of the European refining facility.

SG&A increased \$28 million to \$353 million in 2012 compared to \$325 million in 2011 primarily due to increased expenses and costs associated with the implementation of SAP in Brazil as well as the impact of acquisitions in India and North America. These increases were partially offset by the favorable impact of the weaker average Brazilian *real* on the translation of functional currency costs into U.S. dollars. SG&A for 2011 included a provision of \$12 million for expiring tax credits in Brazil.

Foreign exchange results for 2012 were losses of \$8 million compared to gains of \$3 million for 2011 driven by the impact of continued volatility of global currencies relative to the U.S. dollar.

Noncontrolling interests were \$2 million in 2012 and \$(6) million in 2011 and represents the noncontrolling interests' share of period income at our non-wholly-owned subsidiaries, primarily in our European operations.

Other income (expense) was \$7 million of net expense in 2012 compared to \$3 million of net income in 2011. Other income (expense) for 2011 included a \$6 million gain related to the sale of an idled facility in Canada.

Segment EBIT decreased by \$57 million to \$80 million in 2012 from \$137 million in 2011. This decrease primarily resulted from lower gross profit driven by \$20 million of charges related to

certain value-added taxes in Brazil, \$5 million of impairment charges in Europe and higher SG&A costs.

Milling Products Segment. Milling products segment net sales decreased 9% from 2011 primarily due to an 8% decline in volumes, which accounts for approximately 88% of the decrease in net sales. Volumes in our Brazilian wheat milling business were well below last year, primarily as a result of lost sales opportunities due to the impact of an SAP implementation on operations in the first half of the year. Volumes were also significantly below last year in our U.S. corn milling business, resulting from a decline in demand for food-aid products in North America. These decreases were partially offset by the consolidation upon acquisition of a controlling interest in a North American wheat milling operation in the second quarter of 2012. The remaining 12% decrease in net sales resulted from lower average selling prices.

Cost of goods sold decreased 8% from 2011 primarily due to lower corn and wheat milling sales volumes, lower average prices for corn and wheat and the favorable impact of the devaluation of the Brazilian *real* on local currency costs when translated into U.S. dollars. These decreases were partially offset by a charge of \$6 million of charges related to certain value-added taxes in Brazil.

Gross profit decreased 14% from 2011 primarily as a result of a lower value product mix, particularly in corn milling, lower overall volumes in both wheat and corn milling and the \$7 million of charges related to certain value-added taxes in Brazil.

SG&A expenses decreased 7% primarily due to the impact of the weaker average Brazilian *real* on the translation of functional currency costs into U.S. dollars which was partially offset by higher selling costs in Brazil. In addition, costs increased as a result of the consolidation of a North American wheat milling business following our acquisition of a controlling interest in the second quarter of 2012.

Other income (expense) was zero in 2012 compared to income of \$2 million in 2011 which included a \$6 million gain on the sale of a wheat milling facility in Brazil.

Gain on acquisition of controlling interest was \$36 million related to the fair value adjustment of our minority investment in a North American wheat milling business upon acquisition of a controlling interest in the second quarter of 2012.

Segment EBIT increased to \$115 million in 2012 from \$104 million in 2011 as lower gross profit and higher SG&A costs were more than offset by the gain on acquisition of controlling interest in a North American wheat milling business as described above.

Fertilizer Segment. Fertilizer segment net sales decreased 18% in 2012 when compared to 2011 as a result of a decline in fertilizer sales volumes, primarily in Argentina, a decline in international fertilizer prices and a decline in port services

provided by us, primarily in Brazil. Volumes declined 14%, mainly as a result of weaker demand for nitrogen fertilizers which impacted our Argentine operations. These volume declines accounted for approximately 73% of the decrease in net sales, with lower selling prices accounting for approximately 27% of the decline. Net sales were also reduced by the impact of the devaluation of the Brazilian *real* on local currency revenues when translated into U.S. dollars.

Cost of goods sold decreased 17% primarily as a result of lower volumes, lower raw material costs in Argentina, and the impact of the *real* devaluation. These decreases were partially offset by higher industrial costs in Argentina.

Gross profit of \$76 million in 2012 declined from \$95 million in 2011 primarily as a result of lower sales volumes. Our port operations in Brazil also reported lower margins resulting from lower throughput of import volumes as a result of a strike by federal customs workers during the year.

SG&A declined to \$35 million in 2012 from \$38 million in 2011 primarily as a result of cost reduction efforts related to the Brazilian port operations and the favorable impact of the devaluation of the Brazilian *real* on local currency costs when translated to U.S. dollars.

Foreign exchange results were a loss of \$1 million in 2012 compared to a gain of \$1 million in 2011.

Noncontrolling interests were \$3 million in 2012 and \$4 million in 2011 and represents the noncontrolling interests' share of period income at our non-wholly-owned subsidiaries in our Brazilian port operations.

Other income (expense) was expense of \$14 million in 2012 compared to income of \$9 million in 2011 primarily as a result of lower results in our Moroccan joint venture.

Segment EBIT decreased 63% in 2012 to \$23 million primarily as a result of lower fertilizer volumes, weaker results in our Moroccan joint venture and our Brazilian port operations.

Interest. A summary of consolidated interest income and expense for the periods indicated follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,	
	2012	2011
Interest income	\$ 53	\$ 96
Interest expense	(294)	(295)

Interest income decreased 45% primarily due to lower income from interest bearing receivables and lower average interest bearing cash balances. Interest expense was substantially unchanged from 2011. Interest expense includes facility commitment fees, amortization of deferred financing costs and charges on certain lending transactions, including certain intercompany loans and foreign currency conversions in Brazil.

Income Tax Expense. In 2012, we recorded an income tax benefit of \$6 million compared to expense of \$55 million in 2011. The effective tax rate for 2012 was a benefit of 2% which included a tax benefit of \$175 million related to the goodwill impairment charge in our sugar and bioenergy segment. Goodwill amortization is tax deductible in Brazil. This benefit reduced the effective tax rate for 2012 by 20%. The effective tax rate for 2011 was 5%. The lower effective tax rate for 2012 resulted primarily from the impact of the tax benefit on the goodwill impairment charge which more than offset higher taxable income in higher tax jurisdictions in 2012.

Discontinued Operations. In December 2012, Bunge entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer business including blending facilities, brands and warehouses. As a result of this transaction, Bunge will exit its Brazilian fertilizer business and has reported the results from these operations as discontinued operations. Additionally, in December 2012 Bunge announced the sale of its interest in its fertilizer distribution venture to its partner GROWMARK, Inc. and would cease its North American fertilizer distribution operations in 2013, and has classified the results of those operations as discontinued operations. The net after-tax loss of \$342 million in 2012 is primarily the result of nonrecurring charges associated with the pending sale of the Brazilian fertilizer operations, including an after-tax charge of \$32 million related to an evaluation of the impact of the pending sale on recovery of long-term receivables from farmers in Brazil and a charge of \$266 million related to an income tax valuation allowance as the pending sale of the business has reduced our ability to utilize this tax asset. Results of operations for the discontinued businesses were a loss of \$44 million in 2012 and resulted from weakness in the Brazilian fertilizer market and an after-tax charge of \$18 million related to a provision for an legacy environmental claim from 1998 in Brazil. Results from discontinued operations for 2011 were a loss of \$25 million.

Net Income Attributable to Bunge. 2012 net income attributable to Bunge declined by \$878 million to \$64 million from \$942 million in 2011. This decrease was primarily the result of an after-tax charge of \$327 million related to the impairment of sugar and bioenergy segment goodwill, a loss of \$342 million for results of discontinued operations, net of tax as noted above and after-tax impairment charges of \$34 million related to the write-down of equity method investments and related loans.

2011 Compared to 2010

Agribusiness Segment. Agribusiness segment net sales increased 29% due primarily to an increase in average selling prices for agricultural commodities resulting from global supply and demand factors, and higher volumes. Volumes increased by 8% when compared to 2010 due to stronger origination and processing volumes in South America, higher distribution volumes, primarily in Europe due to increased availability of sunflower seed, and the expansion of our grain origination operations in North America and oilseed processing operations in Asia.

Cost of goods sold increased 31% compared to 2010 due primarily to the increase in commodity prices and higher volumes. Cost of goods sold was also unfavorably impacted by the effect of the weaker average U.S. dollar on the translation of functional currency costs. Cost of goods sold in 2010 included \$36 million of impairment and restructuring charges.

Gross profit increased to \$1,687 million from \$1,631 million in 2010 driven by improved grain origination margins and volumes in the first half of 2011 which benefited from a large South American harvest and improved North American oilseed processing margins. Also contributing to the results were strong oilseed processing margins and volumes in South America resulting from better crops, and higher distribution volumes, particularly sunflower seeds in Europe, during the second half of the year. Gross profit in 2010 was reduced by \$36 million of impairment and restructuring charges.

SG&A expenses of \$774 million decreased slightly when compared to 2010. Restructuring charges of \$4 million were recorded in 2010.

Foreign exchange losses were \$16 million in 2011 compared to losses of \$1 million in 2010, related primarily to the volatility of many global currencies relative to the U.S. dollar during both periods. Foreign exchange losses in both 2011 and 2010 were partially offset by inventory mark-to-market impacts included in cost of goods sold.

Gain on sale of investment in affiliates of \$37 million in 2011 was related to the sale of our interest in a European oilseed processing joint venture.

Noncontrolling interests were \$18 million in 2011 and \$44 million in 2010 and represents the noncontrolling interests' share of period income at our non-wholly-owned subsidiaries, primarily our oilseed processing operations in China.

Other income (expense) for 2011 was a net expense of \$11 million compared to income of \$20 million in 2010.

Agribusiness segment EBIT increased 9% as a result of the factors discussed above.

Sugar and Bioenergy Segment. Sugar and bioenergy segment net sales increased 31% when compared to 2010 largely due to higher selling prices for sugar and ethanol. Volumes were substantially unchanged from 2010 with improved industrial volumes largely offset by lower sugar merchandising volumes.

Cost of goods sold also increased 31% due to the impact of higher global sugar prices on our merchandising business. In addition, higher industrial volumes and the influence of higher global sugar and ethanol prices on the cost of sugarcane sourced from third parties in Brazil also contributed to the increase in cost of goods sold. Cost of goods sold in 2011 included approximately \$14 million of charges related to counterparty valuation adjustments as certain millers supplying a portion of our sugar merchandising volumes were not able to meet commitments as a result of the 2010 drought in Brazil.

Gross profit increased to \$149 million in 2011 from \$101 million in 2010 primarily due to improved results in our industrial business which benefited from higher sales prices and volumes. These improvements were partially offset by weaker results in our sugar merchandising business.

SG&A expenses increased to \$167 million in 2011 from \$139 million in 2010, primarily due to the expansion of our industrial business and the unfavorable impact of a stronger average Brazilian *real* on the translation of functional currency costs into U.S. dollars. SG&A expenses in 2010 included approximately \$11 million of acquisition-related expenses and \$3 million of restructuring charges.

Foreign exchange losses were \$4 million in 2011 compared to gains of \$30 million in 2010 driven by the impact of continued volatility of the Brazilian *real* relative to the U.S. dollar on derivatives hedging our operations in Brazil. Equity in earnings of affiliates was \$2 million in 2011 compared to a loss of \$6 million in 2010 reflecting the improved results of our North American bioenergy investments.

Noncontrolling interest of \$(2) million in 2011 and \$9 million in 2010 represents the noncontrolling interests' share of period (income) loss at our non-wholly-owned Brazilian sugarcane mills.

Segment EBIT decreased by \$7 million to a loss of \$20 million from a loss of \$13 million in 2010 as increases in SG&A and the impact of foreign exchange losses relative to 2010 gains more than offset improvements in gross profit.

Edible Oil Products Segment. Net sales increased 30% primarily due to higher average selling prices of edible oil products. Volumes increased slightly when compared to 2010.

Cost of goods sold increased 32% as a result of higher raw material costs. Cost of goods sold in 2010 included impairment charges of \$27 million primarily related to the write-down of a European oilseed processing and refining facility.

Gross profit increased 8% due primarily to the impact of the impairment charges which reduced 2010 gross profit. Stronger margins in 2011 for packaged oils, primarily in North America, also contributed to higher gross profit.

SG&A decreased 2% compared to 2010, which included a provision of \$12 million for expiring tax credits in Brazil and restructuring charges of \$3 million. SG&A was also unfavorably impacted by the weaker average U.S. dollar on the translation of functional currency costs into U.S. dollars.

Foreign exchange results for 2011 were a gain of \$3 million compared to zero for 2010.

Other income (expense) was \$3 million of net income in 2011 compared to net expense of \$10 million in 2010. Other income (expense) for 2011 included a \$6 million gain related to the sale of an idled facility in Canada.

Segment EBIT increased by \$57 million to \$137 million from \$80 million in 2010. This increase relates primarily to the reduced 2010 segment EBIT resulting from the \$29 million of

impairment and restructuring charges and the \$12 million provision for expiring tax credits in Brazil. The remaining increase in segment EBIT resulted from higher gross margins and the 2011 gain related to the sale of an idled facility in Canada.

Milling Products Segment. Milling products segment net sales increased 25% from 2010 due to higher average selling prices as global corn and wheat prices increased compared to last year. Volumes increased slightly as higher volumes in our U.S. rice milling business acquired in the fourth quarter of 2010 more than offset decreases in our corn and wheat milling volumes.

Cost of goods sold increased 23% when compared to 2010 primarily due to the increase in raw material costs for both wheat and corn. Cost of goods sold in 2010 included impairment and restructuring charges of \$12 million related primarily to the write-down of a long-term supply agreement that accompanied a wheat mill acquisition.

Gross profit increased 39% compared to 2010. Gross profit in 2010 was reduced by \$12 million of impairment and restructuring charges included in cost of goods sold as noted above. Gross profit in 2011 benefited from improved corn milling margins resulting primarily from strong milling yields on very high quality milling corn and effective risk management. A full year of rice milling operations also benefited 2011 gross profit. Wheat milling gross margins were consistent with last year.

SG&A expenses increased 22% primarily due to higher selling expenses and \$5 million of bad debts in Brazil, as well as the negative impact of the stronger average Brazilian *real* on the translation of functional currency costs into U.S. dollars. A full year of rice milling costs also increased expenses compared with 2010. SG&A expenses in 2010 included restructuring charges of \$3 million.

Other income (expense) was income of \$2 million in 2011 compared to income of \$11 million in 2010 which included a \$6 million gain on the sale of a wheat milling facility in Brazil.

Segment EBIT increased to \$104 million in 2011 from \$67 million in 2010 primarily as a result of increased gross profit as described above.

Fertilizer Segment. Fertilizer segment net sales decreased 46% in 2011 when compared to 2010 as a result of the decline in volumes which was slightly offset by higher international fertilizer prices. Volumes declined 64% compared to 2010 primarily due to the sale of our Brazilian nutrients assets, including Fosfertil, in the second quarter of 2010.

Cost of goods sold decreased 56% primarily as a result of lower volumes despite higher raw material costs. Cost of goods sold in 2010 included restructuring charges of \$4 million.

Gross profit of \$95 million in 2011 improved from \$(14) million in 2010 as a result of improved margins in our Argentine operations and the sale of our Brazilian nutrients assets which had incurred losses in 2010.

SG&A declined to \$38 million in 2011 from \$98 million in 2010 primarily as a result of the elimination of certain costs associated with the Brazilian fertilizer nutrients assets.

Gain on sale of fertilizer nutrients assets was \$2,440 million in 2010. The disposal of our Brazilian nutrients assets, including our investments in Fosfertil and Fosbrasil, a phosphoric acid joint venture, was completed during the second quarter of 2010.

Foreign exchange gains were \$1 million in 2011 compared to gains of \$16 million in 2010, primarily due to changes in U.S. dollar monetary liability positions funding working capital during 2011 when compared to 2010.

Noncontrolling interests of \$4 million in 2011 and \$38 million in 2010 were the noncontrolling interests' share of period income. 2010 included the noncontrolling interest share of income related to Fosfertil which was disposed of in the second quarter of 2010 as part of the Brazilian nutrients asset sale.

Other income (expense) decreased to \$9 million from \$20 million in 2010 primarily due to weaker results in our Moroccan phosphate joint venture driven by the acceleration of a scheduled annual maintenance shut-down due to volatile margins.

Segment EBIT decreased to \$63 million compared to \$2,326 million in 2010 which included the \$2,440 million gain on the sale of the Brazilian nutrients assets.

Loss on Extinguishment of Debt. In 2010, we recorded an expense of \$90 million related to make-whole payments made in connection with the early repayment of approximately \$827 million of debt with a portion of the proceeds from the sale of the Brazilian fertilizer nutrients assets.

Interest. A summary of consolidated interest income and expense for the periods indicated follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,	
	2011	2010
Interest income	\$ 96	\$ 67
Interest expense	(295)	(294)

Interest income increased 43% primarily due to interest income related to certain income tax prepayments, primarily in Brazil. Interest expense increased slightly as higher average borrowings resulting from increased working capital requirements during 2011 more than offset the impact of lower average interest rates when compared to 2010. Interest expense includes facility commitment fees, amortization of deferred financing costs and charges on certain lending transactions, including certain intercompany loans and foreign currency conversions in Brazil.

Income Tax Expense. In 2011, we recorded income tax expense of \$55 million compared to \$699 million in 2010. The effective tax rate for 2011 was 5% compared to 23% in 2010. The lower effective tax rate for 2011 resulted primarily from lower taxable income in higher tax jurisdictions, particularly Brazil. The effective tax rate for 2010 resulted primarily from the tax

impact of the gain on the Brazilian fertilizer nutrients assets sale in the second quarter of 2010.

Included in our income tax expense for 2010 was \$539 million of taxes on the gain from the Brazilian fertilizer nutrients assets sale. Also included was \$80 million of valuation allowances related to deferred tax assets which we do not expect to fully recover prior to their expiration and \$15 million of tax expense related to the new "thin capitalization" tax legislation that was enacted in Brazil in September 2010, which denies income tax deductions for interest payments with respect to certain debt to the extent a company's debt-to-equity ratio exceeds a certain threshold or the debt is with related parties located in a tax haven jurisdiction as defined under the law.

Discontinued Operations. On December 6, 2012, Bunge entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer business including blending facilities, brands and warehouses. As a result of this transaction, Bunge will exit its Brazilian fertilizer business and has reported the results from these operations as discontinued operations. Additionally, Bunge has announced it would cease its North American fertilizer operations in 2013 and has classified the results of those operations as discontinued operations. The net after-tax loss of these businesses was \$25 million in 2011 which was driven by the continued weakness in the Brazilian fertilizer market. Results from discontinued operations for 2010 were net income of \$38 million.

Net Income Attributable to Bunge. 2011 net income attributable to Bunge was \$942 million compared to \$2,354 million in 2010 which included the \$1,901 million gain on the sale of the Brazilian fertilizer nutrients assets.

LIQUIDITY AND CAPITAL RESOURCES

Liquidity

Our primary financial objective is to maintain sufficient liquidity, balance sheet strength and financial flexibility in order to fund the requirements of our business efficiently. We generally finance our ongoing operations with cash flows generated from operations, issuance of commercial paper, borrowings under various revolving credit facilities and term loans, as well as proceeds from the issuance of senior notes. Acquisitions and long-lived assets are generally financed with a combination of equity and long-term debt.

Our current ratio, which is a widely used measure of liquidity and is defined as current assets divided by current liabilities, was 1.50 and 1.70 at December 31, 2012 and 2011, respectively.

Cash and Cash Equivalents. Cash and cash equivalents were \$569 million at December 31, 2012 and \$835 million at December 31, 2011. Cash balances are managed in accordance with our investment policy, the objectives of which are to preserve capital, maximize liquidity and provide appropriate returns. Under our policy, cash balances have been primarily invested in bank time deposits with highly-rated financial institutions and in government securities.

Readily Marketable Inventories. Readily marketable inventories are agricultural commodity inventories, such as soybeans, soybean meal, soybean oil, corn, wheat, and sugar that are readily convertible to cash because of their commodity characteristics, widely available markets and international pricing mechanisms. Readily marketable inventories in our agribusiness segment were \$4,892 million at December 31, 2012 and \$3,724 million at December 31, 2011, respectively. Agribusiness readily marketable inventories are valued at fair value. The sugar and bioenergy segment included readily marketable sugar inventories of \$199 million and \$139 million at December 31, 2012 and December 31, 2011, respectively. Of these readily marketable sugar inventories, \$144 million and \$83 million, respectively were in our trading and merchandising business and were carried at fair value. Sugar inventories in our industrial business are readily marketable, but are carried at lower of cost or market. Readily marketable inventories at fair value in the aggregate amount of \$215 million and \$212 million at December 31, 2012 and December 31, 2011, respectively, were included in our edible oil products segment inventories. We recorded interest expense on debt financing for readily marketable inventories of \$133 million and \$106 million in the year ended December 31, 2012 and 2011, respectively.

Financing Arrangements and Outstanding Indebtedness. We conduct most of our financing activities through a centralized financing structure that enables us and our subsidiaries to borrow more efficiently. This structure includes a master trust facility, the primary assets of which consist of intercompany loans made to Bunge Limited and its subsidiaries. Certain of Bunge Limited's 100% owned finance subsidiaries, Bunge Limited Finance Corp., Bunge Finance Europe B.V. and Bunge Asset Funding Corp., fund the master trust with short and long-term debt obtained from third parties, including through our commercial paper program and certain credit facilities, as well as the issuance of senior notes. Borrowings by these finance subsidiaries carry full, unconditional guarantees by Bunge Limited.

Revolving Credit Facilities. At December 31, 2012, we had approximately \$3,361 million of aggregate committed borrowing capacity under our commercial paper program and revolving credit facilities, all of which was unused and available. The following table summarizes these facilities as of the periods presented:

		TOTAL AVAILABILITY	BORROWINGS OUTSTANDING	
COMMERCIAL PAPER PROGRAM AND REVOLVING CREDIT FACILITIES	MATURITIES	DECEMBER 31, 2012	DECEMBER 31, 2012	DECEMBER 31, 2011
(US\$ in millions)				
Commercial Paper	2016	\$ 526	\$ -	\$ 73
Long-Term Revolving Credit Facilities ⁽¹⁾	2014 - 2016	2,835	-	250
Total		\$3,361	\$ -	\$323

(1) Borrowings under the revolving credit facilities that have maturities greater than one year from the date of the consolidated balance sheets are classified as long-term debt, consistent with the long-term maturity of the underlying facilities. However, individual borrowings under the revolving credit facilities are generally short-term in nature, bear interest at variable rates and can be repaid or renewed as each such individual borrowing matures.

Our commercial paper program is supported by committed back-up bank credit lines (the liquidity facility) equal to the amount of the commercial paper program provided by lending institutions that are rated at least A-1 by Standard & Poor's and P-1 by Moody's Investor Services. The cost of borrowing under the liquidity facility would typically be higher than the cost of borrowing under our commercial paper program. On June 22, 2012, Moody's Investor Services downgraded the credit ratings of certain financial institutions, including two banks with an aggregate commitment of \$74 million under our \$600 million liquidity facility. As these banks no longer met the minimum ratings required to participate in the liquidity facility following the downgrades, these banks' commitments under the liquidity facility were terminated and the amount available under the facility was reduced by \$74 million to \$526 million. As a result of the reduction of the liquidity facility, the size of our commercial paper program was also simultaneously reduced to \$526 million. Our commercial paper program is our only revolving credit facility that requires lenders to maintain minimum credit ratings. At December 31, 2012, there were no borrowings outstanding under the commercial paper program. In January 2013, we increased the commitments under the liquidity facility to \$600 million and therefore simultaneously

increased the size of our commercial paper program to \$600 million.

In October 2012, we increased the available amount under our syndicated \$1,000 million revolving credit facility which matures on November 17, 2016 to \$1,085 million pursuant to the term of the facility agreement. Borrowings under this credit facility bear interest at LIBOR plus an applicable margin ranging from 1.125% to 1.75%, based on the credit ratings of our long-term senior unsecured debt. Amounts under the credit facility that remain undrawn are subject to commitment fees payable each quarter based on the average undrawn portion of the credit facility at rates ranging from 0.125% to 0.275% per annum, based generally on the credit ratings of our long-term senior unsecured debt. There were no borrowings outstanding under this credit agreement at December 31, 2012.

In addition, we had no borrowings outstanding at December 31, 2012 under our syndicated \$1,750 million revolving credit agreement that matures on April 19, 2014. Borrowings under the credit agreement bear interest at LIBOR plus an applicable margin ranging from 1.30% to 2.75%, based generally on the credit ratings of our senior long-term unsecured debt. Amounts under the credit agreement that

remain undrawn are subject to a commitment fee payable quarterly on the average undrawn portion of the credit agreement at 35% of the applicable margin.

In addition to the committed facilities above, from time to time, we enter into uncommitted short-term credit lines as necessary based on our liquidity requirements. At December 31, 2012 and 2011, \$1,000 million and \$400 million, respectively, were outstanding under these uncommitted short-term credit lines.

Short and Long-Term Debt. Our short and long-term debt increased by \$1,768 million at December 31, 2012 from December 31, 2011, primarily due to higher working capital levels.

For the year ended December 31, 2012, our average short and long-term debt outstanding was approximately \$6,338 million compared to \$4,964 million for the year ended December 31, 2011. The increase resulted primarily from higher inventories and commodity prices. Generally, our borrowings increase in times of rising commodity prices as we borrow to acquire inventory and fund margin calls on our short futures positions which are hedging physical inventories. The long-term debt outstanding balance was \$4,251 million at December 31, 2012 compared to \$3,362 million at December 31, 2011. The following table summarizes our short-term debt activity during the year ended December 31, 2012.

(US\$ in millions)	OUTSTANDING BALANCE AT DECEMBER 31, 2012	WEIGHTED AVERAGE INTEREST RATE AT DECEMBER 31, 2012	HIGHEST BALANCE OUTSTANDING DURING 2012 ⁽¹⁾	AVERAGE BALANCE DURING 2012 ⁽¹⁾	WEIGHTED AVERAGE INTEREST RATE DURING 2012
Bank Borrowings.....	\$1,598	6.59%	\$3,504	\$1,718	3.89%
Commercial Paper	-	-	471	89	0.45%
Total.....	<u>\$1,598</u>	<u>6.59%</u>	<u>\$3,975</u>	<u>\$1,807</u>	<u>3.72%</u>

(1) Based on monthly balances.

In March 2012, we acquired an asset management business and were deemed the primary beneficiary of certain related investment funds resulting in the consolidation of these investment funds. As a result, our long-term debt balance increased by \$354 million. This debt is not an obligation of Bunge and the investment funds' creditors do not have any recourse to Bunge under the relevant debt agreements.

In June 2012, we completed the sale of \$600 million aggregate principal amount of unsecured senior notes bearing interest at 3.20% per annum and maturing on June 15, 2017. The senior notes were issued by our 100% owned finance subsidiary, Bunge Limited Finance Corp., and are fully unconditionally guaranteed by Bunge Limited. Interest on the senior notes is payable semi-annually in arrears in June and December of each year, commencing in December 2012. The net proceeds from this offering of approximately \$595 million after deducting underwriters' commissions and offering expenses were used for general corporate purposes, including the repayment of outstanding indebtedness, including indebtedness under our revolving credit facilities. Debt issuance costs of approximately \$5 million were paid in conjunction with the issuance of the senior notes and will be amortized to interest expense on a straight-line basis over the five-year term of the senior notes.

In August 2012, the \$300 million 3.32% fixed rate term loan credit facility due 2013 was amended to include additional borrowing capacity of \$100 million carrying a variable rate of interest of LIBOR plus 1.38%.

The following table summarizes our short and long-term indebtedness:

(US\$ in millions)	DECEMBER 31, 2012 2011	
Short-term debt:		
Short-term debt ⁽¹⁾	\$1,598	\$ 719

Less: Current portion of long-term debt	<u>(719)</u>	<u>(14)</u>
Total long-term debt excluding investment fund debt	<u>3,178</u>	<u>3,348</u>
Consolidated non-recourse investment fund debt ⁽⁶⁾	354	-
Total debt	<u>\$5,849</u>	<u>\$4,081</u>

(1) Includes \$378 million of local currency borrowings in certain Eastern European, South American and Asian countries at a weighted-average interest rate of 18.78% as of

December 31, 2012 and \$97 million at a weighted-average interest rate of 22.72% as of December 31, 2011.

(2) Includes secured debt of \$130 million and \$66 million at December 31, 2012 and December 31, 2011, respectively.

(3) In August 2012, the \$300 million 3.32% fixed rate term loan credit facility was amended to include additional borrowing capacity of \$100 million carrying a variable interest rate of LIBOR plus 1.38%.

(4) Industrial development loans provided by BNDES, an agency of the Brazilian government.

(5) TJLP is a long-term interest rate published by the BNDES on a quarterly basis; TJLP was 5.00% per annum at December 31, 2012 and 6.00% per annum at December 31, 2011.

(6) Long-term debt of consolidated investment funds at December 31, 2012 with no recourse to Bunge maturing at various dates through 2017.

Credit Ratings. Bunge's debt ratings and outlook by major credit rating agencies at December 31, 2012 were as follows:

	SHORT-TERM DEBT	LONG-TERM DEBT	OUTLOOK
Standard & Poor's	A-1	BBB-	Positive
Moody's	P-1	Baa2	Stable ⁽¹⁾
Fitch	Not Rated	BBB	Negative

(1) On February 27, 2013 Moody's Investor Services, Inc. affirmed our Baa long-term senior unsecured debt rating while changing the outlook on the rating to "negative" from "stable".

Our debt agreements do not have any credit rating downgrade triggers that would accelerate maturity of our debt. However, credit rating downgrades would increase our borrowing costs under our credit facilities and, depending on their severity, could impede our ability to obtain credit facilities or access the capital markets in the future on favorable terms. A significant increase in our borrowing costs could impair our ability to compete effectively relative to competitors with higher credit ratings.

Our credit facilities and certain senior notes require us to comply with specified financial covenants, including minimum net worth, minimum current ratio, a maximum debt to capitalization ratio and limitations on secured indebtedness. We were in compliance with these covenants as of December 31, 2012.

Interest Rate Swap Agreements. We may use interest rate swaps as hedging instruments and record the swaps at fair value in the consolidated balance sheets with changes in fair value recorded contemporaneously in earnings. Additionally, the carrying amount of the associated debt is adjusted through earnings for changes in the fair value due to changes in benchmark interest rates. Ineffectiveness, as defined in ASC Topic 815 *Derivatives and Hedging*, is recognized to the extent that these two adjustments do not offset.

Equity. Our total shareholders' equity was \$11,255 million at December 31, 2012, as set forth in the following table:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Convertible perpetual preference shares	\$ 690	\$ 690
Common shares	1	1
Additional paid-in capital	4,909	4,829
Retained earnings	6,792	6,917
Accumulated other comprehensive income	(1,410)	(610)
Treasury shares, at cost (2012 and 2011 - 1,933,286)	(120)	(120)
Total Bunge shareholders' equity	10,862	11,707
Noncontrolling interests	393	368
Total equity	\$11,255	\$12,075

Total Bunge shareholders' equity decreased to \$10,862 million at December 31, 2012 from \$11,707 million at December 31, 2011. The change in equity was primarily due to foreign currency translation losses of \$805 million and declared dividends to common and preferred shareholders of \$151 million and \$34 million, respectively, partially offset by net income attributable to Bunge for the year ended December 31, 2012 of \$64 million.

Noncontrolling interests increased to \$393 million at December 31, 2012 from \$368 million at December 31, 2011 due primarily to an acquisition of noncontrolling interest totaling \$40 million and capital contributions totaling \$13 million by noncontrolling interest holders, partially offset by dividends of \$7 million to noncontrolling interests.

At December 31, 2012, we had 6,900,000 4.875% cumulative convertible perpetual preference shares outstanding with an aggregate liquidation preference of \$690 million. Each convertible perpetual preference share has an initial liquidation preference of \$100, which will be adjusted for any accumulated and unpaid dividends. The convertible perpetual preference shares carry an annual dividend rate of \$4.875 per share. Dividends are cumulative and are payable quarterly in arrears. As a result of adjustments made to the initial conversion price because cash dividends paid on Bunge Limited's common shares exceeded certain specified thresholds, each convertible perpetual preference share is convertible, at the holder's option, at any time into approximately 1.1059 Bunge Limited common shares, based on the conversion price of \$90.4265 per share, subject to certain additional anti-dilution adjustments. At any time on or after December 1, 2012, if the closing price of our common shares equals or exceeds 130% of the conversion price for 20 trading days during any consecutive 30 trading days (including the last trading day of such period), we may elect to cause the convertible perpetual preference shares to be automatically converted into Bunge Limited common shares at the then-prevailing conversion price. The convertible preference shares are not redeemable by us at any time.

Cash Flows

Our cash flow from operations varies depending on, among other items, the market prices and timing of the purchase and sale of our inventories. Generally, during periods when commodity prices are rising, our agribusiness operations require increased use of cash to support working capital to acquire inventories and daily settlement requirements on exchange traded futures that we use to minimize price risk related to our inventories.

2012 Compared to 2011. In 2012, our cash and cash equivalents decreased by \$266 million reflecting the net effect of cash flows from operating, investing and financing activities. For the year ended December 31, 2011, our cash and cash equivalents increased by \$257 million.

Our operating activities used cash of \$457 million for the year ended December 31, 2012 compared to generated cash of \$2,614 million in 2011. The negative cash flows from operating activities for the year ended December 31, 2012 resulted primarily from higher average working capital needs. The positive cash flows from operating activities for the year ended December 31, 2011 resulted primarily from improved cash earnings from operations. Operating cash inflows in 2011 also included the net proceeds of approximately \$640 million from sales of accounts receivable under our new global trade receivables securitization program that we entered into in June. Cash outflows included approximately \$500 million of trade accounts payable related to fertilizer imports as we can more efficiently fund fertilizer imports through internal sources and \$112 million of payments of accrued export tax obligations in Argentina.

Certain of our operating subsidiaries are primarily funded with U.S. dollar-denominated debt. The functional currency of our operating subsidiaries is generally the local currency and the financial statements are calculated in the functional currency and translated into U.S. dollars. U.S. dollar-denominated loans funding certain short-term borrowing needs of our operating subsidiaries are remeasured into their respective functional currencies at exchange rates at the applicable balance sheet date. The resulting gain or loss is included in our consolidated statements of income as foreign exchange gains or losses. For the years ended December 31, 2012 and December 31, 2011, we recorded foreign exchange gain of \$74 million and a loss \$113 million, respectively, on debt denominated primarily in U.S. dollars at our subsidiaries, which were included as adjustments to reconcile net income to cash used for operating activities in the line item "Foreign exchange loss (gain) on debt" in our consolidated statements of cash flows. This adjustment is required because the cash flow impacts of these gains or losses are recognized as financing activities when the subsidiary repays the underlying debt and therefore, have no impact on cash flows from operations.

Cash used for investing activities was \$967 million in the year ended December 31, 2012 compared to \$1,220 million in 2011. Cash used for investing activities during 2012 related primarily to capital expenditures of \$1,095 million and included investments related to the expansion of our sugar business in

Brazil, investments in edible oil refining and packaging facilities in the U.S. and Canada, construction of a refining facility in India and construction of a port terminal in Brazil.

In 2012, in addition to capital expenditures, we acquired an edible oils and fats business in India for \$94 million (net of cash acquired) consisting of \$77 million in cash and acquired debt of \$17 million. In addition, we acquired an asset management company in Europe for \$9 million net of cash acquired, a controlling interest in a North American wheat milling and bakery mix business for \$102 million in cash (net of cash acquired) and redeemable noncontrolling interest of \$8 million, intellectual property assets for \$22 million and sugarcane milling related biological assets and equipment for \$61 million and a controlling interest in a European oilseed processing and biodiesel joint venture for \$54 million consisting of \$17 million in cash and redeemable noncontrolling interest of \$37 million. Finally, we acquired a margarine business in Poland for \$7 million in cash. Cash used during the year was net of \$448 million proceeds received from the sale of our interest in Solae, a soy ingredients joint venture. We also received a special cash dividend of \$35 million from Solae in connection with the sale of our investment.

During 2011, we acquired a port terminal in Ukraine for \$100 million (net of \$2 million cash acquired), consisting of \$83 million in cash and \$17 million of obligations related to assets under construction, a tomato products business in Brazil for \$97 million, consisting of \$81 million in cash and \$16 million in contingent liabilities, and a margarine business and grain elevator operations in North America for a total of \$28 million. We also sold our investment in a European oilseed processing facility joint venture for cash proceeds of \$54 million and a cost method investment in Russia for net proceeds of \$16 million. Proceeds from the sale or disposal of property, plant and equipment of \$141 million in 2011 included the sale of certain buildings and other equipment.

Investments in affiliates in 2012 included activities related to the construction of an oilseed processing plant in Paraguay, construction of a wet corn milling plant in Argentina, an investment in a palm plantation joint venture in Indonesia and an additional investment in a North America corn ethanol joint venture. Investments in affiliates in 2011 included expansion of grain elevator operations and the acquisition of a fertilizer storage terminal in the U.S., construction of an oilseed processing facility in Paraguay, as well as the establishment of a shipping joint venture.

Cash provided by financing activities was \$1,206 million in the year ended December 31, 2012 compared to cash used of \$1,060 million in 2011. For the year ended December 31, 2012, we had a net increase of \$1,368 million in borrowings primarily due to increased working capital requirements. In 2011, we had a net decrease of \$824 million in borrowings due primarily to debt maturities within the year which were repaid with cash generated from operations. Dividends paid to our common shareholders in the years ended December 31, 2012 and 2011 were \$151 million and \$140 million, respectively. Dividends paid to holders of our convertible preference shares was \$34 million for the years ended December 31, 2012 and 2011. During the

year ended December 31, 2011, in connection with our common share repurchase program, we repurchased 1,933,286 common shares at a cost of \$120 million. There were no shares repurchased during the year ended December 31, 2012. Bunge repurchased 8,647,859 common shares for \$474 million from inception of the program in June 2010 through December 31, 2012.

2011 Compared to 2010. In 2011, our cash and cash equivalents increased by \$257 million, reflecting the net effect of cash flows from operating, investing and financing activities. For the year ended December 31, 2010, our cash and cash equivalents increased by \$25 million, reflecting the net proceeds of \$3.5 billion (included in cash provided by investing activities), net of \$144 million of transaction costs and \$280 million of withholding tax included as a component of cash used for operations, from our Brazilian fertilizer nutrients assets sale, offset by utilization of cash to repay debt, repurchase shares and the net impact of cash flows from other operating, investing and financing activities.

Our operating activities generated cash of \$2,614 million for the year ended December 31, 2011 compared to cash used of \$2,435 million in 2010. The positive cash flows from operating activities for the year ended December 31, 2011 resulted primarily from improved cash earnings from operations. Operating cash inflows in 2011 also included the net proceeds of approximately \$640 million from sales of accounts receivable under our new global trade receivables securitization program that we entered into in June. Cash outflows included approximately \$500 million of trade accounts payable related to fertilizer imports as we can more efficiently fund fertilizer imports through internal sources, and \$112 million of payments of accrued export tax obligations in Argentina. The negative cash flows from operating activities for the year ended December 31, 2010 resulted primarily from higher average working capital needs. Operating cash outflows for 2010 also included \$280 million of withholding taxes and \$144 million of transaction closing costs paid related to the sale of our Brazilian fertilizer nutrients assets and increased working capital needs due to increase in commodity prices.

Certain of our operating subsidiaries are primarily funded with U.S. dollar-denominated debt. The functional currency of our operating subsidiaries is generally the local currency and the financial statements are calculated in the functional currency and translated into U.S. dollars. U.S. dollar-denominated loans funding certain short-term borrowing needs of our operating subsidiaries are remeasured into their respective functional currencies at exchange rates at the applicable balance sheet date. The resulting gain or loss is included in our consolidated statements of income as foreign exchange gains or losses. For the years ended December 31, 2011 and December 31, 2010, we recorded foreign exchange losses of \$113 million and \$75 million, respectively, on debt denominated primarily in U.S. dollars at our subsidiaries, which were included as adjustments to reconcile net income to cash used for operating activities in the line item "Foreign exchange loss (gain) on debt" in our consolidated statements of cash flows. This adjustment is required because the cash flow impacts of these gains or losses are recognized as financing activities when the

subsidiary repays the underlying debt and therefore, have no impact on cash flows from operations.

Cash used for investing activities was \$1,220 million in the year ended December 31, 2011, compared to cash generated of \$2,509 million in 2010, reflecting the proceeds of \$3.5 billion, net of \$144 million transaction costs and \$280 million of withholding tax included as a component of cash used for operations, from the sale of our Brazilian fertilizer nutrients assets. Cash used for investing activities during 2011 related primarily to capital expenditures of \$1,125 million and included investments related to sugarcane planting in Brazil, the completion of our EGT, LLC export terminal in the state of Washington, U.S., as well as other logistics and transportation assets, completion of oilseed processing facilities in China and Vietnam, expansion of our edible oil refining and packaging businesses in Europe, North America and Asia, and investments in management information systems. Proceeds from the sale or disposal of property, plant and equipment of \$141 million in 2011 included the sale of certain buildings and other equipment.

In addition to capital expenditures, we acquired a port terminal in Ukraine for \$100 million (net of \$2 million cash acquired), consisting of \$83 million in cash and \$17 million of obligations related to assets under construction, a tomato products business in Brazil for \$97 million, consisting of \$81 million in cash and \$16 million in contingent liabilities, and a margarine business and grain elevator operations in North America for a total of \$28 million. We also sold our investment in a European oilseed processing facility joint venture for cash proceeds of \$54 million and a cost method investment in Russia for net proceeds of \$16 million.

During 2010, we paid \$80 million to acquire the fertilizer business of Petrobras Argentina S.A., \$48 million in cash in connection with the Moema acquisition, \$64 million to acquire several grain elevators in the U.S. and \$43 million to acquire a U.S. rice milling business. Payments made for capital expenditures in 2010 included investments related to our EGT, LLC export grain terminal facility in the United States, construction of oilseed processing facilities in Vietnam and China, and construction and/or expansion projects at our sugar mills in Brazil. Proceeds from the sale or disposal of property, plant and equipment in 2010 included \$16 million for the sale of certain logistics assets and other equipment.

Investments in affiliates in 2011 included expansion of U.S. grain elevator operations and a fertilizer storage terminal, construction of an oilseed processing facility in Paraguay, as well as the establishment of a shipping joint venture. Investments in affiliates in 2010 included a \$2 million investment in a biofuels joint venture.

Cash used for financing activities was \$1,060 million in the year ended December 31, 2011 compared to cash used of \$30 million in 2010. For the year ended December 31, 2011, we had a net decrease of \$824 million in borrowings due primarily to debt maturities within the year which were repaid with cash generated from operations. In 2010, we had a net increase in borrowings of \$480 million excluding \$555 million of debt assumed in the Moema acquisition and including \$496 million of Moema debt repaid following completion of the acquisition.

Dividends paid to our common shareholders in the years ended December 31, 2011 and December 31, 2010 were \$140 million and \$124 million, respectively. Dividends paid to holders of our convertible preference shares in the year ended December 31, 2011 and December 31, 2010, were \$34 million and \$78 million, respectively. During the year ended December 31, 2011, in connection with our common share repurchase program, we repurchased 1,933,286 common shares at a cost of \$120 million. Bunge repurchased 6,714,573 common shares for \$354 million from inception of the program in June 2010 through December 31, 2010.

Trade Receivables Securitization Program. Our trade receivable securitization program entered into in June 2011, provides us with an additional source of liquidity. The program provides funding for up to \$700 million against receivables sold into the program. The securitization program terminates on June 1, 2016. However, each committed purchaser's commitment to fund trade receivables sold under the securitization program will terminate on May 29, 2013 unless extended for additional 364-day periods in accordance with the terms of the receivables transfer agreement.

At December 31, 2012 and 2011, \$772 million and \$836 million, respectively, of receivables sold under the Program were derecognized from Bunge's consolidated balance sheets. Proceeds received in cash related to transfers of receivables under the program totaled \$13,823 million and \$7,531 million for the year ended December 31, 2012 and the period from inception of the program (June 1, 2011) through December 31, 2011, respectively. In addition, cash collections from customers on receivables previously sold were \$14,031 million and \$6,872 million for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011. As this is a revolving facility, cash collections from customers are reinvested to fund new receivable sales. Gross receivables sold under the program for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011 were \$14,054 million and \$7,778 million, respectively. These sales resulted in discounts of \$19 million and \$5 million for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011, which were included in SG&A in the consolidated statements of income. Servicing fees under the program were not significant in any period.

Bunge's risk of loss following the sale of the accounts receivable is limited to the deferred purchase price receivable, which was \$134 million and \$192 million at December 31, 2012 and 2011, respectively, and is included in other current assets in the consolidated balance sheets (see Note 6 of the notes to the consolidated financial statements). The deferred purchase price will be repaid in cash as receivables are collected, generally within 30 days. Delinquencies and credit losses on accounts receivable sold under the program during the year ended December 31, 2012 and the period from inception of the program through December 31, 2011 were insignificant. Bunge has reflected all cash flows under the securitization program as operating cash flows in the consolidated statements of cash flows for the year ended December 31, 2012 and 2011, including changes in the fair value of the deferred purchase price of \$4 million for the year ended December 31, 2012 and

\$4 million for the period from inception of the program through December 31, 2011.

Brazilian Farmer Credit

Background. We advance funds to farmers, primarily in Brazil, through secured advances to suppliers and prepaid commodity purchase contracts. We also sell fertilizer to farmers, primarily in Brazil, on credit as described below. All of these activities are generally intended to be short-term in nature. The ability of our customers and suppliers to repay these amounts is affected by agricultural economic conditions in the relevant geography, which are, in turn, affected by commodity prices, currency exchange rates, crop input costs and crop quality and yields. As a result, these arrangements are typically secured by the farmer's crop and, in many cases, the farmer's land and other assets. On occasion, Brazilian farm economics in certain regions and certain years, particularly 2005 and 2006, have been adversely affected by factors including volatility in soybean prices, a steadily appreciating Brazilian *real* and poor crop quality and yields. As a result, certain farmers have defaulted on amounts owed. While Brazilian farm economics have improved, some Brazilian farmers continue to face economic challenges due to high debt levels and a strong Brazilian *real*. Upon farmer default, we generally initiate legal proceedings to recover the defaulted amounts. However, the legal recovery process through the judicial system is a long-term process, generally spanning a number of years. As a result, once accounts have been submitted to the judicial process for recovery, we may also seek to renegotiate certain terms with the defaulting farmer in order to accelerate recovery of amounts owed. In addition, we have tightened our credit policies to reduce exposure to higher risk accounts and have increased collateral requirements for certain customers.

Because Brazilian farmer credit exposures are denominated in local currency, reported values are impacted by movements in the value of the Brazilian *real* when translated into U.S. dollars. From December 31, 2011 to December 31, 2012, the Brazilian *real* devalued by approximately 8%, decreasing the reported farmer credit exposure balances when translated into U.S. dollars.

Brazilian Fertilizer Trade Accounts Receivable. In our Brazilian fertilizer operations, customer accounts receivable are intended to be short-term in nature, and are expected to be repaid either in cash or through delivery to Bunge of agricultural commodities when the related crop is harvested. As the farmer's cash flow is seasonal and is typically generated after the crop is harvested, the actual due dates of the accounts receivable are individually determined based upon when a farmer purchases our fertilizer and the anticipated date for the harvest and sale of the farmer's crop. These receivables may also be secured by the farmer's crop. We initiate legal proceedings against customers to collect amounts owed which are in default. In some cases, we have renegotiated amounts that were in legal proceedings, including to secure the subsequent year's crop.

We periodically evaluate the collectability of our trade accounts receivable and record allowances if we determine that collection is doubtful. We base our determination of the

allowance on analyses of credit quality of individual accounts, considering also the economic and financial condition of the farming industry and other market conditions as well as the value of any collateral related to amounts owed. We continuously review defaulted farmer receivables for impairment on an individual account basis. We consider all accounts in legal collections processes to be defaulted and past due. For such accounts, we determine the allowance for uncollectible amounts based on the fair value of the associated collateral, net of estimated costs to sell. For all renegotiated accounts (current and past due), we consider changes in farm economic conditions and other market conditions, our historical experience related to renegotiated accounts and the fair value of collateral in determining the allowance for doubtful accounts.

On December 6, 2012, Bunge entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer business including blending facilities, brands and warehouses. Included in this transaction are current fertilizer trade accounts receivables. Long-term fertilizer receivables are excluded from the transaction. As a result of the entry into the agreement for the sale of the Brazilian fertilizer operations we reassessed the collectability of certain of the long-term receivables as a result of our exit from the Brazilian fertilizer market. This resulted in additional reserves of \$49 million being recorded in 2012.

In addition to our fertilizer trade accounts receivable, we issue guarantees to third parties in Brazil relating to amounts owed these third parties by certain of our customers. These guarantees are discussed under the heading “– Guarantees.”

The table below details our Brazilian fertilizer trade accounts receivable balances and the related allowances for doubtful accounts as of the dates indicated:

(US\$ in millions, except percentages)	DECEMBER 31,	
	2012	2011
Trade accounts receivable (current) ⁽¹⁾	\$ 27	\$178
Allowance for doubtful accounts (current)	5	1
Trade accounts receivable (non-current) ⁽²⁾⁽³⁾	176	230
Allowance for doubtful accounts (non-current) ⁽²⁾	159	129
Total trade accounts receivable (current and non-current)	203	408
Total allowance for doubtful accounts (current and non-current)	164	130
Total allowance for doubtful accounts as a percentage of total trade accounts receivable	81%	32%

(1) 2012 amounts exclude \$189 million of accounts receivable net of a reserve of \$2 million classified as held for sale at December 31, 2012 (see Note 3 to the notes to the consolidated financial statements).

(2) Recorded in other non-current assets in the consolidated balance sheets.

(3) Includes certain amounts related to defaults on customer financing guarantees.

Secured Advances to Suppliers and Prepaid Commodity Contracts. We purchase soybeans through prepaid commodity purchase contracts (advance cash payments to suppliers against contractual obligations to deliver specified quantities of soybeans in the future) and secured advances to suppliers (advances to suppliers against commitments to deliver

soybeans in the future), primarily in Brazil. These financing arrangements are typically secured by the farmer's future crop and mortgages on the farmer's land, buildings and equipment, and are generally settled after the farmer's crop is harvested and sold.

Interest earned on secured advances to suppliers of \$27 million, \$25 million and \$25 million for 2012, 2011 and 2010, respectively, is included in net sales in the consolidated statements of income.

The table below shows details of prepaid commodity contracts and secured advances to suppliers outstanding at our Brazilian operations as of the dates indicated. See Note 12 of the notes to the consolidated financial statements for more information.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Prepaid commodity contracts	\$277	\$ 180
Secured advances to suppliers (current)	396	349
Total (current)	673	529
Soybeans not yet priced ⁽¹⁾	(5)	(346)
Net	668	183
Secured advances to suppliers (non-current)	212	253
Total (current and non-current)	880	436
Allowance for uncollectible advances (current and non-current)	\$ (78)	\$ (73)

(1) Soybeans delivered by suppliers that are yet to be priced are reflected at prevailing market prices at December 31, 2012.

Capital Expenditures

Our cash payments made for capital expenditures were \$1,095 million, \$1,125 million and \$1,072 million in 2012, 2011 and 2010, respectively. We intend to make capital expenditures of approximately \$1,200 million in 2013. Of this amount, we expect that approximately 25% will be used for maintenance, safety and environmental programs. The balance primarily pertains to continued investments to expand our business. We intend to fund these capital expenditures primarily with cash flows from operations.

OFF-BALANCE SHEET ARRANGEMENTS

Guarantees

We have issued or were party to the following guarantees at December 31, 2012:

(US\$ in millions)	MAXIMUM POTENTIAL FUTURE PAYMENTS
Customer financing ⁽¹⁾	\$ 46
Unconsolidated affiliates financing ⁽²⁾	22
Residual value guarantee ⁽³⁾	69
Total	\$137

(1) Bunge has issued guarantees to third parties in Brazil related to amounts owed to these third parties by certain of Bunge's customers. The terms of the guarantees are

equal to the terms of the related financing arrangements, which are generally one year or less, with the exception of guarantees issued under certain Brazilian government programs, primarily from 2006 and 2007, where terms are up to five years. In the event that the customers default on their payments to the third parties and Bunge would be required to perform under the guarantees, Bunge has obtained collateral from the customers. At December 31, 2012, Bunge had approximately \$22 million of tangible property that had been pledged to Bunge as collateral against certain of these refinancing arrangements. Bunge evaluates the likelihood of customer repayments of the amounts due under these guarantees based upon an expected loss analysis and records the fair value of such guarantees as an obligation in its consolidated financial statements. Bunge's recorded obligation related to these outstanding guarantees was \$15 million at December 31, 2012.

(2) Bunge issued guarantees to certain financial institutions related to debt of certain of its unconsolidated joint ventures. The terms of the guarantees are equal to the terms of the related financings which have maturity dates in 2013, 2014 and 2017. There are no recourse provisions or collateral that would enable Bunge to recover any amounts paid under these guarantees. At December 31, 2012, Bunge recorded no obligation related to these guarantees.

(3) Bunge issued guarantees to certain financial institutions which are party to certain operating lease arrangements for railcars and barges. These guarantees provide for a

minimum residual value to be received by the lessor at conclusion of the lease term. These leases expire in 2016. At December 31, 2012, Bunge's recorded obligation related to these guarantees was \$4 million.

In addition, Bunge Limited has provided full and unconditional parent level guarantees of the indebtedness outstanding under certain senior credit facilities and senior notes entered into, or issued by, its 100% owned subsidiaries. At December 31, 2012, our consolidated balance sheet includes debt with a carrying amount of \$4,332 million related to these guarantees. This debt includes the senior notes issued by two of our 100% owned finance subsidiaries, Bunge Limited Finance Corp. and Bunge N.A. Finance L.P. There are no significant restrictions on the ability of Bunge Limited Finance Corp., Bunge N.A. Finance L.P. or any other subsidiary of ours to transfer funds to Bunge Limited.

CONTRACTUAL OBLIGATIONS

The following table summarizes our scheduled contractual obligations and their expected maturities at December 31, 2012, and the effect such obligations are expected to have on our liquidity and cash flows in the future periods indicated.

(US\$ in millions)	PAYMENTS DUE BY PERIOD				
	TOTAL	2013	2014-2015	2016-2017	2018 AND THERE AFTER
Other short-term borrowings ⁽¹⁾	\$ 1,598	\$ 1,598	\$ -	\$ -	\$ -
Variable interest rate obligations ⁽¹⁾	11	6	3	1	1
Long-term debt ⁽¹⁾⁽²⁾	4,206	716	1,218	1,549	723
Interest obligations on fixed rate debt	692	189	264	157	82
Non-cancelable operating lease obligations ⁽³⁾	817	169	225	148	275
Capital commitments	367	304	63	-	-
Freight supply agreements ⁽⁴⁾	568	157	124	58	229
Inventory purchase commitments	67	67	-	-	-
Power supply purchase commitments	4	4	-	-	-
Total contractual cash obligations ⁽⁵⁾⁽⁶⁾	\$8,330	\$3,210	\$1,897	\$1,913	\$1,310

(1) We also have variable interest rate obligations on certain of our outstanding borrowings.

(2) Excludes unamortized net gains of \$45 million related to terminated interest rate swap agreements recorded in long-term debt.

(3) Represents future minimum payments under non-cancelable operating leases with initial or remaining terms of one year or more.

(4) In the ordinary course of business, we enter into purchase commitments for time on ocean freight vessels and freight service on railroad lines for the purpose of transporting agricultural commodities. In addition, we sell time on these ocean freight vessels when excess freight capacity is available. Payments to be received by us under such relet agreements are anticipated to be approximately \$9 million in 2013. These agreements range from two months to approximately five years in the case of ocean freight vessels and 5 to 17 years in the case of railroad services. Actual amounts paid under these contracts may differ due to the variable components of these agreements and the amount of income earned by us on the sale of excess capacity. The railroad freight services agreements require a minimum monthly payment regardless of the actual level of freight services used by us. The costs of our freight supply agreements are typically passed through to our customers as a component of the prices we charge for our products. However, changes in the market value of freight compared to the rates at which we have contracted for freight may affect margins on the sales of agricultural commodities.

(5) Does not include estimated payments of liabilities associated with uncertain income tax positions. As of December 31, 2012, Bunge had gross unrecognized tax liabilities of \$108 million, including related interest and penalties. At this time, we are unable to make a reasonably reliable estimate of the timing of payments in individual years in connection with these tax liabilities; therefore, such amounts are not included in the above contractual obligation table. See Note 14 of the notes to the consolidated financial statements.

(6) Does not include obligations for pension and postretirement benefits for which we expect to make employer contributions of \$62 million in 2013. We also expect to make a significant contribution to our plans in future years.

In addition, we have entered into partnership agreements for the production of sugarcane. These agreements have an average life of five years and cover approximately 228,000 hectares of land under cultivation. Amounts owed under these agreements are dependent on several variables including the quantity of sugarcane produced per hectare, the total recoverable sugar (ATR) per ton of sugarcane produced and

the price for each kilogram of ATR as determined by Consecana, the São Paulo state sugarcane and sugar and ethanol council. In 2012, 2011 and 2010, Bunge made payments related to these agreements of \$181 million, \$91 million and \$61 million, respectively. Of these amounts \$127 million, \$40 million and \$23 million in 2012, 2011 and 2010, respectively, were advances for future production and

\$54 million, \$51 million and \$38 million were included in cost of goods sold in the consolidated statements of income for 2012, 2011 and 2010, respectively.

Employee Benefit Plans

We expect to contribute \$48 million to our defined benefit pension plans and \$14 million to our post-retirement healthcare benefit plans in 2013.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

We believe that the application of the following accounting policies, which are important to our financial position and results of operations, requires significant judgments and estimates on the part of management. For a summary of all of our significant accounting policies, see Note 1 to our consolidated financial statements included in Part III of this Annual Report on Form 10-K.

Allowances for Uncollectible Accounts

Accounts receivable and secured advances to suppliers are stated at the historical carrying amounts net of write-offs and allowances for uncollectible accounts. We establish an allowance for uncollectible trade accounts receivable and secured advances to farmers based on historical experience, farming, economic and other market conditions as well as specific identified customer collection issues. Uncollectible accounts are written off when a settlement is reached for an amount that is less than the outstanding historical balance or when we have determined that collection of the balance is unlikely.

We follow the accounting guidance on the disclosure of the credit quality of financing receivables and the allowance for credit losses which requires information to be disclosed at disaggregated levels, defined as portfolio segments and classes. Based upon an analysis of credit losses and risk factors to be considered in determining the allowance for credit losses, we have determined that the long-term receivables from farmers in Brazil is a single portfolio segment.

We evaluate this single portfolio segment by class of receivables, which is defined as a level of information (below a portfolio segment) in which the receivables have the same initial measurement attribute and a similar method for assessing and monitoring risk. We have identified accounts in legal collection processes and renegotiated amounts as classes of long-term receivables from farmers. Valuation allowances for accounts in legal collection processes are determined by us on individual accounts based on the fair value of the collateral provided as security for the secured advance or credit sale. The fair value is determined using a combination of internal and external resources, including published information concerning Brazilian land values by region. For determination of the valuation allowances for renegotiated amounts, we consider historical experience with the individual farmers, current weather and crop conditions, as well as the fair value of non-crop collateral.

For both classes, a long-term receivable from farmers in Brazil is considered impaired, based on current information and events, if we determine it to be probable that all amounts due under the original terms of the receivable will not be collected. Recognition of interest income on secured advances to farmers is suspended once the farmer defaults on the originally scheduled delivery of agricultural commodities as the collection of future income is determined not to be probable. No additional interest income is accrued from the point of default until ultimate recovery, where amounts collected are credited first against the receivable and then to any unrecognized interest income.

Inventories and Derivatives

We use derivative instruments for the purpose of managing the exposures associated with agricultural commodity prices, transportation costs, foreign currency exchange rates, interest rates and energy costs and for positioning our overall portfolio relative to expected market movements in accordance with established policies and procedures. We are exposed to loss in the event of non-performance by counterparties to certain of these contracts. The risk of non-performance is routinely monitored and adjustments recorded, if necessary, to account for potential non-performance. Different assumptions, changes in economic circumstances or the deterioration of the financial condition of the counterparties to these derivative instruments could result in additional fair value adjustments and increased expense reflected in cost of goods sold, foreign exchange or interest expense. We did not have significant allowances relating to non-performance by counterparties at December 31, 2012, 2011 and 2010.

Our readily marketable commodity inventories, forward purchase and sale contracts, and exchange traded futures and options are primarily valued at fair value. Readily marketable inventories are freely-traded, have quoted market prices, may be sold without significant additional processing and have predictable and insignificant disposal costs. We estimate fair values of commodity inventories and forward purchase and sale contracts based on exchange-quoted prices, adjusted for differences in local markets. Changes in the fair values of these inventories and contracts are recognized in our consolidated statements of income as a component of cost of goods sold. If we used different methods or factors to estimate fair values, amounts reported as inventories and unrealized gains and losses on derivative contracts in the consolidated balance sheets and cost of goods sold could differ. Additionally, if market conditions change subsequent to year-end, amounts reported in future periods as inventories, unrealized gains and losses on derivative contracts and cost of goods sold could differ.

Recoverable Taxes

We evaluate the collectability of our recoverable taxes and record valuation allowances if we determine that collection is doubtful. Recoverable taxes primarily represent value-added or other similar transactional taxes paid on the acquisition of raw materials and other services which can be recovered in cash or as compensation of outstanding balances against income taxes or certain other taxes we may owe. Management's assumption

about the collectability of recoverable taxes requires significant judgment because it involves an assessment of the ability and willingness of the applicable federal or local government to refund the taxes. The balance of these allowances fluctuates depending on the sales activity of existing inventories, purchases of new inventories, percentages of export sales, seasonality, changes in applicable tax rates, cash payment by the applicable government agencies and compensation of outstanding balances against income or certain other taxes owed to the applicable governments. At December 31, 2012 and 2011, the allowance for recoverable taxes was \$105 million and \$98 million, respectively. We continue to monitor the economic environment and events taking place in the applicable countries and in cases where we determine that recovery is doubtful, recoverable taxes are reduced by allowances for the estimated unrecoverable amounts.

Property, Plant and Equipment and Other Finite-Lived Intangible Assets

Long-lived assets include property, plant and equipment and other finite-lived intangible assets. When facts and circumstances indicate that the carrying values of property, plant and equipment assets may be impaired, an evaluation of recoverability is performed by comparing the carrying value of the assets to the projected future cash flows to be generated by such assets. If it appears that the carrying value of our assets is not recoverable, we recognize an impairment loss as a charge against results of operations. Our judgments related to the expected useful lives of property, plant and equipment assets and our ability to realize undiscounted cash flows in excess of the carrying amount of such assets are affected by factors such as the ongoing maintenance of the assets, changes in economic conditions and changes in operating performance. As we assess the ongoing expected cash flows and carrying amounts of our property, plant and equipment assets, changes in these factors could cause us to realize material impairment charges. Bunge recorded no significant impairment charges for the year ended December 31, 2012 or 2011.

In 2010, we recorded pre-tax non-cash impairment charges of \$77 million in cost of goods sold, which consisted of \$42 million related to the write-down of a European oilseed processing and refining facility, \$12 million related to the closure of an older, less efficient oilseed processing facility in the United States and a co-located corn oil extraction line, \$9 million related to the closure of oilseed processing and refining facilities in Europe with restructuring of our European footprint, \$9 million related to a long-term supply contract acquired in connection with a wheat mill acquisition in Brazil, \$3 million related to the write-down of an older and less efficient Brazilian distribution center and \$2 million related to the write-down of an administrative office in Brazil.

Investments in Affiliates

We continually review our equity investments to determine whether a decline in fair value below the cost basis is other-than-temporary. We consider various factors in determining whether to recognize an impairment charge, including the length of time that the fair value of the investment is less than our carrying value, the financial

condition, operating performance and near term prospects of the investment, which include general market conditions specific to the investment or the industry in which it operates, and our intent and ability to hold the investment for a period of time sufficient to allow for the recovery in fair value. In 2012, we recorded \$9 million of pre-tax, non-cash impairment charges in other income (expense)-net and \$1 million in selling, general and administrative expenses in our agribusiness segment relating to the write-down of two separate equity method investments in European biodiesel producers and a related loan to a European biodiesel joint venture. We also recorded \$10 million of pre-tax, non-cash impairment charges in other income (expense)-net and \$29 million in selling, general and administrative expenses in our sugar and bioenergy segment relating to an equity investment in and a related loan to a North American corn ethanol joint venture. The fair values of the investments were determined utilizing projected cash flows of the joint ventures. We did not have any significant impairment charges relating to our equity investments for the year ended December 31, 2011 or 2010.

Goodwill and Other Intangible Assets

Goodwill represents the excess of the purchase price over the fair value of tangible and identifiable intangible net assets acquired in a business acquisition. Goodwill is not amortized, but is tested for impairment annually in the fourth quarter of each fiscal year or whenever there are indicators that the carrying value of the assets may not be fully recoverable.

We use a two-step process to test goodwill at the reporting unit level. Fair value is estimated using a discounted cash flow model which considers forecasted cash flows discounted at an estimated weighted-average cost of capital for each reporting unit. We selected the discounted cash flow methodology as we believe it is comparable to what would be used by market participants. The weighted-average cost of capital is an estimate of the overall after-tax rate of return required by equity and debt market participants of a business enterprise. These analyses require the use of significant judgments, including judgments about appropriate discount rates, growth rates and terminal values and the timing of expected future cash flows. Discount rate assumptions are based on an assessment of the risk inherent in the future cash flows of the respective reporting unit. Sensitivity analyses are performed in order to assess the reasonableness of assumptions.

The first step involves a comparison of the estimated fair value of each reporting unit with its carrying value. If the carrying value exceeds the fair value, the second step of the process is necessary. The second step measures the difference between the carrying value and implied fair value of goodwill. To test indefinite-lived intangible assets for impairment, we compare the fair value of the intangible assets with their carrying values. The fair values of indefinite-lived intangible assets are determined using estimated discount rates. If the carrying value of an intangible asset exceeds its estimated fair value, the intangible asset is considered impaired and is reduced to its fair value. Definite-lived intangible assets are amortized over their estimated useful lives. If estimates or related projections of the fair values of reporting units or indefinite-lived intangible assets change in the future, we may be required to record impairment charges.

We performed our annual impairment tests in the fourth quarters of 2012, 2011 and 2010. For the year ended December 31, 2012, we recorded pre-tax impairment charges of \$514 million for the goodwill in our sugar and bioenergy segment. For all other reporting units, the estimated fair values of the reporting units were determined to be sufficiently in excess of their respective carrying values with no indication of impairment. There were no significant impairment charges relating to goodwill or other indefinite-lived intangible assets for any of the years ended December 31, 2011 and 2010.

Contingencies

We are a party to a large number of claims and lawsuits, primarily tax and labor claims in Brazil and tax claims in Argentina, and have accrued our estimates of the probable costs to resolve these claims. These estimates have been developed in consultation with in-house and outside counsel and are based on an analysis of potential results, assuming a combination of litigation and settlement strategies. Future results of operations for any particular quarterly or annual period could be materially affected by changes in our assumptions or the effectiveness of our strategies relating to these proceedings. For more information on tax and labor claims in Brazil, see "Item 3. Legal Proceedings."

Employee Benefit Plans

We sponsor various U.S. and foreign (primarily in Canada, Europe and Brazil) pension and postretirement benefit plans. In connection with the plans, we make various assumptions in the determination of projected benefit obligations and expense recognition related to pension and postretirement obligations. Key assumptions include discount rates, long-term rates of return on plan assets, asset allocations and rates of future compensation increases. Management develops its assumptions based on its experience and by reference to market related data. All assumptions are reviewed periodically and adjusted as necessary.

A one-percentage point decrease in the aggregate in the assumed discount rate on the U.S. and foreign defined benefit pension and postretirement healthcare benefit plans would increase annual expense by \$9 million and \$2 million, respectively, and would increase the projected benefit obligation by \$97 million and \$25 million, respectively. A one-percentage point increase in the aggregate in the assumed discount rate on the U.S. and foreign defined benefit pension and postretirement healthcare benefit plans would decrease annual expense by \$7 million and \$2 million, respectively, and would decrease the projected benefit obligation by \$77 million and \$22 million, respectively. A one-percentage point increase or decrease in the long-term asset return assumptions on our defined benefit pension plan assets would increase or decrease annual pension expense by \$4 million and \$1 million, respectively.

Income Taxes

We record valuation allowances to reduce our deferred tax assets to the amount that we are likely to realize. We consider projections of future taxable income and prudent tax planning strategies to assess the need for and the size of the valuation allowances. If we determine that we can realize a deferred tax asset in excess of our net recorded amount, we decrease the valuation allowance, thereby increasing net income. Conversely, if we determine that we are unable to realize all or part of our net deferred tax asset, we increase the valuation allowance, thereby decreasing net income.

Prior to recording a valuation allowance, our deferred tax assets were \$1,776 million and \$1,703 million at December 31, 2012 and 2011, respectively. However, we have recorded valuation allowances of \$455 million and \$187 million at December 31, 2012 and 2011, respectively, as a result of uncertainty regarding the recoverability of certain net operating loss carryforwards.

We apply a "more likely than not" threshold to the recognition and de-recognition of tax benefits. The calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations in a multitude of jurisdictions across our global operations. We recognize potential liabilities and record tax liabilities for anticipated tax audit issues in the U.S., Brazil, Argentina and other tax jurisdictions based on our estimate of whether it is more likely than not additional taxes will be due. We adjust these liabilities in light of changing facts and circumstances; however, due to the complexity of some of these uncertainties, the ultimate resolution may result in a payment that is materially different from our current estimate of the tax liabilities. If our estimate of tax liabilities proves to be less than the ultimate assessment, an additional charge to expense would result. If payment of these amounts ultimately proves to be less than the recorded amounts, the reversal of the liabilities would result in tax benefits being recognized in the period when we determined the liabilities are no longer necessary. At December 31, 2012 and 2011, we had recorded tax liabilities of \$108 million and \$116 million, respectively, in our consolidated balance sheets.

NEW ACCOUNTING PRONOUNCEMENTS

Adoption of New Accounting Pronouncements. In May 2011, the Financial Accounting Standards Board (FASB) amended the guidance in Accounting Standards Codification (ASC) Topic 820, *Fair Value Measurement*. This guidance is intended to result in convergence between GAAP and International Financial Reporting Standards (IFRS) requirements for measurement of, and disclosures about, fair value. The amendment clarifies or changes certain fair value measurement principles and enhances the disclosure requirements particularly for Level 3 fair value measurements. The adoption of this standard on January 1, 2012 did not have a material impact on Bunge's consolidated financial statements.

New Accounting Pronouncements. In December 2011, FASB amended the guidance in ASC Topic 210, Balance Sheet. This amendment requires an entity to disclose both gross and net

information about financial instruments that are eligible for offset in the statement of financial position and/or subject to a master netting arrangement or similar agreement. The amendment is effective for annual and interim periods beginning on January 1, 2013 on a retrospective basis for all comparative periods presented. The adoption of this standard may expand Bunge's disclosures but is not expected to impact Bunge's consolidated financial results.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

RISK MANAGEMENT

As a result of our global operating and financing activities, we are exposed to changes in, among other things, agricultural commodity prices, transportation costs, foreign currency exchange rates, interest rates and energy costs which may affect our results of operations and financial position. We actively monitor and manage these various market risks associated with our business activities. Our risk management decisions take place in various locations but exposure limits are centrally set and monitored. We have a corporate risk management group which analyzes and monitors various risk exposures globally, as well as risk management professionals in each of our operating regions. Additionally, our Board of Directors' Finance and Risk Policy Committee oversees, reviews and periodically revises our overall risk management policies and limits.

We use derivative instruments for the purpose of managing the exposures associated with commodity prices, transportation costs, foreign currency exchange rates, interest rates and energy costs and for positioning our overall portfolio relative to expected market movements in accordance with established policies and procedures. We enter into derivative instruments primarily with major financial institutions, commodity exchanges in the case of commodity futures and options, or approved exchange-clearing shipping companies in the case of ocean freight. While these derivative instruments are subject to fluctuations in value, for hedged exposures those fluctuations are generally offset by the changes in fair value of the underlying exposures. The derivative instruments that we use for hedging purposes are intended to reduce the volatility on our results of operations; however, they can occasionally result in earnings volatility, which may be material.

CREDIT AND COUNTERPARTY RISK

Through our normal business activities, we are subject to significant credit and counterparty risks that arise through normal commercial sales and purchases, including forward commitments to buy or sell, and through various other over-the-counter (OTC) derivative instruments that we utilize to manage risks inherent in our business activities. We define credit and counterparty risk as a potential financial loss due to the failure of a counterparty to honor its obligations. The exposure is measured based upon several factors, including unpaid accounts receivable from counterparties and unrealized gains from both cash contracts and OTC derivative instruments (including forward purchase and sale contracts). Credit and counterparty risk also includes sovereign credit risk. We

actively monitor credit and counterparty risk through credit analysis by local credit staffs and review by various local and corporate committees which monitor counterparty performance. We record provisions for counterparty losses from time to time as a result of our credit and counterparty analysis.

During periods of tight conditions in global credit markets, downturns in regional or global economic conditions, and/or significant price volatility, credit and counterparty risks are heightened. This increased risk is monitored through, among other things, increased communication with key counterparties, management reviews and specific focus on counterparties or groups of counterparties that we may determine as high risk. In addition, we have limited new credit extensions in certain cases and reduced our use of non-exchange cleared derivative instruments.

COMMODITIES RISK

We operate in many areas of the food and feed industries, from agricultural raw materials to the production and sale of branded food ingredients. As a result, we purchase and/or produce various materials, many of which are agricultural commodities, including: soybeans, soybean oil, soybean meal, softseeds (including sunflower seed, rapeseed and canola) and related oil and meal derived from them, wheat and corn. In addition, we grow and purchase sugarcane to produce sugar, ethanol and electricity. Agricultural commodities are subject to price fluctuations due to a number of unpredictable factors that may create price risk. As described above, we are also subject to the risk of counterparty non-performance under forward purchase or sale contracts. From time to time, we have experienced instances of counterparty non-performance, including as a result of significant declines in counterparty profitability under these contracts due to significant movements in commodity prices between the time the contracts were executed and the contractual forward delivery period.

We enter into various agricultural commodity derivative contracts with the primary objective of managing our exposure to adverse price movements in the agricultural commodities used for and produced in our business operations. We have established policies that limit the amount of unhedged fixed price agricultural commodity positions permissible for our operating companies, which are generally a combination of volume and value-at-risk (VaR) limits. We measure and review our net commodities position on a daily basis.

Our daily net agricultural commodity position consists of inventory, forward purchase and sale contracts, and over-the-counter and exchange traded derivative instruments, including those used to hedge portions of our production requirements. The fair value of that position is a summation of the fair values calculated for each agricultural commodity by valuing all of our commodity positions at quoted market prices for the period where available or utilizing a close proxy. VaR is calculated on the net position and monitored at the 95% and 99% confidence intervals. In addition, scenario analysis and stress testing are performed. For example, one measure of market risk is estimated as the potential loss in fair value resulting from a hypothetical 10% adverse change in prices.

The results of this analysis, which may differ from actual results, are as follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31, 2012		YEAR ENDED DECEMBER 31, 2011	
	FAIR VALUE	MARKET RISK	FAIR VALUE	MARKET RISK
Highest long position	\$2,500	\$(250)	\$1,993	\$(199)
Highest short position	(129)	(13)	(551)	(55)

OCEAN FREIGHT RISK

Ocean freight represents a significant component of our operating costs. The market price for ocean freight varies depending on the supply and demand for ocean vessels, global economic conditions and other factors. We enter into time charter agreements for time on ocean freight vessels based on forecasted requirements for the purpose of transporting agricultural commodities. Our time charter agreements generally have terms ranging from two months to approximately eight years. We use financial derivatives, known as freight forward agreements, to hedge portions of our ocean freight costs. The ocean freight derivatives are included in other current assets and other current liabilities on the consolidated balance sheets at fair value.

ENERGY RISK

We purchase various energy commodities such as bunker fuel, electricity and natural gas that are used to operate our manufacturing facilities and ocean freight vessels. The energy commodities are subject to price risk. We use financial derivatives, including exchange traded and OTC swaps and options for various purposes, including to manage our exposure to volatility in energy costs. These energy derivatives are included in other current assets and other current liabilities on the consolidated balance sheets at fair value.

CURRENCY RISK

Our global operations require active participation in foreign exchange markets. Our primary foreign currency exposures are the Brazilian *real*, the *euro* and other European currencies, the Argentine *peso* and the Chinese *yuan/renminbi*. To reduce the risk arising from foreign exchange rate fluctuations, we enter into derivative instruments, such as forward contracts and swaps and foreign currency options. The changes in market value of such contracts have a high correlation to the price changes in the related currency exposures. The potential loss in fair value for such net currency position resulting from a hypothetical 10% adverse change in foreign currency exchange rates as of December 31, 2012 was not material.

When determining our exposure, we exclude intercompany loans that are deemed to be permanently invested. The repayments of permanently invested intercompany loans are not planned or anticipated in the foreseeable future and therefore are treated as analogous to equity for accounting purposes. As a result, the foreign exchange gains and losses on these borrowings are excluded from the determination of net income and recorded as a component of accumulated

other comprehensive income (loss) in the consolidated balance sheets. Included in other comprehensive income (loss) are foreign exchange losses of \$295 million and \$548 million for the years ended December 31, 2012 and 2011, respectively, related to permanently invested intercompany loans.

INTEREST RATE RISK

We have debt in fixed and floating rate instruments. We are exposed to market risk due to changes in interest rates. We may enter into interest rate swap agreements to manage our interest rate exposure related to our debt portfolio.

The aggregate fair value of our short and long-term debt, based on market yields at December 31, 2012, was \$6,179 million with a carrying value of \$5,849 million.

A hypothetical 100 basis point increase in the interest yields on our debt at December 31, 2012 would result in a decrease of approximately \$113 million in the fair value of our debt. Similarly, a decrease of 100 basis points in the interest yields on our debt at December 31, 2012 would cause an increase of approximately \$118 million in the fair value of our debt.

A hypothetical 1% change in LIBOR would result in a change of approximately \$29 million in our interest expense. Some of our variable rate debt is denominated in currencies other than in U.S. dollars and is indexed to non-U.S. dollar-based interest rate indices, such as EURIBOR and TJLP. As such, the hypothetical 1% change in interest rate ignores the potential impact of any currency movements.

Derivative Instruments

Interest Rate Derivatives. Interest rate swaps used by us as hedging instruments are recorded at fair value in the consolidated balance sheets with changes in fair value recorded contemporaneously in earnings. Certain of these swap agreements may be designated as fair value hedges. The carrying amount of the associated hedged debt is also adjusted through earnings for changes in the fair value arising from changes in benchmark interest rates. Ineffectiveness is recognized to the extent that these two adjustments do not offset. We may enter into interest rate swap agreements for the purpose of managing certain of our interest rate exposures. We may also enter into interest rate basis swap agreements that do not qualify as hedges for accounting purposes. Changes in fair value of such interest rate basis swap agreements are recorded in earnings. There were no outstanding interest rate swap agreements as of December 31, 2012 or 2011.

We recognized approximately zero, \$6 million and \$9 million as a reduction in interest expense in the consolidated statements of income for the years ended December 31, 2012, 2011 and 2010, respectively, relating to interest rate swap agreements outstanding during the respective periods. In addition, during the years ended December 31, 2012, 2011 and 2010, we recognized gains of approximately \$20 million, \$13 million and \$11 million, respectively, as a reduction of interest expense in the consolidated statements of income, related to the amortization of deferred gains on termination of interest rate swap agreements.

Foreign Exchange Derivatives. We use a combination of foreign exchange forward swap and option contracts in certain of our operations to mitigate the risk from exchange rate fluctuations in connection with certain commercial and balance sheet exposures. The foreign exchange forward swap and option contracts may be designated as cash flow hedges. We may also use net investment hedges to partially offset the translation adjustments arising from the remeasurement of our investment in certain of our foreign subsidiaries.

We assess, both at the inception of the hedge and on an ongoing basis, whether the derivatives that are used in hedge transactions are highly effective in offsetting changes in the hedged items.

The table below summarizes the notional amounts of open foreign exchange positions.

(US\$ in millions)	DECEMBER 31, 2012			
	EXCHANGE TRADED	NON-EXCHANGE		UNIT OF MEASURE

(1) Exchange traded futures and options are presented on a net (short) and long position basis.

(2) Non-exchange traded swaps, options and forwards are presented on a gross (short) and long position basis.

Commodity Derivatives. We use derivative instruments to primarily manage exposure to movements associated with agricultural commodity prices. We generally use exchange traded futures and options contracts to minimize the effects of changes in the prices of agricultural commodities on agricultural commodity inventories and forward purchase and sale contracts, but may also from time to time enter into OTC commodity transactions, including swaps, which are settled in cash at maturity or termination based on exchange-quoted futures prices. Changes in fair values of exchange traded futures contracts representing the unrealized gains and/or losses on these instruments are settled daily generally through our wholly-owned futures clearing subsidiary. Forward purchase and sale contracts are primarily settled through delivery of agricultural commodities. While we consider these exchange traded futures and forward purchase and sale contracts to be effective economic hedges, we do not designate or account for the majority of our commodity contracts as hedges. Changes in fair values of these contracts and related readily marketable agricultural commodity inventories are included in cost of goods sold in the consolidated statements of income. The forward contracts require performance of both us and the contract counterparty in future periods. Contracts to purchase agricultural commodities generally relate to current or future crop years for delivery periods quoted by regulated commodity exchanges.

Contracts for the sale of agricultural commodities generally do not extend beyond one future crop cycle.

The table below summarizes the volumes of open agricultural commodities derivative positions.

(2) Non-exchange traded swaps, options and forwards are presented on a gross (short) and long position basis.

Ocean Freight Derivatives. We use derivative instruments referred to as freight forward agreements, or FFAs, and FFA options to hedge portions of our current and anticipated ocean freight costs. A portion of the ocean freight derivatives may be designated as fair value hedges of our firm commitments to purchase time on ocean freight vessels. Changes in the fair value of the ocean freight derivatives that are qualified, designated and highly effective as a fair value hedge, along with the gain or loss on the hedged firm commitments to purchase time on ocean freight vessels that is attributable to the hedged risk, are recorded in earnings. Changes in the fair values of ocean freight derivatives that are not designated as hedges are also recorded in earnings.

The table below summarizes the open ocean freight positions.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Our financial statements and related schedule required by this item are contained on pages F-1 through F-74 and on page E-1 of this Annual Report on Form 10-K. See Item 15(a) for a listing of financial statements provided.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

DISCLOSURE CONTROLS AND PROCEDURES

Disclosure controls and procedures are the controls and other procedures that are designed to provide reasonable assurance that information required to be disclosed by the issuer in the reports that it files or submits under the Securities Exchange Act of 1934, as amended (the "Exchange Act") is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by an issuer in the reports that it files or submits under the Exchange Act is accumulated and communicated to the issuer's management, including the principal executive and principal financial officer, or persons performing similar functions, as appropriate, to allow timely decisions regarding required disclosure.

As of December 31, 2012, we carried out an evaluation, under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures, as that term is defined in

Exchange Act Rules 13a-15(e) and 15d-15(e), as of the end of the period covered by this Annual Report on Form 10-K. Based upon that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that our disclosure controls and procedures were effective at the reasonable assurance level as of the end of the fiscal year covered by this Annual Report on Form 10-K.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Bunge Limited's management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f). Bunge Limited's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. Generally Accepted Accounting Principles.

Under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of the end of the fiscal year covered by this annual report based on the framework in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Based on this assessment, management concluded that Bunge Limited's internal control over financial reporting was effective as of the end of the fiscal year covered by this annual report.

Deloitte & Touche LLP, the independent registered public accounting firm that has audited and reported on Bunge Limited's consolidated financial statements included in this annual report, has issued its written attestation report on Bunge Limited's internal control over financial reporting, which is included in this Annual Report on Form 10-K.

CHANGES IN INTERNAL CONTROL OVER FINANCIAL REPORTING

In connection with the restructuring and consolidation of Bunge's operations in Brazil and related commercial, organizational and personnel changes, management has been and continues to review and, in some cases, implement new or enhanced systems and procedures that have led, or are expected to lead, to changes in internal control over financial reporting in Bunge's Brazilian operations.

Except as described above, there has been no change in our internal control over financial reporting during the fourth fiscal quarter ended December 31, 2012 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

Our management, including our Chief Executive Officer and our Chief Financial Officer, does not expect that our disclosure controls or our internal control over financial reporting will

prevent or detect all error and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, within the company have been detected. These inherent limitations include the realities that judgments in decision-

making can be faulty and that breakdowns can occur because of simple error or mistake. Controls may also be circumvented by the individual acts of some persons, by collusion of two or more people or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of
Bunge Limited
White Plains, New York

We have audited the internal control over financial reporting of Bunge Limited and subsidiaries (the “Company”) as of December 31, 2012, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company’s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management’s Report on Internal Control Over Financial Reporting*. Our responsibility is to express an opinion on the Company’s internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company’s internal control over financial reporting is a process designed by, or under the supervision of, the company’s principal executive and principal financial officers, or persons performing similar functions, and effected by the company’s board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2012 of the Company and our report dated March 1, 2013 expressed an unqualified opinion on the consolidated financial statements and financial statement schedule.

ITEM 9B. OTHER INFORMATION

None.

PART III

Information required by Items 10, 11, 12, 13 and 14 of Part III is omitted from this Annual Report on Form 10-K and will be filed in a definitive proxy statement for our 2013 Annual General Meeting of Shareholders.

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS, AND CORPORATE GOVERNANCE

We will provide information that is responsive to this Item 10 in our definitive proxy statement for our 2013 Annual General Meeting of Shareholders under the captions “Election of Directors,” “Section 16(a) Beneficial Ownership Reporting Compliance,” “Corporate Governance – Board Meetings and Committees – Audit Committee,” “Corporate Governance – Board Composition and Independence,” “Audit Committee Report,” “Corporate Governance – Corporate Governance Guidelines and Code of Ethics” and possibly elsewhere therein. That information is incorporated in this Item 10 by reference. The information required by this item with respect to our executive officers and key employees is found in Part I of this Annual Report on Form 10-K under the caption “Executive Officers and Key Employees of the Company,” which information is incorporated herein by reference.

ITEM 11. EXECUTIVE COMPENSATION

We will provide information that is responsive to this Item 11 in our definitive proxy statement for our 2013 Annual General Meeting of Shareholders under the captions “Executive Compensation,” “Director Compensation,” “Compensation Committee Report,” and possibly elsewhere therein. That information is incorporated in this Item 11 by reference.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

We will provide information that is responsive to this Item 12 in our definitive proxy statement for our 2013 Annual General

Meeting of Shareholders under the caption “Share Ownership of Directors, Executive Officers and Principal Shareholders” and possibly elsewhere therein. That information is incorporated in this Item 12 by reference. The information required by this item with respect to our equity compensation plan information is found in Part II of this Annual Report on Form 10-K under the caption “Equity Compensation Plan Information,” which information is incorporated herein by reference.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

We will provide information that is responsive to this Item 13 in our definitive proxy statement for our 2013 Annual General Meeting of Shareholders under the captions “Corporate Governance – Board Composition and Independence,” “Certain Relationships and Related Party Transactions” and possibly elsewhere therein. That information is incorporated in this Item 13 by reference.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

We will provide information that is responsive to this Item 14 in our definitive proxy statement for our 2013 Annual General Meeting of Shareholders under the caption “Appointment of Independent Auditor” and possibly elsewhere therein. That information is incorporated in this Item 14 by reference.

PART IV

ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES

a. (1) (2) Financial Statements and Financial Statement Schedules

See “Index to Consolidated Financial Statements” on page F-1 and Financial Statement Schedule II – Valuation and Qualifying Accounts on page E-1 of this Annual Report on Form 10-K.

a. (3) Exhibits

The exhibits listed in the accompanying index to exhibits are filed or incorporated by reference as part of this Form 10-K.

Certain of the agreements filed as exhibits to this Form 10-K contain representations and warranties by the parties to the agreements that have been made solely for the benefit of the parties to the agreement, which may have been included in the agreement for the purpose of allocating risk between the parties rather than establishing matters as facts and may have been qualified by disclosures that were made to the parties in connection with the negotiation of these agreements and not necessarily reflected in the agreements. Accordingly, the representations and warranties contained in these agreements may not describe the actual state of affairs of Bunge Limited or its subsidiaries as of the date that these representations and warranties were made or at any other time. Investors should not rely on these representations and warranties as statements of fact. Additional information about Bunge Limited and its subsidiaries may be found elsewhere in this Annual Report on Form 10-K and Bunge Limited’s other public filings, which are available without charge through the SEC’s website at www.sec.gov.

See “Index to Exhibits” set forth below.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of
Bunge Limited
White Plains, New York

We have audited the accompanying consolidated balance sheets of Bunge Limited and subsidiaries (the “Company”) as of December 31, 2012 and 2011, and the related consolidated statements of income, comprehensive income (loss), changes in equity and redeemable noncontrolling interests, and cash flows for each of the three years in the period ended December 31, 2012. Our audits also included the financial statement schedule listed in the Index at Item 15. These financial statements and financial statement schedule are the responsibility of the Company’s management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Bunge Limited and subsidiaries as of December 31, 2012 and 2011, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2012, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company’s internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 1, 2013 expressed an unqualified opinion on the Company’s internal control over financial reporting.

The accompanying notes are an integral part of these consolidated financial statements.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF BUSINESS, BASIS OF PRESENTATION, AND SIGNIFICANT ACCOUNTING POLICIES

Description of Business – Bunge Limited, a Bermuda holding company, together with its consolidated subsidiaries and variable interest entities (VIEs) in which it is considered the primary beneficiary, through which its businesses are conducted (collectively Bunge), is an integrated, global agribusiness and food company. Bunge's common shares trade on the New York Stock Exchange under the ticker symbol "BG." Bunge operates in four divisions, which include five reportable segments: agribusiness, sugar and bioenergy, edible oil products, milling products and fertilizer.

Agribusiness – Bunge's agribusiness segment is an integrated business involved in the purchase, storage, transport, processing and sale of agricultural commodities and commodity products. Bunge's agribusiness operations and assets are located in North America, South America, Europe and Asia with merchandising and distribution offices throughout the world.

Bunge's agribusiness segment also participates in related financial activities, such as offering trade structured finance, which leverages its international trade flows, providing risk management services to customers by assisting them with managing price exposure to agricultural commodities and developing private investment vehicles to invest in businesses complementary to Bunge's commodities operations.

Sugar and Bioenergy – Bunge's sugar and bioenergy segment includes its sugar and ethanol production activities in Brazil, global sugar merchandising and distribution, as well as ethanol production investments and related activities. This reportable segment is an integrated business involved in the growing and harvesting of sugarcane from land owned or managed through agricultural partnership agreements and additional sourcing of sugarcane from third parties to be processed at its eight mills in Brazil to produce sugar, ethanol and electricity. Five of these mills were acquired in 2010. The sugar and bioenergy segment is also a merchandiser and distributor of sugar and ethanol within Brazil and a global merchandiser and distributor of sugar through its office in London and trading offices in Geneva and Singapore. In addition, the segment includes minority investments in U.S. corn-based ethanol producers.

Edible oil products – Bunge's edible oil products segment produces and sells edible oil products, such as packaged and bulk oils, shortenings, margarine, mayonnaise and other products derived from the vegetable oil refining process. Bunge's edible oil products operations are located in North America, Europe, Brazil, China and India.

Milling products – Bunge's milling products segment includes wheat, corn and rice milling businesses, which purchase wheat, corn and rice directly from growers and dealers and process them into milled products for food processors, bakeries,

brewers, snack food producers and other customers. Bunge's wheat milling activities are primarily in Brazil and Mexico. Corn and rice milling activities are in the United States.

Fertilizer – Bunge's fertilizer segment has operated as a blender of NPK (nitrogen, phosphate and potassium) fertilizer formulas in Brazil, producer and distributor of mixed nutrients and liquid fertilizer products to farmers and distributors in Argentina and a distributor of blended fertilizers to farmers and retailers in the United States. Bunge also has a joint venture with Office Chérifien des Phosphates (OCP) to produce fertilizer products in Morocco (see Note 11).

Historically, Bunge was involved in every stage of the fertilizer business in Brazil, from mining of phosphate-based raw materials to the sale of blended fertilizer products. In May 2010, Bunge sold its fertilizer nutrients assets in Brazil, including its phosphate mining assets and its investment in Fosfertil S.A., a phosphate and nitrogen producer (see Note 3). On December 7, 2012, Bunge announced a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer distribution business, including blending facilities, brands and warehouses, for \$750 million in cash. This transaction is subject to customary closing conditions, including the receipt of regulatory approvals in Brazil and is expected to close in 2013. In addition, on December 31, 2012, Bunge agreed to sell its interest in a North American fertilizer distribution joint venture to GROWMARK, Inc., its partner in the joint venture. Results of operations of the fertilizer distribution business in Brazil and the North American fertilizer distribution joint venture have been reclassified as discontinued operations for all periods presented (see Note 3). Assets and liabilities subject to the purchase and sale agreement have been classified as held for sale as of December 31, 2012. Results of operations of the Brazilian fertilizer nutrients assets for the year ended December 31, 2010, remain in continuing operations for that year.

Basis of Presentation – The consolidated financial statements are prepared in conformity with accounting principles generally accepted in the United States of America (GAAP).

During the preparation of the consolidated financial statements for the year ended December 31, 2012, Bunge revised its balance sheet presentation related to a certain trade structured finance program (the Program) that has been in existence, in its current form, since 2006. Bunge has corrected the 2011 consolidated financial statements to conform with this presentation. Prior to 2012, Bunge reported the assets and related liabilities of this Program on a net basis in its consolidated balance sheets, rather than on a gross basis.

The Program involves letters of credit (LCs) associated with export commodity trade flows that Bunge obtains from financial institutions, foreign exchange forward contracts hedging these obligations and time deposits with the same financial

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF BUSINESS, BASIS OF PRESENTATION, AND SIGNIFICANT ACCOUNTING POLICIES (Continued)

institutions. All of these instruments are subject to legally enforceable set-off agreements.

The change in presentation resulted in an increase in our current assets and current liabilities of \$1,946 million for the year ended December 31, 2011 (see Note 4). The change in presentation had no impact on Bunge's net assets, operating results, or cash flows for any period. All cash flows under this Program are included in operating activities in the consolidated statements of cash flows.

Discontinued Operations — In determining whether a group of assets disposed (or to be disposed) of should be presented as discontinued operations, Bunge makes a determination of whether the group of assets being disposed of comprises a component of the entity; that is, whether it has historical operations and cash flows that can be clearly distinguished (both operationally and for financial reporting purposes). Bunge also determines whether the cash flows associated with the group of assets have been significantly (or will be significantly) eliminated from the ongoing operations of Bunge as a result of the disposal transaction and whether Bunge has no significant continuing involvement in the operations of the group of assets after the disposal transaction. If these determinations can be made affirmatively, the results of operations of the group of assets being disposed of (as well as any gain or loss on the disposal transaction) are aggregated for separate presentation apart from the continuing operations of the Company in the consolidated financial statements (see Note 3).

Principles of Consolidation — The accompanying consolidated financial statements include the accounts of Bunge, its subsidiaries and VIEs in which Bunge is considered to be the primary beneficiary, and as a result, include the assets, liabilities, revenues and expenses of all entities over which Bunge exercises control. Equity investments in which Bunge has the ability to exercise significant influence but does not control are accounted for by the equity method of accounting. Investments in which Bunge does not exercise significant influence are accounted for by the cost method of accounting. Intercompany accounts and transactions are eliminated. Bunge consolidates VIEs in which it is considered the primary beneficiary and reconsiders such conclusion at each reporting period. An enterprise is determined to be the primary beneficiary if it has a controlling financial interest under GAAP, defined as (a) the power to direct the activities of a VIE that most significantly impact the VIE's business and (b) the obligation to absorb losses of or the right to receive benefits from the VIE that could potentially be significant to the VIE's operations. Performance of that analysis requires the exercise of judgment. Where Bunge has an interest in an entity that has qualified for the deferral of the consolidation rules, it follows consolidation rules prior to January 1, 2010. These rules require an analysis to (a) determine whether an entity in which Bunge has a variable interest is a VIE and (b) whether Bunge's

involvement, through the holding of equity interests directly or indirectly in the entity or contractually through other variable interests, would be expected to absorb a majority of the variability of the entity. This latter evaluation resulted in the consolidation of certain private equity and other investment funds (the consolidated funds) related to an asset management business acquisition completed in 2012.

The consolidated funds are, for GAAP purposes, investment companies and therefore are not required to consolidate their majority owned and controlled investments. Rather, Bunge reflects these investments at fair value. In addition, certain of these consolidated funds have limited partner investors with investments in the form of equity, which are accounted for as noncontrolling interests and investments in the form of debt for which Bunge has elected the fair value option (see Note 2).

Noncontrolling interests related to Bunge's ownership interests of less than 100% is reported as noncontrolling interests in subsidiaries in the consolidated balance sheets. The noncontrolling ownership interests in Bunge's earnings, net of tax, is reported as net (income) loss attributable to noncontrolling interests in the consolidated statements of income.

Reclassifications — Certain prior year amounts have been reclassified to conform to current year presentation.

Use of Estimates — The preparation of consolidated financial statements requires the application of accounting policies that often involve substantial judgment or estimation in their application. These judgments and estimations may significantly affect reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. They may also affect reported amounts of revenues and expenses. The policies Bunge considers to be most dependent on the application of estimates and assumptions include allowances for doubtful accounts, valuation allowances for recoverable taxes and deferred tax assets, impairment of long-lived assets and unconsolidated affiliates, restructuring charges, useful lives of property, plant and equipment and intangible assets, contingent liabilities, liabilities for unrecognized tax benefits and pension plan obligations. In addition, significant management estimates and assumptions are required in allocating the purchase price paid in business acquisitions to the assets and liabilities acquired (see Note 2) and the determination of fair values of Level 3 assets and liabilities (see Note 15).

Translation of Foreign Currency Financial Statements — Bunge's reporting currency is the U.S. dollar. The functional currency of the majority of Bunge's foreign subsidiaries is their local currency and, as such, amounts included in the consolidated statements of income, comprehensive income (loss), cash flows and changes in equity are translated using average exchange rates during each period. Assets and liabilities are translated at period-end exchange rates and resulting foreign exchange translation adjustments are recorded in the consolidated

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF BUSINESS, BASIS OF PRESENTATION, AND SIGNIFICANT ACCOUNTING POLICIES (Continued)

balance sheets as a component of accumulated other comprehensive income (loss).

Foreign Currency Transactions – Monetary assets and liabilities denominated in currencies other than the functional currency are remeasured into their respective functional currencies at exchange rates in effect at the balance sheet date. The resulting exchange gain or loss is included in Bunge's consolidated statements of income as foreign exchange gain (loss) unless the remeasurement gain or loss relates to an intercompany transaction that is of a long-term investment nature and for which settlement is not planned or anticipated in the foreseeable future. Gains or losses arising from translation of such transactions are reported as a component of accumulated other comprehensive income (loss) in Bunge's consolidated balance sheets.

Cash and Cash Equivalents – Cash and cash equivalents include time deposits and readily marketable securities with original maturity dates of three months or less at the time of acquisition.

Trade Accounts Receivable and Secured Advances to Suppliers – Accounts receivable and secured advances to suppliers are stated at their historical carrying amounts net of write-offs and allowances for uncollectible accounts. Bunge establishes an allowance for uncollectible trade accounts receivable and secured advances to farmers based on historical experience, farming economics and other market conditions as well as specific customer collection issues. Uncollectible accounts are written off when a settlement is reached for an amount below the outstanding historical balance or when Bunge has determined that collection is unlikely.

Secured advances to suppliers bear interest at contractual rates which reflect current market interest rates at the time of the transaction. There are no deferred fees or costs associated with these receivables. As a result, there are no imputed interest amounts to be amortized under the interest method. Interest income is calculated based on the terms of the individual agreements and is recognized on an accrual basis.

Bunge follows accounting guidance on the disclosure of the credit quality of financing receivables and the allowance for credit losses which requires information to be disclosed at disaggregated levels, defined as portfolio segments and classes. Based upon its analysis of credit losses and risk factors to be considered in determining the allowance for credit losses, Bunge has determined that the long-term receivables from farmers in Brazil is a single portfolio segment.

Bunge evaluates this single portfolio segment by class of receivables, which is defined as a level of information (below a portfolio segment) in which the receivables have the same initial measurement attribute and a similar method for assessing and monitoring risk. Bunge has identified accounts

in legal collection processes and renegotiated amounts as classes of long-term receivables from farmers. Valuation allowances for accounts in legal collection processes are determined on individual accounts based on the fair value of the collateral provided as security. The fair value is determined using a combination of internal and external resources, including published information concerning Brazilian land values by region. For determination of valuation allowances for renegotiated amounts, Bunge considers historical experience with individual farmers, current weather and crop conditions and the fair value of non-crop collateral.

For both classes, a receivable is considered impaired, based on current information and events, if Bunge determines it probable that all amounts due under the original terms of the receivable will not be collected. Recognition of interest income is suspended once the farmer defaults on the originally scheduled delivery of agricultural commodities as the collection of future income is determined not to be probable. No additional interest income is accrued from the point of default until ultimate recovery, at which time amounts collected are credited first against the receivable and then to any unrecognized interest income.

Inventories – Readily marketable inventories are agricultural commodity inventories that are readily convertible to cash because of their commodity characteristics, widely available markets and international pricing mechanisms. The majority of Bunge's readily marketable inventories are valued at fair value. These agricultural commodity inventories have quoted market prices in active markets, may be sold without significant further processing and have predictable and insignificant disposal costs. Changes in the fair values of merchandisable agricultural commodities inventories are recognized in earnings as a component of cost of goods sold. Also included in readily marketable inventories is sugar produced by our sugar mills in Brazil; these inventories are stated at the lower of average cost or market.

Inventories other than readily marketable inventories are stated at the lower of cost or market by inventory product class. Cost is determined using primarily the weighted-average cost method.

Derivative Instruments and Hedging Activities – Bunge enters into derivative instruments to manage its exposure to movements associated with agricultural commodity prices, transportation costs, foreign currency exchange rates, interest rates and energy costs. Bunge's use of these instruments is generally intended to mitigate the exposure to market variables (see Note 15).

Generally, derivative instruments are recorded at fair value in other current assets or other current liabilities in Bunge's consolidated balance sheets. Bunge assesses, both at the inception of a hedge and on an ongoing basis, whether any derivatives designated as hedges are highly effective in offsetting changes in the hedged items. The effective and

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF BUSINESS, BASIS OF PRESENTATION, AND SIGNIFICANT ACCOUNTING POLICIES (Continued)

ineffective portions of changes in fair values of derivative instruments designated as fair value hedges, along with the gains or losses on the related hedged items are recorded in earnings in the consolidated statements of income in the same caption as the hedged items. The effective portion of changes in fair values of derivative instruments that are designated as cash flow hedges are recorded in accumulated other comprehensive income (loss) and are reclassified to earnings when the hedged cash flows are realized or when the hedge is no longer considered to be effective. In addition, Bunge may designate certain derivative instruments as net investment hedges to hedge the exposure associated with its equity investments in foreign operations. The effective portions of changes in the fair values of net investment hedges, which are evaluated based on spot rates, are recorded in the foreign exchange translation adjustment component of accumulated other comprehensive income (loss) in the consolidated balance sheets and the ineffective portions of such derivative instruments are recorded in foreign exchange gain (loss) in the consolidated statements of income.

Recoverable Taxes – Recoverable taxes include value-added taxes paid upon the acquisition of raw materials and taxable services and other transactional taxes which can be recovered in cash or as compensation against income taxes or other taxes owed by Bunge, primarily in Brazil. These recoverable tax payments are included in other current assets or other non-current assets based on their expected realization. In cases where Bunge determines that recovery is doubtful, recoverable taxes are reduced by allowances for the estimated unrecoverable amounts.

Property, Plant and Equipment, Net – Property, plant and equipment, net is stated at cost less accumulated depreciation and depletion. Major improvements that extend the life, capacity or efficiency or improve the safety of an asset are capitalized, while maintenance and repairs are expensed as incurred. Costs related to legal obligations associated with the future retirement of capitalized assets are capitalized as part of the cost of the related asset. Bunge generally capitalizes eligible costs to acquire or develop internal-use software that are incurred during the application development stage. Interest costs on borrowings during construction/completion periods of major capital projects are also capitalized.

Included in property, plant and equipment are biological assets, primarily sugarcane, that are stated at cost less accumulated depletion. The remaining useful lives of Bunge's biological assets range from one to six years. Depletion is calculated using the estimated units of production based on the remaining useful life of the growing sugarcane. Depreciation is computed based on the straight line method over the estimated useful lives of the assets.

Useful lives for property, plant and equipment are as follows:

	YEARS
Buildings	10 - 50
Machinery and equipment	7 - 20
Furniture, fixtures and other	3 - 20
Computer software	3 - 10

Goodwill – Goodwill represents the cost in excess of the fair value of net assets acquired in a business acquisition. Goodwill is not amortized but is tested annually for impairment or between annual tests if events or circumstances indicate potential impairment. Bunge's annual impairment testing is generally performed during the fourth quarter of its fiscal year.

Goodwill is tested for impairment at the reporting unit level. For the majority of Bunge's recorded goodwill, the reporting unit is equivalent to Bunge's reportable segments.

Bunge has recorded goodwill in all reporting segments with the majority of its total recorded goodwill in the sugar and bioenergy and agribusiness segments (see Note 8).

Bunge's 2012 annual impairment test of goodwill allocated to the sugar and bioenergy segment resulted in an impairment charge of \$514 million (see Note 8).

Impairment of Property, Plant and Equipment and Finite-Lived Intangible Assets – Finite-lived intangible assets include primarily trademarks, customer lists and port facility usage rights and are amortized on a straight-line basis over their contractual or legal lives (see Note 9) or their estimated useful lives where such lives are not determined by law or contract.

Bunge reviews its property, plant and equipment and finite-lived intangible assets for impairment whenever events or changes in circumstances indicate that carrying amounts may not be recoverable. Bunge bases its evaluation of recoverability on such indicators as the nature, future economic benefits and geographic locations of the assets, historical or future profitability measures and other external market conditions. If these indicators result in the expected non-recoverability of the carrying amount of an asset or asset group, Bunge evaluates potential impairment using undiscounted estimated future cash flows. If such undiscounted future cash flows during the asset's expected useful life are below its carrying value, a loss is recognized for the shortfall, measured by the present value of the estimated future cash flows or by third-party appraisal. Bunge records impairments related to property, plant and equipment and finite-lived intangible assets used in the processing of its products in cost of goods sold in its consolidated statements of income. Any impairment of marketing or brand assets is recognized in selling, general and administrative expenses in the consolidated statements of income (see Note 10).

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF BUSINESS, BASIS OF PRESENTATION, AND SIGNIFICANT ACCOUNTING POLICIES (Continued)

Property, plant and equipment and other finite-lived intangible assets to be sold or otherwise disposed of are reported at the lower of carrying amount or fair value less cost to sell.

Impairment of Investments in Affiliates – Bunge reviews its investments annually or when an event or circumstances indicate that a potential decline in value may be other than temporary. Bunge considers various factors in determining whether to recognize an impairment charge, including the length of time that the fair value of the investment is expected to be below its carrying value, the financial condition, operating performance and near-term prospects of the affiliate and Bunge's intent and ability to hold the investment for a period of time sufficient to allow for recovery of the fair value. Impairment charges for investments in affiliates are included as a charge within other income (expense) – net.

Stock-Based Compensation – Bunge maintains equity incentive plans for its employees and non-employee directors (see Note 26). Bunge accounts for stock-based compensation using the modified prospective transition method. Under the modified prospective transition method, compensation cost recognized for the years ended December 31, 2012, 2011 and 2010 includes compensation cost for all share-based awards granted subsequent to January 1, 2006, based on the grant date fair value.

Income Taxes – Income tax expenses and benefits are recognized based on the tax laws and regulations in the jurisdictions in which Bunge's subsidiaries operate. Under Bermuda law, Bunge is not required to pay taxes in Bermuda on either income or capital gains. The provision for income taxes includes income taxes currently payable and deferred income taxes arising as a result of temporary differences between the carrying amounts of existing assets and liabilities in Bunge's financial statements and their respective tax bases. Deferred tax assets are reduced by valuation allowances if it is determined that it is more likely than not that the deferred tax asset will not be realized. Accrued interest and penalties related to unrecognized tax benefits are recognized in income tax expenses in the consolidated statements of income.

The calculation of tax liabilities involves management's judgments concerning uncertainties in the application of complex tax regulations in the many jurisdictions in which Bunge operates and involves consideration of liabilities for potential tax audit issues in those many jurisdictions based on estimates of whether it is more likely than not those additional taxes will be due. Investment tax credits are recorded in income tax expense in the period in which such credits are granted.

Revenue Recognition – Sales of agricultural commodities, fertilizers and other products are recognized when persuasive evidence of an arrangement exists, the price is determinable, the product has been delivered, title to the product and risk of loss transfer to the customer, which is dependent on the agreed upon sales terms with the customer and when collection of the sale price is reasonably assured. Sales terms provide for passage of title either at the time and point of shipment or at the time and point of delivery of the product being sold. Net sales consist of gross sales less discounts related to promotional programs and sales taxes. Interest income on secured advances to suppliers is included in net sales due to its operational nature (see Note 6). Shipping and handling charges billed to customers are included in net sales and related costs are included in cost of goods sold.

Research and Development – Research and development costs are expensed as incurred. Research and development expenses were \$19 million, \$21 million and \$22 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Adoption of New Accounting Pronouncements – In May 2011, the Financial Accounting Standards Board (FASB) amended the guidance in ASC Topic 820, *Fair Value Measurement*. This guidance is intended to result in convergence between GAAP and IFRS requirements for measurement of, and disclosures about, fair value. The amendment clarifies or changes certain fair value measurement principles and enhances the disclosure requirements particularly for Level 3 fair value measurements. The adoption of this standard on January 1, 2012 did not have a material impact on Bunge's consolidated financial statements.

New Accounting Pronouncements – In December 2011, FASB amended the guidance in ASC Topic 210, *Balance Sheet*. This amendment requires an entity to disclose both gross and net information about financial instruments that are eligible for offset in the statement of financial position and/or subject to a master netting arrangement or similar agreement. The amendment is effective for annual and interim periods beginning on January 1, 2013 on a retrospective basis for all comparative periods presented. The adoption of this standard may expand Bunge's disclosures but is not expected to impact Bunge's consolidated financial results.

2. BUSINESS ACQUISITIONS

In November 2012, Bunge acquired a margarine plant in Poland in its edible oils products segment for \$7 million in cash. The purchase price allocation has been completed resulting in \$6 million of property, plant and equipment and \$1 million of finite-lived intangible assets.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

2. BUSINESS ACQUISITIONS (Continued)

In July 2012, Bunge acquired a 55% interest in a newly formed oilseed processing joint venture in its agribusiness segment in eastern Europe for \$54 million comprised of \$17 million in cash and \$37 million in redeemable noncontrolling interest. Bunge consolidates the joint venture in its consolidated financial statements. In conjunction with the formation of the venture, Bunge entered into an agreement to acquire the remaining 45% interest at either Bunge's or the noncontrolling interest holder's option in the future. The exercise date and price of the option are reasonably determinable. As a result, Bunge has classified the noncontrolling interest as redeemable noncontrolling interest in its consolidated balance sheet as of December 31, 2012 (see Note 23). The preliminary purchase price allocation includes \$3 million to inventory, \$23 million to other current assets, \$131 million to property, plant and equipment, \$14 million to other current liabilities and \$89 million to long-term debt.

In June 2012, Bunge acquired sugarcane milling assets in Brazil in its sugar and bioenergy segment for \$61 million in cash. The purchase price allocation has been completed resulting in \$10 million of biological assets, \$43 million of property, plant and equipment, \$1 million of finite-lived intangible assets and \$7 million of goodwill.

In May 2012, Bunge acquired an additional 63.5% interest in a wheat mill and bakery dry mix operation in North America in its milling products segment for \$102 million in cash, net of cash acquired, and \$8 million in redeemable noncontrolling interest. Prior to this transaction, Bunge had a 31.5% interest in the entity which was accounted for under the equity method. Upon completion of the transaction, Bunge has a 95% interest in the entity, which it consolidates. Upon assuming control of the entity, Bunge recorded a non-cash, non-taxable gain of \$36 million to adjust its previously existing noncontrolling interest to fair value of \$52 million. The purchase price allocation has been completed resulting in \$21 million of inventories, \$35 million of other current assets, \$71 million of property, plant and equipment, \$32 million of finite-lived intangible assets, \$18 million of other liabilities, \$24 million of deferred tax liabilities and \$45 million of goodwill (see Note 23).

In March 2012, Bunge acquired an asset management business in Europe in its agribusiness segment for \$9 million, net of cash acquired. The purchase price allocation has been completed resulting in \$52 million of other assets, \$344 million of long-term investments, \$23 million of other finite-lived intangible assets, \$54 million of other liabilities, \$316 million of long-term debt and \$40 million allocated to noncontrolling interest. Of these amounts, \$14 million of other net assets, \$344 million of long-term investments, \$316 million of long-term debt and \$40 million of noncontrolling interest are attributed to certain managed investment funds, which Bunge

consolidates as it is deemed to be the primary beneficiary. The assets of the consolidated funds can only be used to settle the liabilities of such funds. Consolidated liabilities at December 31, 2012 include total liabilities of \$354 million for which the consolidated funds creditors do not have recourse to Bunge (see Notes 1, 12 and 17).

In February 2012, Bunge acquired an edible oils and fats business in India in its edible oil products segment for \$94 million, net of cash acquired. The purchase price consisted of \$77 million cash and \$17 million acquired debt. The purchase price allocation has been completed resulting in \$15 million of inventories, \$4 million of current assets, \$27 million of property, plant and equipment, \$53 million of finite-lived intangible assets (primarily trademark and brands) and \$5 million of other liabilities.

Also in 2012, Bunge acquired finite-lived intangible assets and property, plant and equipment in three separate transactions in North America and Africa in its agribusiness segment for a total of \$24 million cash.

In December 2011, Bunge acquired a tomato products business in its edible oils segment in Brazil for \$97 million consisting of \$81 million cash and a \$16 million contingent obligation. The preliminary purchase price allocation included allocations of \$10 million of inventory, \$39 million of finite-lived intangible assets, primarily trademarks, \$21 million of property, plant and equipment, \$41 million of goodwill, \$1 million of current liabilities and \$13 million of deferred tax liabilities. Upon finalization of the purchase price allocation in 2012 finite-lived intangibles were increased by \$14 million, inventories were reduced by \$6 million, deferred tax liabilities were reduced by \$5 million and goodwill was reduced by \$13 million.

In August 2011, Bunge acquired a North American margarine business in its edible oils segment for a total purchase price of \$18 million cash. The purchase price allocation was completed in 2011 resulting in \$14 million allocated to property, plant and equipment and \$4 million allocated to inventory. Also, in August 2011, Bunge acquired grain elevator operations in its agribusiness segment in North America for a total purchase price of \$10 million. The purchase price allocation was completed in 2011 resulting in \$7 million allocated to property, plant and equipment and \$3 million to the fair value of commercial purchase and sale contracts acquired.

In February 2011, Bunge acquired a port facility in its agribusiness segment in Ukraine for a total purchase price of \$100 million, net of \$2 million cash acquired, consisting of \$83 million cash and \$17 million assumed short-term debt related to assets under construction. The purchase price allocation was completed in 2011 resulting in \$5 million of current assets, \$48 million of property, plant and equipment, \$32 million of other finite-lived intangible assets, \$34 million of

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

2. BUSINESS ACQUISITIONS (Continued)

goodwill, \$10 million of capital lease obligations, \$6 million of deferred tax liabilities and \$3 million of other liabilities.

3. DISCONTINUED OPERATIONS AND BUSINESS DIVESTITURES

On December 6, 2012, Bunge entered into a definitive agreement with Yara International ASA (Yara) under which Yara will acquire Bunge's Brazilian fertilizer distribution business, including blending facilities, brands and warehouses, for \$750 million in cash. As a result of the transaction, which Bunge expects to complete in 2013, Bunge does not expect to have significant ongoing cash flows related to the Brazilian fertilizer business or any significant ongoing participation in the operations of this business. Assets and liabilities subject to the purchase and sale agreement have been classified as held for sale in Bunge's consolidated balance sheet as of December 31, 2012. Additionally, in December 2012 Bunge announced the sale of its interest in its fertilizer distribution venture to its partner GROWMARK, Inc. and would cease its North American fertilizer distribution operations in 2013. The operating results of the Brazilian and North American fertilizer distribution businesses are reported within income from discontinued operations, net of tax, in the consolidated statements of income and have been excluded from segment results for all periods presented (see Note 28).

The following table summarizes the results from discontinued operations.

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Net sales	\$ 2,503	\$ 2,646	\$ 1,754
Cost of goods sold	(2,498)	(2,545)	(1,556)
Gross profit	5	101	198
Selling, general and administrative expenses	(143)	(117)	(103)
Interest income	25	6	2
Interest expense	(23)	(7)	(4)
Foreign exchange gain (loss)	21	(3)	(42)
Other income (expenses) - net	(30)	(16)	(23)
Income (loss) from discontinued operations before income tax	(145)	(36)	28
Income tax (expense) benefit	(197)	11	10
Income (loss) from discontinued operations, net of tax	\$ (342)	\$ (25)	\$ 38

Assets held for sale associated with discontinued operations as of December 31, 2012 are as follows:

(US\$ in millions)	DECEMBER 31, 2012
Assets:	
Cash and cash equivalents	\$ 2
Trade accounts receivable (less allowance of \$2)	189
Inventories	402
Other current assets	67
Current assets held for sale	\$660
Property, plant and equipment, net	\$218
Deferred income taxes	40
Other non-current assets	(8)
Non-current assets held for sale	\$250
Liabilities:	
Trade accounts payable	\$157
Other current liabilities	140
Current liabilities held for sale	\$297
Other non-current liabilities	\$ 13
Non-current liabilities held for sale	\$ 13

In January 2010, Bunge and two of its wholly-owned subsidiaries entered into a definitive agreement (as amended, the Agreement) with Vale S.A., a Brazil-based global mining company (Vale), and an affiliate of Vale, pursuant to which Vale acquired Bunge's fertilizer nutrients assets in Brazil, including its interest in Fertilizantes Fosfatados S.A. (Fosfertil) when the transaction closed on May 27, 2010. Final settlement of a post-closing adjustment occurred on August 13, 2010. Bunge received total cash proceeds of \$3,914 million and recognized a gain of \$2,440 million (\$1,901 million, net of tax) in its fertilizer segment related to this transaction. Included in the calculation of the gain was \$152 million of transaction costs incurred in connection with the divestiture. Total income tax expense associated with the transaction was \$539 million, of which approximately \$280 million was paid during the year ended December 31, 2010 and approximately \$259 million was offset by deferred tax assets and other tax credits and, therefore, did not result in cash tax payments. The sale of these assets did not result in accounting for Bunge's Brazil fertilizer nutrients assets as discontinued operations as Bunge retained the merchandising and distribution business, which continued with a similar level of cash flows as it entered into contractual arrangements to procure raw materials from Vale and has remained a major seller of blended fertilizer products to farmers in Brazil.

Approximately \$144 million of transaction costs and \$280 million of withholding taxes are included as a component of cash used for operating activities in Bunge's consolidated statement of cash flows for the year ended December 31, 2010. Gross proceeds of \$3,914 million and cash disposed of \$106 million related to the sale of the Brazilian fertilizer

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

3. DISCONTINUED OPERATIONS AND BUSINESS DIVESTITURES (Continued)

nutrients assets are included as a component of cash provided by investing activities in Bunge's consolidated statement of cash flows for the year ended December 31, 2010.

4. TRADE STRUCTURED FINANCE PROGRAM

Bunge engages in various trade structured finance activities to leverage the value of its trade flows across its operating regions. As described in Note 1, these activities include a Program under which a Bunge entity generally obtains U.S. dollar-denominated LCs (each based on an underlying commodity trade flow) from financial institutions, foreign exchange forward contracts, and time deposits denominated in the local currency of the financial institution counterparties, all of which are subject to legally enforceable set-off agreements. The LC and foreign exchange contracts are presented within the line item letter of credit obligations under trade structured finance program on the consolidated balance sheets as of December 31, 2012 and 2011. The net return from activities under this Program, including fair value changes, is included as a reduction of cost of goods sold in the accompanying consolidated statements of income.

At December 31, 2012 and 2011, the recorded amounts of the time deposits (with weighted-average interest rates of 8.95% and 9.38%, respectively) and LCs (including foreign exchange contracts) approximated \$3,048 million and \$1,946 million, respectively. In addition, at December 31, 2012 and 2011, the fair values of the time deposits (Level 2 measurements) were approximately \$3,048 million and \$1,946 million and the fair values of the LCs (Level 2 measurements) were approximately \$3,024 million and \$2,175 million. The fair values approximated the carrying amount of these financial instruments due to their short-term nature. The fair values of the foreign exchange forward contracts (Level 2 measurements) were \$24 million and \$(229) million, respectively.

During the years ended December 31, 2012, 2011 and 2010, this Program resulted in total proceeds as a result of issuances of LCs of approximately \$5,210 million, \$3,617 million and \$2,436 million. These cash inflows are offset by the related cash outflows resulting from placement of the time deposits and repayment of the LCs.

5. INVENTORIES

Inventories by segment are presented below. Readily marketable inventories refers to inventories that are readily

convertible to cash because of their commodity characteristics, widely available markets and international pricing mechanisms.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Agribusiness ⁽¹⁾	\$5,240	\$4,080
Sugar and Bioenergy ⁽²⁾	488	465
Edible Oil Products ⁽³⁾	617	489
Milling Products ⁽⁴⁾	184	130
Fertilizer ⁽⁴⁾⁽⁵⁾	61	569
Total	\$6,590	\$5,733

(1) Includes readily marketable agricultural commodity inventories carried at fair value of \$4,892 million and \$3,724 million at December 31, 2012 and 2011, respectively. All other agribusiness segment inventories are carried at lower of cost or market.

(2) Includes readily marketable sugar inventories of \$199 million and \$139 million at December 31, 2012 and 2011, respectively. Of these sugar inventories, \$144 million and \$83 million are carried at fair value at December 31, 2012 and 2011, respectively, in Bunge's trading and merchandising business. Sugar and ethanol inventories in Bunge's industrial production business are carried at lower of cost or market.

(3) Edible oil products inventories are generally carried at lower of cost or market, with the exception of readily marketable inventories of bulk soybean oil which are carried at fair value in the aggregate amount of \$215 million and \$212 million at December 31, 2012 and 2011, respectively.

(4) Milling products and fertilizer inventories are carried at lower of cost or market.

(5) 2012 Fertilizer inventories exclude amounts classified as held for sale (see Note 3).

6. OTHER CURRENT ASSETS

Other current assets consist of the following:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Prepaid commodity purchase contracts ⁽¹⁾	\$ 299	\$ 206
Secured advances to suppliers, net ⁽²⁾	390	349
Unrealized gains on derivative contracts at fair value	1,230	1,283
Recoverable taxes, net	465	528
Margin deposits ⁽³⁾	363	352
Marketable securities	105	50
Deferred purchase price receivable ⁽⁴⁾	134	192
Prepaid expenses	314	369
Restricted cash ⁽⁵⁾	1	43
Other	517	424
Total	\$3,818	\$3,796

(1) Prepaid commodity purchase contracts represent advance payments against fixed price contracts for future delivery of specified quantities of agricultural commodities. These contracts are recorded at fair value based on prices of the underlying agricultural commodities.

(2) Bunge provides cash advances to suppliers, primarily Brazilian farmers of soybeans, to finance a portion of the suppliers' production costs. Bunge does not bear any of the costs or risks associated with the related growing crops. The advances are largely collateralized by future crops and physical assets of the suppliers, carry a local market interest rate and settle when the farmer's crop is harvested and sold. The secured advances to farmers are reported net of allowances of \$12 million and \$3 million at December 31, 2012 and 2011, respectively. Changes in the allowance for 2012 included an increase of \$17 million for additional bad debt provisions and a reduction in the

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

6. OTHER CURRENT ASSETS (Continued)

allowance for recoveries and write-offs of \$7 million and \$1 million, respectively. Changes in the allowance for 2011 included an increase of \$2 million for additional bad debt provisions and a reduction in the allowance for recoveries of \$2 million.

Interest earned on secured advances to suppliers of \$27 million, \$25 million and \$25 million for the years ended December 31, 2012, 2011, and 2010, respectively, is included in net sales in the consolidated statements of income.

(3) Margin deposits include U.S. treasury securities at fair value and cash.

(4) Deferred purchase price receivable represents additional credit support for the investment conduits in Bunge's accounts receivables sales program (see Note 18) and is recognized at its estimated fair value.

(5) Restricted cash at December 31, 2011, includes an escrowed cash deposit related to an equity investment, which was completed in the first quarter of 2012.

7. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment consist of the following:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Land	\$ 353	\$ 468
Biological assets	480	383
Buildings	1,886	1,794
Machinery and equipment	4,938	4,461
Furniture, fixtures and other	471	376
	<u>8,128</u>	<u>7,482</u>
Less: accumulated depreciation and depletion	(3,395)	(3,163)
Plus: construction in progress	1,155	1,198
Total	<u>\$ 5,888</u>	<u>\$ 5,517</u>

Bunge capitalized expenditures of \$1,139 million, \$1,061 million and \$1,117 million during the years ended 2012, 2011 and 2010, respectively. Included in these capitalized expenditures was capitalized interest on construction in progress of \$13 million, \$16 million and \$21 million for the years ended 2012, 2011 and 2010, respectively. In addition, Bunge capitalized \$37 million related to non-cash acquisitions of property, plant and equipment. Depreciation and depletion expense was \$504 million, \$465 million and \$395 million for the years ended 2012, 2011 and 2010, respectively.

8. GOODWILL

Bunge performs its annual goodwill impairment test in the fourth quarter of each year. Step 1 of the goodwill impairment

test compares the fair value of Bunge's reporting units to which goodwill has been allocated to the carrying values of those reporting units. The fair value of the agribusiness and sugar and bioenergy segment reporting units is determined using a combination of two methods: estimates based on market earnings multiples of peer companies identified for the reporting unit (the market approach) and a discounted cash flow model with estimates of future cash flows based on internal forecasts of revenues and expenses (the income approach). The market multiples are generally derived from public information related to comparable companies with operating and investment characteristics similar to those of the agribusiness and sugar and bioenergy reporting units and from market transactions in the industry. The income approach estimates fair value by discounting a reporting unit's estimated future cash flows using a weighted-average cost of capital that reflects current market conditions and the risk profile of the respective business unit and includes, among other things, assumptions about variables such as commodity prices, crop and related throughput and production volumes, profitability, future capital expenditures and discount rates, all of which are subject to a high degree of judgment. For the agribusiness segment, the result of the Step 1 analysis for 2012 indicated no potential impairment of the goodwill asset in that segment. For the sugar and bioenergy reporting unit, a very low level of market transactions in the industry during 2012 and consecutive years of weak sugarcane harvests that resulted from adverse weather conditions in 2012 and 2011 combined with low ethanol prices in Brazil, resulted in the estimated fair value of the reporting unit being below book value. Step 2 of the analysis was performed to measure the potential impairment. This analysis resulted in a pre-tax impairment charge of \$514 million (\$339 million, net of tax).

For all other reporting units, the estimated fair value of the reporting unit is determined utilizing a discounted cash flow analysis. The fair values of these reporting units were determined to be sufficiently in excess of their respective carrying values with no indication of potential impairments.

There were no impairment charges resulting from Bunge's annual impairment testing for the year ended December 31, 2011. For the year ended December 31, 2010, an impairment charge of \$3 million was recorded in the milling products segment.

Changes in the carrying value of goodwill by segment for the years ended December 31, 2012 and 2011 are as follows:

(1) See Note 2.

(2) Beginning in the first quarter of 2012, the management responsibilities for certain Brazilian port facilities were moved from the agribusiness segment to the fertilizer segment. Accordingly, \$1 million of goodwill attributable to these port facilities was reclassified to conform to the 2012 segment presentation.

(3) Bunge's Brazilian subsidiary's tax deductible goodwill is in excess of its book goodwill. For financial reporting purposes for goodwill acquired prior to 2009, the tax benefits attributable to the excess tax goodwill are first used to reduce associated goodwill and then other intangible assets to zero, prior to recognizing any income tax benefit in the consolidated statements of income.

(4) See Note 10.

9. OTHER INTANGIBLE ASSETS

Other intangible assets consist of the following:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Trademarks/brands, finite-lived	\$ 214	\$ 162
Licenses	11	13
Other	212	154
	<u>437</u>	<u>329</u>
Less accumulated amortization:		
Trademarks/brands ⁽¹⁾	(59)	(53)
Licenses	(4)	(4)
Other	(79)	(58)
	<u>(142)</u>	<u>(115)</u>
Trademarks/brands, indefinite-lived	-	6
Intangible assets, net of accumulated amortization	\$ 295	\$ 220

(1) Bunge's Brazilian subsidiary's tax deductible goodwill in the agribusiness segment is in excess of its book goodwill. For financial reporting purposes, for other intangible assets acquired prior to 2009, before recognizing any income tax benefit of tax deductible goodwill in excess of its book goodwill in the consolidated statements of income and after the related book goodwill has been reduced to zero, any such remaining tax deductible goodwill in excess of its book goodwill is used to reduce other intangible assets to zero.

In 2012, Bunge acquired \$59 million of trademarks and \$71 million of other intangible assets including \$15 million of customer lists, \$22 million of patents for developed technology and \$23 million of favorable contractual arrangements. These amounts were allocated \$45 million to the agribusiness segment, \$1 million to the sugar and bioenergy segment, \$52 million to the edible oils segment and \$32 million to the milling products segment. Finite lives of these assets range from 5 to 20 years.

In 2011, Bunge acquired \$23 million of trademarks and \$48 million of other intangible assets including customer lists of \$16 million and port usage rights of \$32 million. These amounts were allocated \$32 million to the agribusiness

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

9. OTHER INTANGIBLE ASSETS (Continued)

segment and \$39 million to the edible oil products segment. Finite lives of these assets range from 5 to 20 years.

Bunge performed its annual impairment tests of the indefinite-lived intangible assets in the fourth quarters for the years ended December 31, 2012, 2011 and 2010. During 2012, Bunge reviewed its \$6 million of indefinite-lived intangible assets and determined that market conditions indicate that these trademark and brand intangibles should be classified as finite-lived. These amounts have been reclassified and assigned a remaining life of 10 years. There were no impairments of indefinite-lived intangible assets recorded for the years ended December 31, 2012, 2011 and 2010.

Aggregate amortization expense was \$34 million, \$29 million and \$23 million for the years ended December 31, 2012, 2011 and 2010, respectively. The estimated future aggregate amortization expense is \$39 million for 2013 and approximately \$37 million annually for 2014 through 2017.

10. IMPAIRMENT AND RESTRUCTURING CHARGES

Impairment – In the fourth quarter of 2012, Bunge recorded pre-tax, non-cash impairment charges of \$1 million and \$9 million in selling, general and administrative expenses and other income (expense) – net, respectively, in its consolidated statements of income. These charges relate to a loan to a European biodiesel joint venture and two separate equity method investments in European biodiesel producers, all in the agribusiness segment. The fair values of the biodiesel investments were determined utilizing discounted future expected cash flows for these biodiesel operations.

In the third quarter of 2012, Bunge recorded pre-tax, non-cash impairment charges of \$29 million and \$10 million in selling, general and administrative expenses and other income (expense) – net, respectively, in its consolidated statements of income. These charges related to an affiliate loan and the write-down of an equity investment in a North American corn ethanol joint venture in Bunge's sugar and bioenergy segment. Declining results of operations at the venture's only facility led to suspension of operations in the venture.

Bunge recorded no significant impairment charges during the year ended December 31, 2011.

During the year ended December 31, 2010, Bunge recorded pre-tax, non-cash impairment charges of \$77 million in cost of goods sold, which consisted of \$42 million related to the write-down of a European oilseed processing and refining facility, \$12 million related to the closure of an older, less efficient oilseed processing facility in the United States and a co-located corn oil extraction line, \$9 million related to the

closure of processing and refining facilities in Europe with restructuring of Bunge's European footprint, \$9 million related to a long-term supply contract acquired in connection with a wheat mill acquisition in Brazil and \$5 million for additional assets in Brazil. These pre-tax impairment charges were allocated \$35 million to the agribusiness segment, \$28 million to the edible oil products segment and \$14 million to the milling products segment. The fair values of the production and distribution facilities were determined utilizing projected discounted future cash flows. The fair values of the office facility and the long-term supply contract were determined using third-party valuations.

Restructuring – For the years ended December 31, 2012 and 2011, Bunge did not record any significant restructuring charges.

During the year ended December 31, 2010, Bunge recorded pre-tax restructuring charges of \$19 million in cost of goods sold, which related primarily to the oilseed processing facility closure in the United States, the consolidation of administrative functions in Brazil and restructuring of certain European operations. These restructuring charges were allocated \$10 million to the agribusiness segment, \$1 million to the sugar and bioenergy segment, \$4 million to the edible oil products segment and \$4 million to the fertilizer segment. In addition, restructuring charges consisting primarily of termination benefits related to the consolidation of Bunge's Brazilian operations and the closure of certain European oilseed processing and refining facilities were recorded as selling, general and administrative expenses with \$3 million, \$3 million, \$3 million and \$1 million allocated to the agribusiness, sugar and bioenergy, edible oil products and milling products segments, respectively.

Termination benefit costs in the agribusiness segment for the year ended December 31, 2010 related to benefit obligations associated with approximately 90 employees related to the closure of the U.S. oilseed processing facility and the consolidation of its operations in Brazil. This consolidation of Brazilian operations also impacted the sugar and bioenergy, fertilizer, edible oil products and milling products segments. Termination benefit costs in Bunge's edible oil products segment related to 411 employees in connection with the reorganization of certain of its operations in Europe. Bunge accrued \$11 million in its consolidated balance sheet related to the Brazilian restructuring as of December 31, 2010. Substantially all of these costs were paid in 2011 under severance plans that were defined and communicated in 2010.

Nonrecurring fair value measurements – The following table summarizes assets measured at fair value on a nonrecurring basis subsequent to initial recognition as of December 31, 2012 and 2010. There were no nonrecurring fair value measurements

11. INVESTMENTS IN AFFILIATES

Bunge participates in various unconsolidated joint ventures and other investments accounted for using the equity method. Significant equity method investments at December 31, 2012 are described below. Bunge allocates equity in earnings of affiliates to its reporting segments.

Agribusiness

PT Bumiraya Investindo – Bunge has a 35% ownership interest in PT Bumiraya Investindo, an Indonesian palm plantation company.

Bunge-SCF Grain, LLC – Bunge has a 50% interest in Bunge-SCF Grain, LLC a joint venture with SCF Agri/Fuels LLC that operates grain facilities along the Mississippi river.

Caiaa – Paraguay Complejo Agroindustrial Angostura S.A. – Bunge has a 33.33% ownership interest in a joint venture with Louis Dreyfus Commodities and Aceitera General Deheza S.A. (AGD), which is constructing an oilseed processing facility in Paraguay.

Diester Industries International S.A.S. (DII) – Bunge is a party to a joint venture with Diester Industries, a subsidiary of Sofiproteol, specializing in the production and marketing of biodiesel in Europe. Bunge has a 40% interest in DII.

The Solae Company (Solae) – In 2012, Bunge sold its 28.06% interest in Solae, a joint venture engaged in the production and distribution of soy-based ingredients, to its partner, E.I. du Pont de Nemours and Company for \$448 million in cash exclusive of a special cash dividend of \$35 million. Bunge recognized a pre-tax gain of \$85 million (\$54 million after-tax) related to the sale.

Terminal 6 S.A. and Terminal 6 Industrial S.A. – Bunge has a joint venture in Argentina with AGD for the operation of the Terminal 6 port facility located in the Santa Fe province of Argentina. Bunge is also a party to a second joint venture with AGD that operates a crushing facility located adjacent to the Terminal 6 port facility. Bunge owns 40% and 50%, respectively, of these joint ventures.

Sugar and Bioenergy

Bunge-Ergon Vicksburg, LLC (BEV) – Bunge is a 50% owner of BEV along with Ergon Ethanol, Inc. BEV operates an ethanol plant at the Port of Vicksburg, Mississippi, where Bunge operates grain elevator facilities. Bunge recorded a \$10 million impairment charge related to its investment in BEV reducing the investment value to zero (see Note 10).

ProMaiz – Bunge has a joint venture in Argentina with AGD for the construction and operation of a corn wet milling facility. Bunge is a 50% owner in this joint venture.

Southwest Iowa Renewable Energy, LLC (SIRE) – Bunge is a 25% owner of SIRE. The other owners are primarily agricultural producers located in Southwest Iowa. SIRE operates an ethanol plant near Bunge's oilseed processing facility in Council Bluffs, Iowa.

Fertilizers

Bunge Maroc Phosphore S.A. – Bunge has a 50% interest in this joint venture to produce fertilizers in Morocco with Office Chérifien des Phosphates (OCP). The joint venture was formed to produce fertilizer products for shipment to Brazil, Argentina and certain other markets in Latin America.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

12. OTHER NON-CURRENT ASSETS

Other non-current assets consist of the following:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Recoverable taxes, net	\$ 309	\$ 386
Long-term receivables from farmers in Brazil, net	164	284
Judicial deposits	169	167
Other long-term receivables	60	10
Income taxes receivable	431	565
Long-term investments	414	37
Affiliate loan receivable, net	59	69
Other	140	188
Total	<u>\$1,746</u>	<u>\$1,706</u>

Recoverable taxes – Recoverable taxes are reported net of valuation allowances of \$47 million and \$41 million at December 31, 2012 and 2011, respectively.

Long-term receivables from farmers in Brazil – Bunge provides financing to farmers in Brazil, primarily through secured advances against farmer commitments to deliver agricultural commodities (primarily soybeans) upon harvest of the then-current year's crop and through credit sales of fertilizer to farmers. These are commercial transactions that are intended to be short-term in nature with amounts expected to be repaid either in cash or through delivery to Bunge of agricultural commodities when the related crops are harvested. These arrangements are typically secured by the farmer's expected current year crop and liens on land, buildings and equipment to ensure recoverability in the event of crop failure. The terms of fertilizer credit sales do not include interest. The secured advances against commitments to deliver soybeans provide for interest between the advance date and the scheduled soybean delivery date. The credit factors considered by Bunge in evaluating farmers before initial advance or extension of credit include, among other things, the credit history of the farmer, financial strength, available agricultural land and available collateral in addition to the expected crop.

From time to time, weather conditions in certain regions of Brazil and farming economics in general, are adversely affected by factors including volatility in soybean prices, movements in the Brazilian *real* relative to the U.S. dollar and crop quality and yield issues. In the event of a farmer default resulting from these or other factors, Bunge considers these secured advance and credit sale amounts as past due immediately when the expected soybeans are not delivered as scheduled against advances or when the credit sale amounts are not paid when they come due at the end of the harvest. A large portion of these defaulted accounts resulted from poor crops in certain regions of Brazil in 2005 and 2006. While Brazilian farm economics have improved from those consecutive crop failures, some farmers have continued to face economic challenges due to high debt levels and a strong Brazilian *real*.

Upon farmer default, Bunge generally initiates legal proceedings to recover the defaulted amounts. However, the legal recovery process through the judicial system is a long-term process, generally spanning a number of years. As a result, once accounts have been submitted to the judicial process for recovery, Bunge may also seek to renegotiate certain terms with the defaulting farmer in order to accelerate recovery.

Credit quality and allowance for uncollectible accounts – Bunge adopted the accounting guidance on disclosure about the credit quality of financing receivables and the allowance for credit losses as of December 31, 2010. This guidance requires information to be disclosed at disaggregated levels, defined as portfolio segments and classes. Based upon its analysis of credit losses and risk factors to be considered in determining the allowance for credit losses, Bunge has determined that the long-term receivables from farmers in Brazil represents a single portfolio segment.

Bunge evaluates this single portfolio segment by class of receivables, which is defined as a level of information (below a portfolio segment) in which the receivables have the same initial measurement attribute and a similar method for assessing and monitoring risk. Bunge has identified accounts in legal collection processes and renegotiated amounts as classes of long-term receivables from farmers. Valuation allowances for accounts in legal collection processes are determined by Bunge on individual accounts based on the fair value of the collateral provided as security for the secured advance or credit sale. The fair value is determined using a combination of internal and external resources, including published information concerning Brazilian land values by region. For determination of the valuation allowances for renegotiated amounts, Bunge considers historical experience with the individual farmers, current weather and crop conditions, as well as the fair value of non-crop collateral.

Impairment – For both classes, a long-term receivable from farmers in Brazil is considered impaired, based on current information and events, if Bunge determines it to be probable that all amounts due under the original terms of the receivable will not be collected. Recognition of interest income on secured advances to farmers is suspended once the farmer defaults on the originally scheduled delivery of agricultural commodities as the collection of future income is determined not to be probable. No additional interest income is accrued from the point of default until ultimate recovery, where amounts collected are credited first against the receivable and then to any unrecognized interest income. With the pending sale of the Brazilian fertilizer distribution business, Bunge evaluated the long-term receivables accounts from farmers and the impact of its exit from the fertilizer business on its ability to recover amounts owed by farmers, particularly where such farmers grow commodities such as coffee or cocoa, for example, and to whom Bunge will no longer have a business connection. As a result of this evaluation, Bunge recorded \$49 million of additional allowances for doubtful accounts

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

12. OTHER NON-CURRENT ASSETS (Continued)

related to certain long-term receivables during the fourth quarter of 2012.

The table below summarizes Bunge's recorded investment in long-term receivables from farmers in Brazil for amounts in the legal collection process and renegotiated amounts.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Legal collection process ⁽¹⁾	\$269	\$358
Renegotiated amounts ⁽²⁾	119	125
Total	<u>\$388</u>	<u>\$483</u>

(1) All amounts in legal process are considered past due upon initiation of legal action.
(2) All renegotiated amounts are current on repayment terms.

The average recorded investment in long-term receivables from farmers in Brazil for the years ended December 31, 2012 and 2011 was \$444 million and \$561 million, respectively. The table below summarizes Bunge's recorded investment in long-term receivables from farmers in Brazil and the related allowance amounts.

(US\$ in millions)	DECEMBER 31, 2012		DECEMBER 31, 2011	
	RECORDED INVESTMENT	ALLOWANCE	RECORDED INVESTMENT	ALLOWANCE
For which an allowance has been provided:				
Legal collection process	\$178	\$165	\$162	\$147
Renegotiated amounts	67	59	64	52
For which no allowance has been provided:				
Legal collection process	91	-	196	-
Renegotiated amounts	52	-	61	-
Total	<u>\$388</u>	<u>\$224</u>	<u>\$483</u>	<u>\$199</u>

The table below summarizes the activity in the allowance for doubtful accounts related to long-term receivables from farmers in Brazil.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Beginning balance	\$199	\$201
Bad debt provision	92	32
Recoveries	(19)	(17)
Write-offs	(29)	-
Transfers ⁽¹⁾	(1)	6
Foreign exchange translation	(18)	(23)
Ending balance	<u>\$224</u>	<u>\$199</u>

(1) Represents reclassifications from allowance for doubtful accounts-current for secured advances to suppliers.

Judicial deposits – Judicial deposits are funds that Bunge has placed on deposit with the courts in Brazil. These funds are held in judicial escrow relating to certain legal proceedings pending legal resolution and bear interest at the SELIC rate (the benchmark rate of the Brazilian central bank).

Income taxes receivable – Income taxes receivable at December 31, 2012 includes overpayments of current income taxes plus accrued interest. These income tax prepayments are expected to be utilized for settlement of future income tax obligations. Income taxes receivable in Brazil bear interest at the SELIC rate (the benchmark rate of the Brazilian central bank).

Long-term investments – Long-term investments represent investments held by certain managed investment funds (see Note 2) which are included in Bunge's consolidated financial statements. The consolidated funds are, for GAAP purposes, investment companies and therefore are not required to consolidate their majority owned and controlled investments. Bunge reflects these investments at fair value.

Affiliate loans receivable – Affiliate loans receivable are primarily interest bearing receivables from unconsolidated affiliates with an initial maturity of greater than one year.

13. OTHER CURRENT LIABILITIES

Other current liabilities consist of the following:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Accrued liabilities	\$1,069	\$1,179
Unrealized losses on derivative contracts at fair value	1,185	1,370
Advances on sales	223	283
Other	17	57
Total	<u>\$2,494</u>	<u>\$2,889</u>

14. INCOME TAXES

Bunge operates globally and is subject to the tax laws and regulations of numerous tax jurisdictions and authorities, as well as tax agreements and treaties among these jurisdictions. Bunge's tax provision is impacted by, among other factors, changes in tax laws, regulations, agreements and treaties, currency exchange rates and Bunge's profitability in each taxing jurisdiction.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

14. INCOME TAXES (Continued)

Bunge records valuation allowances when it is more likely than not that some portion or all of its deferred tax assets might not be realized. The ultimate realization of deferred tax assets depends primarily on Bunge's ability to generate sufficient timely future income of the appropriate character in the appropriate taxing jurisdiction.

Bunge has elected to use the U.S. federal income tax rate to reconcile the actual provision for income taxes.

The components of income from operations before income tax are as follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
United States	\$215	\$ 77	\$ (147)
Non-United States	157	943	3,196
Total	<u>\$372</u>	<u>\$1,020</u>	<u>\$3,049</u>

The components of the income tax (expense) benefit are:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Current:			
United States	\$ (91)	\$ (7)	\$ 35
Non-United States	(117)	(224)	(493)
	<u>(208)</u>	<u>(231)</u>	<u>(458)</u>
Deferred:			
United States	22	(29)	(12)
Non-United States	199	224	(232)
	<u>221</u>	<u>195</u>	<u>(244)</u>
Non-current:			
United States	4	(5)	(1)
Non-United States	(11)	(14)	4
	<u>(7)</u>	<u>(19)</u>	<u>3</u>
Total	<u>\$ 6</u>	<u>\$ (55)</u>	<u>\$(699)</u>

Reconciliation of the income tax benefit (expense) if computed at the U.S. Federal income tax rate to Bunge's reported income tax benefit (expense) is as follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Income from operations before income tax	\$ 372	\$1,020	\$ 3,049
Income tax rate	35%	35%	35%
Income tax expense at the U.S. Federal tax rate	(130)	(357)	(1,067)
Adjustments to derive effective tax rate:			
Foreign earnings taxed at different statutory rates	47	234	495
Changes in valuation allowances	(1)	7	(129)
Goodwill amortization	29	43	44
Fiscal incentives ⁽¹⁾	51	46	27
Foreign exchange on monetary items	(12)	1	(9)
Deferred tax effect of tax rate change	23	(4)	-
Non-deductible expenses	(6)	(3)	(68)
Uncertain tax positions	4	(18)	3
Other	1	(4)	5
Income tax benefit (expense)	<u>\$ 6</u>	<u>\$ (55)</u>	<u>\$ (699)</u>

(1) Fiscal incentives predominantly relate to investment incentives in Brazil that are exempt from Brazilian income tax.

The primary components of the deferred tax assets and liabilities and the related valuation allowances are as follows:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Deferred income tax assets:		
Net operating loss carryforwards	\$ 959	\$1,020
Excess of tax basis over financial statement basis of property, plant and equipment and other long-lived assets	49	69
Accrued retirement costs (pension and postretirement healthcare cost) and other accrued employee compensation	90	61
Tax credit carryforwards	7	8
Inventories	17	4
Intangibles	258	-
Other accruals and reserves not currently deductible for tax purposes	396	541
Total deferred income tax assets	<u>1,776</u>	<u>1,703</u>
Less valuation allowances	<u>(455)</u>	<u>(187)</u>
Deferred tax income assets, net of valuation allowance	<u>1,321</u>	<u>1,516</u>
Deferred income tax liabilities:		
Excess of tax basis over financial statement basis of property, plant and equipment and other long-lived assets	84	137
Undistributed earnings of affiliates not considered permanently reinvested	26	20
Inventories	60	68
Other temporary differences	-	61
Total deferred income tax liabilities	<u>170</u>	<u>286</u>
Net deferred income tax assets	<u>\$1,151</u>	<u>\$1,230</u>

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

14. INCOME TAXES (Continued)

Deferred income tax assets and liabilities are measured using the enacted tax rates expected to apply to the years in which those temporary differences are expected to be recovered or settled.

With respect to our unremitted earnings that are not considered to be indefinitely reinvested, we have provided a deferred tax liability totaling \$26 million and \$20 million as of December 31, 2012 and 2011, respectively. As of December 31, 2012, we have determined the company has unremitted earnings that are considered to be indefinitely reinvested of approximately \$1,070 million and, accordingly, no provision for income taxes has been made. If these earnings were distributed in the form of dividends or otherwise, Bunge would be subject to income taxes either in the form of withholding taxes or income taxes to the recipient; however, it is not practicable to estimate the amount of taxes that would be payable upon remittance of these earnings.

At December 31, 2012, Bunge's pre-tax loss carryforwards totaled \$4,194 million, of which \$3,090 million have no expiration, including loss carryforwards of \$2,418 million in Brazil. While loss carryforwards in Brazil can be carried forward indefinitely, annual utilization is limited to 30% of taxable income calculated on an entity by entity basis as Brazil tax law does not provide for a consolidated return concept. Management expects the Brazil tax loss carryforwards to be utilized at various periods beginning in 2013 through approximately 2032. This estimate is based on Management forecasts and if those forecasts are not met, the utilization period will be longer. This forecasted utilization period reflects the impact of the 30% limitation as well as allowable deductions for goodwill, including that arising from recent acquisitions, and the impact of various federal and state tax incentives. The remaining tax loss carryforwards expire at various periods beginning in 2013 through the year 2028.

Income Tax Valuation Allowances – Bunge continually assesses the adequacy of its valuation allowances and recognizes tax benefits only when it is more likely than not that the benefits will be realized. In evaluating its ability to realize its deferred tax assets, Bunge considers all available positive and negative evidence including historical and projected operating results and taxable income, the scheduled reversal of deferred tax liabilities, and ongoing tax planning on a jurisdiction by jurisdiction or entity by entity basis, as appropriate under existing tax laws of its operating jurisdictions. The utilization of deferred tax assets depends on the generation of future taxable income during the periods in which the related temporary differences become deductible.

For the year ended 2012, 2011 and 2010, respectively, income tax expense increased \$257 million, decreased \$11 million, and increased \$128 million from changes in valuation allowances. The increase in valuation allowances in 2012 is due primarily to Bunge booking a full valuation allowance on deferred tax

assets from net operating loss carryforwards of Brazil Fertilizer businesses.

Uncertain Tax Liabilities – ASC Topic 740 requires applying a “more likely than not” threshold to the recognition and de-recognition of tax benefits. At December 31, 2012 and 2011, respectively, Bunge had recorded tax liabilities of \$98 million and \$109 million in other non-current liabilities and \$10 million and \$7 million in current liabilities in its consolidated balance sheets. During 2012, 2011 and 2010, respectively, Bunge recognized \$(1) million, \$(3) million and \$(2) million in interest and penalties in income tax benefit (expense) in the consolidated statements of income. Accrued interest and penalties are included within the related tax liability line in the consolidated balance sheet. A reconciliation of the beginning and ending amount of unrecognized tax benefits follows:

(US\$ in millions)	2012	2011	2010
Balance at January 1,	\$116	\$102	\$111
Additions based on tax positions related to the current year	12	13	1
Additions based on tax positions related to prior years	8	17	7
Reductions for tax positions of prior years	(2)	-	-
Settlement or clarification from tax authorities	(3)	(7)	(2)
Expiration of statute of limitations	(22)	(3)	(7)
Sale of Brazilian fertilizer nutrients assets	-	-	(6)
Foreign currency translation	(1)	(6)	(2)
Balance at December 31,	\$108	\$116	\$102

Substantially all of the unrecognized tax benefits balance, if recognized, would affect Bunge's effective income tax rate. Bunge believes that it is reasonably possible that approximately \$2 million of its unrecognized tax benefits, each of which are individually insignificant, may be recognized by the end of 2013 as a result of a lapse of the statute of limitations or settlement with the tax authorities.

Bunge, through its subsidiaries, files income tax returns in the United States (federal and various states) and non-United States jurisdictions. The table below reflects the tax years for which Bunge is subject to income tax examinations by tax authorities:

	OPEN TAX YEARS
North America	2005 - 2012
South America	2005 - 2012
Europe	2005 - 2012
Asia	2002 - 2012

During 2011, the Brazilian IRS commenced an examination of the income tax returns of one of Bunge's Brazilian subsidiaries for the years 2005-2009 and proposed adjustments totaling approximately \$160 million plus applicable interest and penalties. Management, in consultation with external legal advisors, has reviewed and responded to the proposed

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

14. INCOME TAXES (Continued)

adjustments and believes that it is more likely than not that it will prevail and therefore, has not recorded an uncertain tax liability.

In 2010, the Brazilian IRS had proposed certain significant adjustments to the income tax returns for one of Bunge's Brazilian subsidiaries for the years 2005 to 2007. The proposed adjustments totaled approximately \$525 million plus applicable interest and penalties. In late 2011, Bunge received a decision from the Tax Inspector that dismissed approximately \$170 million of the Brazilian IRS's case against Bunge. Management is appealing the remainder of the case, and has not changed its position that it is more likely than not that it will prevail and therefore, has not recorded an uncertain tax liability.

Bunge paid income taxes, net of refunds received, of \$804 million, \$592 million and \$398 million during the years ended December 31, 2012, 2011 and 2010, respectively. These net payments include payments of estimated income taxes in accordance with applicable tax laws, primarily in Brazil, requiring such interim estimated payments. For 2012 and 2011, estimated tax payments during those years exceeded the annual amounts ultimately determined to be owed for the full years by \$99 million and \$88 million, respectively. In accordance with applicable tax laws, these overpayments may be recoverable from future income taxes or non-income taxes payable.

15. FINANCIAL INSTRUMENTS AND FAIR VALUE MEASUREMENTS

Bunge's various financial instruments include certain components of working capital such as cash and cash equivalents, trade accounts receivable and trade accounts payable. Additionally, Bunge uses short and long-term debt to fund operating requirements. Cash and cash equivalents, trade accounts receivable, trade accounts payable and short-term debt are stated at their carrying value, which is a reasonable estimate of fair value. See Note 18 for deferred purchase price receivable (DPP) related to sales of trade receivables. See Note 12 for long-term receivables from farmers in Brazil, net and other long-term investments and see Note 17 for long-term debt. Bunge's financial instruments also include derivative instruments and marketable securities, which are stated at fair value.

Fair value is the expected price that would be received for an asset or paid to transfer a liability (an exit price) in Bunge's principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the

measurement date. Bunge determines the fair values of its readily marketable inventories, derivatives and certain other assets based on the fair value hierarchy established in ASC Topic 820 *Fair Value Measurements and Disclosures*, which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. Observable inputs are inputs based on market data obtained from sources independent of Bunge that reflect the assumptions market participants would use in pricing the asset or liability. Unobservable inputs are inputs that are developed based on the best information available in circumstances that reflect Bunge's own assumptions based on market data and on assumptions that market participants would use in pricing the asset or liability. The standard describes three levels within its hierarchy that may be used to measure fair value.

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities. Level 1 assets and liabilities include exchange traded derivative contracts.

Level 2: Observable inputs, including Level 1 prices (adjusted); quoted prices for similar assets or liabilities; quoted prices in markets that are less active than traded exchanges; and other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities. Level 2 assets and liabilities include readily marketable inventories and over-the-counter (OTC) commodity purchase and sale contracts and other OTC derivatives whose value is determined using pricing models with inputs that are generally based on exchange traded prices, adjusted for location specific inputs that are primarily observable in the market or can be derived principally from or corroborated by observable market data.

Level 3: Unobservable inputs that are supported by little or no market activity and that are a significant component of the fair value of the assets or liabilities. In evaluating the significance of fair value inputs, Bunge gives consideration to items that individually, or when aggregated with other inputs, generally represent more than 10% of the fair value of the assets or liabilities. For such identified inputs which are primarily related to inland transportation costs, judgments are required when evaluating both quantitative and qualitative factors in the determination of significance for purposes of fair value level classification and disclosure. Level 3 assets and liabilities include assets and liabilities whose value is determined using proprietary pricing models, discounted cash flow methodologies, or similar techniques, as well as assets and liabilities for which the determination of fair value requires significant management judgment or estimation. Bunge believes a change in these inputs would not result in a significant change in the fair values.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

15. FINANCIAL INSTRUMENTS AND FAIR VALUE MEASUREMENTS (Continued)

The majority of Bunge's exchange traded agricultural commodity futures are settled daily generally through its clearing subsidiary and therefore such futures are not included in the table below. Assets and liabilities are classified in their entirety based on the lowest level of input that is a significant component of the fair value measurement. The lowest level of input is considered Level 3. Bunge's assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect the classification of fair value assets and liabilities within the fair value hierarchy levels. The following table sets forth by level Bunge's assets and liabilities that were accounted for at fair value on a recurring basis.

(US\$ in millions)	FAIR VALUE MEASUREMENTS AT REPORTING DATE							
	DECEMBER 31, 2012				DECEMBER 31, 2011			
	LEVEL 1	LEVEL 2	LEVEL 3	TOTAL	LEVEL 1	LEVEL 2	LEVEL 3	TOTAL
Assets:

Total liabilities	\$199	\$ 786	\$200	\$1,185	\$152	\$1,087	\$131	\$1,370

(1) Unrealized gains on designated and undesignated derivative contracts are generally included in other current assets. There are no such amounts included in other non-current assets at December 31, 2012 and 2011, respectively.

(2) Other assets include primarily the fair values of U.S. Treasury securities held as margin deposits and other marketable securities.

(3) Unrealized losses on designated and undesignated derivative contracts are generally included in other current liabilities. There are no such amounts included in other non-current liabilities at December 31, 2012 and 2011, respectively.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

15. FINANCIAL INSTRUMENTS AND FAIR VALUE MEASUREMENTS (Continued)

Derivatives – Exchange traded futures and options contracts are valued based on unadjusted quoted prices in active markets and are classified within Level 1. Bunge's forward commodity purchase and sale contracts are classified as derivatives along with other OTC derivative instruments relating primarily to freight, energy, foreign exchange and interest rates, and are classified within Level 2 or Level 3 as described below. Bunge estimates fair values based on exchange quoted prices, adjusted as appropriate for differences in local markets. These differences are generally valued using inputs from broker or dealer quotations, or market transactions in either the listed or OTC markets. In such cases, these derivative contracts are classified within Level 2. Changes in the fair values of these contracts are recognized in the consolidated financial statements as a component of cost of goods sold, foreign exchange gains (losses), interest income (expense), other income (expense), net or other comprehensive income (loss).

OTC derivative contracts include swaps, options and structured transactions that are valued at fair value generally determined using quantitative models that require the use of multiple market inputs including quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets which are not highly active, other observable inputs relevant to the asset or liability, and market inputs corroborated by correlation or other means. These valuation models include inputs such as interest rates, prices and indices to generate continuous yield or pricing curves and volatility factors. Where observable inputs are available for substantially the full term of the asset or liability, the instrument is categorized in Level 2. Certain OTC derivatives trade in less active markets with less availability of pricing information and certain structured transactions can require internally developed model inputs that might not be observable in or corroborated by the market. When unobservable inputs have a significant impact on the measurement of fair value, the instrument is categorized in Level 3.

Bunge's policy is to only classify exchange traded or cleared derivative contracts in Level 1, thus transfers of assets and liabilities into and/or out of Level 1 occur infrequently. Transfers into Level 1 would generally only be expected to occur when an exchange cleared derivative contract historically valued using a valuation model as the result of a lack of observable inputs becomes sufficiently observable, resulting in the valuation price being essentially the exchange traded price. There were no significant transfers into or out of Level 1 during the periods presented.

Bunge may designate certain derivative instruments as either fair value hedges or cash flow hedges and assesses, both at inception of the hedge and on an ongoing basis, whether derivatives that are designated as hedges are highly effective

in offsetting changes in the hedged items or anticipated cash flows.

Readily marketable inventories – The majority of Bunge's readily marketable commodity inventories are valued at fair value. These agricultural commodity inventories are readily marketable, have quoted market prices and may be sold without significant additional processing. Changes in the fair values of these inventories are recognized in the consolidated statements of income as a component of cost of goods sold.

Readily marketable inventories reported at fair value are valued based on commodity futures exchange quotations, broker or dealer quotations, or market transactions in either listed or OTC markets with appropriate adjustments for differences in local markets where Bunge's inventories are located. In such cases, the inventory is classified within Level 2. Certain inventories may utilize significant unobservable data related to local market adjustments to determine fair value. In such cases, the inventory is classified as Level 3.

If Bunge used different methods or factors to determine fair values, amounts reported as unrealized gains and losses on derivative contracts and readily marketable inventories at fair value in the consolidated balance sheets and consolidated statements of income could differ. Additionally, if market conditions change subsequent to the reporting date, amounts reported in future periods as unrealized gains and losses on derivative contracts and readily marketable inventories at fair value in the consolidated balance sheets and consolidated statements of income could differ.

Level 3 Valuation – Bunge's assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the classification of assets and liabilities within the fair value hierarchy. In evaluating the significance of fair value inputs, Bunge gives consideration to items that individually, or when aggregated with other inputs, represent more than 10% of the fair value of the asset or liability. For such identified inputs, judgments are required when evaluating both quantitative and qualitative factors in the determination of significance for purposes of fair value level classification and disclosure. Because of differences in the availability of market pricing data over their terms, inputs for some assets and liabilities may fall into any one of the three levels in the fair value hierarchy or some combination thereof. While FASB guidance requires Bunge to classify these assets and liabilities in the lowest level in the hierarchy for which inputs are significant to the fair value measurement, a portion of that measurement may be determined using inputs from a higher level in the hierarchy.

The significant unobservable inputs resulting in Level 3 classification relate to freight in the interior of Brazil and the lack of market corroborated information in Canada. In both situations, Bunge uses proprietary information such as purchase and sale contracts and contracted prices for freight, premiums and discounts to value its contracts. Movements in

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

15. FINANCIAL INSTRUMENTS AND FAIR VALUE MEASUREMENTS (Continued)

the price of these unobservable inputs alone would not have a material effect on Bunge's financial statements as these contracts do not typically exceed one future crop cycle.

Transfers in and/or out of Level 3 represent existing assets or liabilities that were either previously categorized as a higher level for which the inputs to the model became unobservable or assets and liabilities that were previously classified as Level 3 for which the lowest significant input became observable during the period. Bunge's policy regarding the timing of transfers between levels is to record the transfers at the beginning of the reporting period.

Level 3 Derivatives – Level 3 derivative instruments utilize both market observable and unobservable inputs within the fair value measurements. These inputs include commodity prices, price volatility factors, interest rates, volumes and locations. In addition, with the exception of the exchange cleared instruments where Bunge clears trades through an exchange, Bunge is exposed to loss in the event of the non-performance by counterparties on over-the-counter derivative instruments and forward purchase and sale contracts. Adjustments are made to fair values on occasions when non-performance risk is determined to represent a significant input in Bunge's fair value determination. These adjustments are based on Bunge's estimate of the potential loss in the event of counterparty non-performance. Bunge did not have significant allowances related to non-performance by counterparties at December 31, 2012 and 2011.

Level 3 Readily marketable inventories – Readily marketable inventories are considered Level 3 when at least one significant assumption or input is unobservable. These assumptions or unobservable inputs include certain management estimations regarding costs of transportation and other local market or location-related adjustments.

The tables below present reconciliations for all assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3) during the years ended December 31, 2012 and 2011. Level 3 instruments presented in the tables include readily marketable inventories and derivatives. These instruments were valued using pricing models that, in management's judgment, reflect the

assumptions that would be used by a marketplace participant to determine fair value.

Derivative Instruments

Interest rate derivatives – Interest rate swaps used by Bunge as hedging instruments are recorded at fair value in the consolidated balance sheets with changes in fair value recorded contemporaneously in earnings. Certain of these swap agreements may be designated as fair value hedges. The carrying amount of the associated hedged debt is also adjusted through earnings for changes in the fair value arising from changes in benchmark interest rates. Ineffectiveness is recognized to the extent that these two adjustments do not offset. Bunge may enter into interest rate swap agreements for the purpose of managing certain of its interest rate exposures. Bunge may also enter into interest rate basis swap agreements that do not qualify as hedges for accounting purposes. Changes in fair value of such interest rate basis swap agreements are recorded in earnings. There were no outstanding interest rate swap agreements as of December 31, 2012 or 2011.

Bunge recognized approximately zero, \$6 million and \$9 million as a reduction in interest expense in the consolidated statements of income for the years ended December 31, 2012, 2011 and 2010, respectively, relating to interest rate swap agreements outstanding during the respective periods. In addition, during the years ended December 31, 2012, 2011 and 2010, Bunge recognized gains of approximately \$20 million, \$13 million and \$11 million, respectively, as a reduction of interest expense in the consolidated statements of income, related to the amortization of deferred gains on termination of interest rate swap agreements.

Foreign exchange derivatives – Bunge uses a combination of foreign exchange forward swap and option contracts in certain of its operations to mitigate the risk from exchange rate fluctuations in connection with certain commercial and balance sheet exposures. The foreign exchange forward swap and option contracts may be designated as cash flow hedges. Bunge may also use net investment hedges to partially offset the translation adjustments arising from the remeasurement of its investment in certain of its foreign subsidiaries.

Bunge assesses, both at the inception of the hedge and on an ongoing basis, whether the derivatives that are used in hedge transactions are highly effective in offsetting changes in the hedged items.

The table below summarizes the notional amounts of open foreign exchange positions.

(1) Exchange traded futures and options are presented on a net (short) and long position basis.

(2) Non-exchange traded swaps, options and forwards are presented on a gross (short) and long position basis.

Commodity derivatives – Bunge uses derivative instruments to manage its exposure to movements associated with agricultural commodity prices. Bunge generally uses exchange traded futures and options contracts to minimize the effects of changes in the prices of agricultural commodities on its agricultural commodity inventories and forward purchase and sale contracts, but may also from time to time enter into OTC commodity transactions, including swaps, which are settled in cash at maturity or termination based on exchange-quoted futures prices. Changes in fair values of exchange traded futures contracts representing the unrealized gains and/or losses on these instruments are settled daily generally through Bunge's wholly-owned futures clearing subsidiary. Forward purchase and sale contracts are primarily settled through delivery of agricultural commodities. While Bunge considers these exchange traded futures and forward purchase and sale contracts to be effective economic hedges, Bunge does not designate or account for the majority of its commodity contracts as hedges. Changes in fair values of these contracts and related readily marketable agricultural commodity inventories are included in cost of goods sold in the consolidated statements of income. The forward contracts require performance of both Bunge and the contract counterparty in future periods. Contracts to purchase agricultural commodities generally relate to current or future crop years for delivery periods quoted by regulated commodity

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

15. FINANCIAL INSTRUMENTS AND FAIR VALUE MEASUREMENTS (Continued)

exchanges. Contracts for the sale of agricultural commodities generally do not extend beyond one future crop cycle.

(1) Exchange traded futures and options are presented on a net (short) and long position basis.

(2) Non-exchange traded swaps, options and forwards are presented on a gross (short) and long position basis.

Ocean freight derivatives – Bunge uses derivative instruments referred to as freight forward agreements, or FFAs, and FFA options to hedge portions of its current and anticipated ocean freight costs. A portion of the ocean freight derivatives may be designated as fair value hedges of Bunge's firm commitments to purchase time on ocean freight vessels. Changes in the fair value of the ocean freight derivatives that are qualified, designated and highly effective as a fair value hedge, along with the gain or loss on the hedged firm commitments to purchase time on ocean freight vessels that is attributable to the hedged risk, are recorded in earnings. Changes in the fair values of ocean freight derivatives that are not designated as hedges are also recorded in earnings.

The table below summarizes the open ocean freight positions.

Total	\$ -	\$33		\$ -		\$ -

(1) The gain or (loss) recognized relates to the effective portion of the hedging relationship. At December 31, 2011, Bunge expected to reclassify into income in the next 12 months approximately \$6 million of after tax gains related to its agricultural commodities cash flow hedges. As of December 31, 2011, there were no designated agricultural commodity cash flow hedges outstanding.

(2) The gain or (loss) recognized relates to the ineffective portion of the hedging relationship and to the amount excluded from the assessment of hedging effectiveness.

(3) The amount of gain recognized in income is \$5 million, which relates to the ineffective portion of the hedging relationships, and zero, which relates to the amount excluded from the assessment of hedge effectiveness.

(4) The foreign exchange forward contracts matured at various dates in 2012.

(5) In 2011, Bunge entered into *euro* and Canadian dollar forward contracts to receive U.S. dollars and sell Euros and Canadian dollars forward to offset the translation adjustment of its net investments in *euro* and Canadian dollar assets. During 2011, Bunge de-designated the forward contracts as net investment hedges and recognizes gains or losses due to changes in exchange rates on the de-designated forward contracts in the income statement from the date of de-designation until maturity.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

16. SHORT-TERM DEBT AND CREDIT FACILITIES

Bunge's short-term borrowings are typically sourced from various banking institutions and the U.S. commercial paper market. Bunge also borrows from time to time in local currencies in various foreign jurisdictions. Interest expense includes facility commitment fees, amortization of deferred financing costs and charges on certain lending transactions, including certain intercompany loans and foreign currency conversions in Brazil. The weighted-average interest rate on short-term borrowings at December 31, 2012 and 2011 was 6.59% and 4.47%, respectively.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Lines of credit:		
Unsecured, variable interest rates from 0.02% to 39.98% ⁽¹⁾	\$1,598	\$ 719
Total short-term debt	\$1,598	\$ 719

(1) Includes \$378 million of local currency borrowings in certain Eastern European, South American and Asian countries at a weighted-average interest rate of 18.78% as of December 31, 2012 and \$97 million at a weighted average interest rate of 22.72% as of December 31, 2011.

In June 2012, Moody's Investor Services downgraded the credit ratings of certain financial institutions, including two banks with an aggregate commitment of \$74 million under Bunge's \$600 million liquidity facility. As these banks no longer met the minimum ratings required to participate in the liquidity facility following the downgrades, these banks' commitments under the liquidity facility were terminated and the amount available under the facility was reduced by \$74 million to \$526 million. Consequent to the reduction of the liquidity facility, the size of Bunge's commercial paper program was also simultaneously reduced to \$526 million.

At December 31, 2012, Bunge had no outstanding amounts under its \$526 million commercial paper program. The commercial paper program is supported by committed back-up bank credit lines (the liquidity facility) equal to the amount of the commercial paper program provided by lending institutions that are rated at least A-1 by Standard & Poor's and P-1 by Moody's Investors Services. The liquidity facility, which matures in November 2016, permits Bunge, at its option, to set up direct borrowings or issue commercial paper in an aggregate amount of up to \$526 million. The cost of borrowing under the liquidity facility would typically be higher than the cost of borrowing under Bunge's commercial paper program. At December 31, 2012, no borrowings were outstanding under these committed back-up bank credit lines. In January 2013, Bunge increased the commitments under the liquidity facility to \$600 million and therefore simultaneously increased the size of Bunge's commercial paper program to \$600 million.

In addition to the committed facilities noted above, from time to time, Bunge enters into uncommitted short-term credit lines as necessary based on its liquidity requirements. At December 31, 2012, \$1,000 million was outstanding under these uncommitted short-term credit lines. In addition, Bunge's operating companies had \$598 million in short-term borrowings outstanding from local bank lines of credit at December 31, 2012 to support working capital requirements.

17. LONG-TERM DEBT

Long-term debt obligations are summarized below.

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Revolving credit facilities	\$ -	\$ 250
Term loan due 2013 - fixed interest rate of 3.32% (Tranche A)	300	300
Term loan due 2013 - variable interest rate of LIBOR plus 1.38% (Tranche B) ⁽¹⁾	100	-
5.875% Senior Notes due 2013	300	300
5.35% Senior Notes due 2014	500	500
5.10% Senior Notes due 2015	382	382
4.10% Senior Notes due 2016	500	500
3.20% Senior Notes due 2017	600	-
5.90% Senior Notes due 2017	250	250
8.50% Senior Notes due 2019	600	600
BNDES loans, variable interest rate indexed to TJLP plus 3.20% payable through 2016 ⁽²⁾⁽³⁾	42	64
Other	323	216
Subtotal	3,897	3,362
Less: Current portion of long-term debt	(719)	(14)
Total long-term debt excluding investment fund debt	3,178	3,348
Consolidated non-recourse investment fund debt ⁽⁴⁾	354	-
Total long-term debt	\$3,532	\$ 3,348

(1) In August 2012, the \$300 million 3.32% fixed rate term loan credit facility was amended to include additional borrowing capacity of \$100 million carrying a variable interest rate of LIBOR plus 1.38%.

(2) Industrial development loans provided by BNDES, an agency of the Brazilian government.

(3) TJLP is a long-term interest rate published by the BNDES on a quarterly basis; TJLP was 5.00% per annum at December 31, 2012 and 6.00% per annum at December 31, 2011.

(4) Long-term debt of consolidated investment funds at December 31, 2012 with no recourse to Bunge maturing at various dates through 2017.

The fair values of long-term debt, including current portion, at December 31, 2012 and 2011 were \$4,581 million and \$3,676 million, respectively, calculated based on interest rates currently available on comparable maturities to companies with credit standing similar to that of Bunge. The fair value of Bunge's long-term debt is based on interest rates currently available on comparable maturities to companies with credit standing similar to that of Bunge.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

17. LONG-TERM DEBT (Continued)

The carrying amounts and fair value of long-term debt are as follows:

(US\$ in millions)	DECEMBER 31, 2012			DECEMBER 31, 2011	
	CARRYING VALUE	FAIR VALUE (LEVEL 2)	FAIR VALUE (LEVEL 3)	CARRYING VALUE	FAIR VALUE (LEVEL 2)
Long-term debt including current portion	\$4,251	\$4,322	\$259	\$3,362	\$3,676

In October 2012, Bunge increased the available amount under its syndicated \$1,000 million revolving credit facility which matures on November 17, 2016 to \$1,085 million. Borrowings under this credit facility bear interest at LIBOR plus an applicable margin ranging from 1.125% to 1.75%, based on the credit ratings of its long-term senior unsecured debt. Amounts under the credit facility that remain undrawn are subject to commitment fees payable each quarter based on the average undrawn portion of the credit facility at rates ranging from 0.125% to 0.275% per annum, based generally on the credit ratings of Bunge's long-term senior unsecured debt. There were no borrowings outstanding under this credit agreement at December 31, 2012.

In June 2012, Bunge completed the sale of \$600 million aggregate principal amount of senior unsecured notes (senior notes) bearing interest at 3.20%, maturing on June 15, 2017. The senior notes were issued by Bunge's 100% owned finance subsidiary, Bunge Limited Finance Corp., and are fully and unconditionally guaranteed by Bunge Limited. The offering was made pursuant to a registration statement filed with the U.S. Securities and Exchange Commission. The net proceeds of \$595 million were used for general corporate purposes including, but not limited to, the repayment of outstanding indebtedness, which includes indebtedness under revolving credit facilities.

In March 2012, Bunge acquired and consolidated an asset management company including certain investment funds for which Bunge has been deemed to be the primary beneficiary. This resulted in an increase in long-term debt attributable to these investment funds of \$354 million at December 31, 2012. The debt acquired primarily consists of third-party debt and loans from limited partners in certain of the investment funds. Bunge has elected to record the loans from these limited partners at fair value on a recurring basis. This debt is not an obligation of Bunge and the investment funds' creditors do not have any recourse to Bunge under the relevant debt agreements. At December 31, 2012, the fair value of these loans, a Level 3 measurement, was \$259 million.

At December 31, 2012, Bunge had approximately \$2,835 million of unused and available borrowing capacity

under its committed long-term credit facilities with a number of lending institutions.

Certain land, property, equipment and investments in consolidated subsidiaries having a net carrying value of approximately \$137 million at December 31, 2012 have been mortgaged or otherwise collateralized against long-term debt of \$130 million at December 31, 2012.

Principal Maturities – Principal maturities of long-term debt at December 31, 2012 are as follows:

(US\$ in millions)	
2013	\$ 716
2014	752
2015	466
2016	518
2017	1,031
Thereafter	723
Total ⁽¹⁾	<u>\$4,206</u>

(1) Excludes unamortized net gains of \$45 million related to terminated interest rate swap agreements recorded in long-term portion of debt.

Bunge's credit facilities and certain senior notes require it to comply with specified financial covenants related to minimum net worth, minimum current ratio, a maximum debt to capitalization ratio and limitations on secured indebtedness. Bunge was in compliance with these covenants at December 31, 2012.

During the years ended December 31, 2012, 2011 and 2010, Bunge paid interest, net of interest capitalized, of \$259 million, \$208 million and \$247 million, respectively.

In July 2010, Bunge redeemed certain senior notes and repaid certain term loans and subsidiary long-term debt with an aggregate principal amount of \$827 million. These transactions resulted in a loss on extinguishment of debt of approximately \$90 million, related to make-whole payments, which was included in the consolidated statements of income for the year ended December 31, 2010.

18. TRADE RECEIVABLES SECURITIZATION PROGRAM

On June 1, 2011, Bunge and certain of its subsidiaries entered into a trade receivables securitization program (the Program) with a financial institution, as administrative agent, and certain commercial paper conduit purchasers and committed purchasers (collectively, the Purchasers) that provides for funding up to \$700 million against receivables sold into the program. The securitization program is designed to enhance Bunge's financial flexibility by providing an additional source of liquidity for its operations. In connection with the securitization program, certain of Bunge's U.S. and non-U.S. subsidiaries that originate trade receivables may sell eligible receivables in their entirety on a revolving basis to a consolidated bankruptcy remote special purpose entity, Bunge Securitization B.V. (BSBV)

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

18. TRADE RECEIVABLES SECURITIZATION PROGRAM (Continued)

formed under the laws of The Netherlands. BSBV in turn sells such purchased trade receivables to the administrative agent (acting on behalf of the Purchasers) pursuant to a receivables transfer agreement. In connection with these sales of accounts receivable, Bunge receives a portion of the proceeds up front and an additional amount upon the collection of the underlying receivables (a deferred purchase price), which is expected to be generally between 10% and 15% of the aggregate amount of receivables sold through the program.

Bunge Finance B.V. (BFBV), a wholly-owned subsidiary of Bunge, acts as master servicer, responsible for servicing and collecting the accounts receivable for the securitization program. The securitization program terminates on June 1, 2016. However, each committed purchaser's commitment to fund trade receivables sold under the securitization program will terminate on May 29, 2013 unless extended for additional 364-day periods in accordance with the terms of the receivables transfer agreement. The trade receivables sold under the securitization program are subject to specified eligibility criteria, including eligible currencies and country and obligor concentration limits. BSBV purchases trade receivables from the originating Bunge subsidiaries using (i) proceeds from the sale of receivables to the administrative agent, (ii) collections of the deferred purchase price and (iii) borrowings from BFBV under a revolving subordinated loan facility.

At December 31, 2012 and 2011, \$772 million and \$836 million, respectively, of receivables sold under the Program were derecognized from Bunge's consolidated balance sheets. Proceeds received in cash related to transfers of receivables under the program totaled \$13,823 million and \$7,531 million for the year ended December 31, 2012 and the period from inception of the program (June 1, 2011) through December 31, 2011, respectively. In addition, cash collections from customers on receivables previously sold were \$14,031 million and \$6,872 million for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011. As this is a revolving facility, cash collections from customers are reinvested to fund new receivable sales. Gross receivables sold under the program for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011 were \$14,054 million and \$7,778 million, respectively. These sales resulted in discounts of \$19 million and \$5 million for the year ended December 31, 2012 and the period from inception of the program through December 31, 2011, which were included in SG&A in the consolidated statements of income. Servicing fees under the program were not significant in any period.

Bunge's risk of loss following the sale of the accounts receivable is limited to the deferred purchase price receivable, which was \$134 million and \$192 million at December 31, 2012 and 2011, respectively, and is included in other current assets in the consolidated balance sheets (see Note 6). The deferred purchase price will be repaid in cash as receivables are collected, generally within 30 days. Delinquencies and credit losses on accounts receivable sold under the program during the year ended December 31, 2012 and the period from inception of the program through December 31, 2011 were insignificant. Bunge has reflected all cash flows under the securitization program as operating cash flows in the consolidated statements of cash flows for the year ended December 31, 2012 and 2011, including changes in the fair value of the deferred purchase price of \$4 million for the year ended December 31, 2012 and \$4 million for the period from inception of the program through December 31, 2011.

19. PENSION PLANS

Employee Defined Benefit Plans – Certain U.S., Canadian, European and Brazilian based subsidiaries of Bunge sponsor non-contributory defined benefit pension plans covering substantially all employees of the subsidiaries. The plans provide benefits based primarily on participants' salary and length of service.

The funding policies for Bunge's defined benefit pension plans are determined in accordance with statutory funding requirements. The most significant defined benefit plan is in the United States. The U.S. funding policy requires at least those amounts required by the Pension Protection Act of 2006. Assets of the plans consist primarily of equity and fixed income investments.

Plan Amendments and Transfers In and Out – There were no significant amendments, settlements or transfers in to or out of Bunge's employee benefit plans during the years ended December 31, 2012 or 2011.

In 2010, there was a transfer out that resulted from the divestiture of Bunge's Brazilian fertilizer nutrients assets (see Note 3), which included its Brazil-based fertilizer subsidiary, Ultrafertil, SA (Ultrafertil). Ultrafertil was a participating sponsor in a frozen multiple-employer defined benefit pension plan (the Petros Plan) that was managed by Fundação Petrobras de Seguridade Social (Petros). The Petros Plan began in 1970 prior to the Brazilian government's deregulation of the fertilizer industry in Brazil. The Petros Plan was funded in accordance with Brazilian statutory requirements. The sale of Bunge's investment in Ultrafertil as part of the Brazilian fertilizer nutrients assets sale transaction resulted in a settlement of the Plan of approximately \$42 million for accounting purposes.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

19. PENSION PLANS (Continued)

Included in accumulated other comprehensive income at December 31, 2012 are the following amounts that have not yet been recognized in net periodic benefit costs: unrecognized initial net asset of \$1 million (zero, net of tax), unrecognized prior service cost of \$7 million (\$5 million, net of tax) and unrecognized actuarial loss of \$218 million (\$142 million, net of tax). The prior service cost included in accumulated other comprehensive income that is expected to be recognized in net periodic benefit costs in 2013 is \$2 million (\$1 million, net of tax) and unrecognized actuarial loss of \$18 million (\$12 million, net of tax).

Bunge has aggregated certain U.S. and foreign defined benefit pension plans with projected benefit obligations in excess of fair value of plan assets with pension plans that have fair value of plan assets in excess of projected benefit obligations. At December 31, 2012, the \$607 million and \$163 million projected benefit obligations for U.S. and foreign plans, respectively, include plans with projected benefit obligations of \$607 million and \$116 million, which were in excess of the fair value of related plan assets of \$396 million and \$80 million. At December 31, 2011, the \$513 million and \$143 million projected benefit obligations for U.S. and foreign plans, respectively, include plans with projected benefit obligations of \$513 million and \$36 million, which were in excess of the fair value of related plan assets of \$355 million and \$7 million. The accumulated benefit obligation for the U.S. and foreign defined benefit pension plans, respectively, was \$548 million and \$153 million at December 31, 2012 and \$468 million and \$137 million at December 31, 2011.

The following table summarizes information relating to aggregated U.S. and foreign defined benefit pension plans with an accumulated benefit obligation in excess of plan assets:

(US\$ in millions)	U.S. PENSION BENEFITS DECEMBER 31,		FOREIGN PENSION BENEFITS DECEMBER 31,	
	2012	2011	2012	2011
Projected benefit obligation	\$607	\$513	\$54	\$36
Accumulated benefit obligation	548	468	52	34
Fair value of plan assets	\$396	\$355	\$21	\$ 7

The components of net periodic benefit costs are as follows for U.S. and foreign defined benefit pension plans:

(US\$ in millions)	U.S. PENSION BENEFITS DECEMBER 31,			FOREIGN PENSION BENEFITS DECEMBER 31,		
	2012	2011	2010	2012	2011	2010
Service cost	\$ 18	\$ 15	\$ 13	\$ 8	\$ 7	\$ 3
Interest cost	25	25	24	6	6	22
Expected return on plan assets	(26)	(26)	(24)	(6)	(6)	(25)
Amortization of prior service cost	2	2	2	-	-	1
Amortization of net loss	13	5	5	1	1	-
Settlement loss recognized	-	-	-	1	-	26
Net periodic benefit costs	\$ 32	\$ 21	\$ 20	\$ 10	\$ 8	\$ 27

The weighted-average actuarial assumptions used in determining the benefit obligation under the U.S. and foreign defined benefit pension plans are as follows:

	U.S. PENSION BENEFITS DECEMBER 31,		FOREIGN PENSION BENEFITS DECEMBER 31,	
	2012	2011	2012	2011
Discount rate	4.2%	5.0%	3.3%	4.2%
Increase in future compensation levels	3.8%	3.8%	3.0%	2.7%

The weighted-average actuarial assumptions used in determining the net periodic benefit cost under the U.S. and foreign defined benefit pension plans are as follows:

	U.S. PENSION BENEFITS DECEMBER 31,			FOREIGN PENSION BENEFITS DECEMBER 31,		
	2012	2011	2010	2012	2011	2010
Discount rate	5.0%	6.0%	6.2%	4.2%	4.4%	10.5%
Expected long-term rate of return on assets	7.5%	8.0%	8.0%	4.6%	5.3%	11.4%
Increase in future compensation levels	3.8%	4.2%	4.2%	2.7%	2.4%	6.3%

The sponsoring subsidiaries select the expected long-term rate of return on assets in consultation with their investment advisors and actuaries. These rates are intended to reflect the average rates of earnings expected on the funds invested or to be invested to provide required plan benefits. The plans are assumed to continue in effect as long as assets are expected to be invested.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

19. PENSION PLANS (Continued)

In estimating the expected long-term rate of return on assets, appropriate consideration is given to historical performance for the major asset classes held or anticipated to be held by the applicable plan trusts and to current forecasts of future rates of return for those asset classes. Cash flows and expenses are taken into consideration to the extent that the expected returns would be affected by them. As assets are generally held in qualified trusts, anticipated returns are not reduced for taxes.

Plan Assets – The objectives of the U.S. plans' trust funds are to sufficiently diversify plan assets to maintain a reasonable level of risk without imprudently sacrificing returns, with a target asset allocation of approximately 40% fixed income securities and approximately 60% equities. Bunge implements its investment

strategy through a combination of indexed mutual funds and a proprietary portfolio of fixed income securities. Bunge's policy is not to invest plan assets in Bunge Limited shares.

Plan investments are stated at fair value which is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Plan classifies its investments in Level 1, which refers to securities that are actively traded on a public exchange and valued using quoted prices from active markets for identical assets, Level 2, which refers to securities not traded in an active market but for which observable market inputs are readily available and Level 3, which refers to other assets valued based on significant unobservable inputs.

The fair values of Bunge's U.S. and foreign defined benefit pension plans' assets at the measurement date, by category, are as follows:

(US\$ in millions)	FAIR VALUE MEASUREMENTS AT DECEMBER 31, 2012							
ASSET CATEGORY	TOTAL		QUOTED PRICES IN ACTIVE MARKETS FOR IDENTICAL ASSETS (LEVEL 1)		SIGNIFICANT OBSERVABLE INPUTS (LEVEL 2)		SIGNIFICANT UNOBSERVABLE INPUTS (LEVEL 3)

Total	\$355	\$124	\$293	\$6	\$ 62	\$118	\$ -	\$ -

(1) This category represents a portfolio of equity investments comprised of equity index funds that invest in U.S. equities and non-U.S. equities. The U.S. equities are comprised of investments focusing on large, mid and small cap companies and non-U.S. equities are comprised of international, emerging markets and real estate investment trusts.

(2) This category represents a portfolio of fixed income investments in mutual funds comprised of investment grade U.S. government bonds and notes, foreign government bonds and corporate bonds from diverse industries.

(3) This category represents a portfolio consisting of a mixture of equity, fixed income and cash.

19. PENSION PLANS (Continued)

The table below presents the reconciliation for pension assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3) during the year ended December 31, 2011. At December 31, 2012, there were no significant unobservable inputs (Level 3).

(US\$ in millions)	FAIR VALUE MEASUREMENTS USING SIGNIFICANT UNOBSERVABLE INPUT (LEVEL 3) INSURED ASSET
Beginning balance, January 1, 2011	\$ 49
Actual return on plan assets:	
Relating to assets still held at December 31, 2011	-
Relating to assets sold during 2011	-
Purchase, sales and settlements	-
Transfers out of Level 3 ⁽¹⁾	(49)
Ending balance, December 31, 2011	\$ -

(1) This plan's assets are classified as insured assets and are held by a collective insurance fund. Bunge does not actively participate in the administration or the asset management of the collective fund.

Bunge expects to contribute \$39 million and \$9 million, respectively, to its U.S. and foreign-based defined benefit pension plans in 2013.

The following benefit payments, which reflect future service as appropriate, are expected to be paid related to U.S. and foreign defined benefit pension plans:

(US\$ in millions)	U.S. PENSION BENEFIT PAYMENTS	FOREIGN PENSION BENEFIT PAYMENTS
2013	\$ 21	\$ 9
2014	23	9
2015	26	9
2016	28	9
2017	31	9
2018-2022	182	49

Employee Defined Contribution Plans – Bunge also makes contributions to qualified defined contribution plans for eligible employees. Contributions to these plans amounted to \$14 million, \$14 million and \$12 million during the years ended December 31, 2012, 2011 and 2010, respectively.

20. POSTRETIREMENT HEALTHCARE BENEFIT PLANS

Certain U.S. and Brazil based subsidiaries of Bunge have benefit plans to provide certain postretirement healthcare benefits to eligible retired employees of those subsidiaries. The plans require minimum retiree contributions and define the maximum amount the subsidiaries will be obligated to pay under the plans. Bunge's policy is to fund these costs as they become payable.

Plan Settlements – In 2010, Bunge divested its Brazilian fertilizer nutrients assets (see Notes 3 and 19), which resulted in a settlement of approximately \$32 million.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

20. POSTRETIREMENT HEALTHCARE BENEFIT PLANS (Continued)

The following table sets forth a reconciliation of the changes in the postretirement healthcare benefit plans' benefit obligations and funded status at December 31, 2012 and 2011. A measurement date of December 31 was used for all plans.

(US\$ in millions)	U.S. POSTRETIREMENT HEALTHCARE BENEFITS DECEMBER 31,		FOREIGN POSTRETIREMENT HEALTHCARE BENEFITS DECEMBER 31,	
	2012	2011	2012	2011
Change in benefit obligations:				
Benefit obligation at the beginning of year	\$ 17	\$ 20	\$ 97	\$100
Plan amendments.....	-	-	(3)	-

Employee contributions	1	1	-	-
Plan settlements/divestitures	-	-	(6)	-
Benefits paid	(3)	(2)	(9)	(10)
Impact of foreign exchange rates	-	-	(7)	(12)
Benefit obligation at the end of year.....	\$ 16	\$ 17	\$ 80	\$ 97
Change in plan assets:				
Employer contributions.....	\$ 2	\$ 1	\$ 9	\$ 10
Employee contributions	1	1	-	-
Benefits paid	(3)	(2)	(9)	(10)
Fair value of plan assets at the end of year	\$ -	\$ -	\$ -	\$ -
Funded status and net amounts recognized:				
Plan assets less than benefit obligation.....	\$(16)	\$(17)	\$(80)	\$(97)
Net liability recognized in the balance sheet.....	\$(16)	\$(17)	\$(80)	\$(97)
Amounts recognized in the balance sheet consist of:				
Current liabilities.....	\$ (2)	\$ (2)	\$ (3)	\$ (7)
Non-current liabilities	(14)	(15)	(77)	(90)
Net liability recognized	\$(16)	\$(17)	\$(80)	\$(97)

Included in accumulated other comprehensive income at December 31, 2012 are the following amounts for U.S. and foreign postretirement healthcare benefit plans that have not yet been recognized in net periodic benefit costs: unrecognized prior service credit of \$1 million (zero, net of tax) and zero (zero, net of tax), respectively, and unrecognized actuarial gain (loss) of \$4 million (\$3 million, net of tax) and \$(6) million (\$4) million, net of tax), respectively. Bunge does not expect to recognize any unrecognized prior service credits or unrecognized actuarial losses as components of net periodic benefit costs for its postretirement healthcare benefit plans in 2013.

The components of net periodic benefit costs for U.S. and foreign postretirement healthcare benefit plans are as follows:

(US\$ in millions)	U.S. POSTRETIREMENT HEALTHCARE BENEFITS YEAR ENDED DECEMBER 31,			FOREIGN POSTRETIREMENT HEALTHCARE BENEFITS YEAR ENDED DECEMBER 31,		
	2012	2011	2010	2012	2011	2010
Service cost	\$ -	\$ -	\$ -	\$ 1	\$ 1	\$ 1
Interest cost	1	1	2	9	10	10
Amortization of prior service cost	-	-	-	(7)	(1)	(1)
Amortization of net loss.....	-	-	-	8	1	2
Settlement gain recognized	-	-	-	-	-	(26)
Net periodic benefit costs	\$1	\$1	\$2	\$11	\$11	\$(14)

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

20. POSTRETIREMENT HEALTHCARE BENEFIT PLANS (Continued)

The weighted-average discount rates used in determining the actuarial present value of the accumulated benefit obligations under the U.S. and foreign postretirement healthcare benefit plans are as follows:

	U.S. POSTRETIREMENT HEALTHCARE BENEFITS DECEMBER 31,		FOREIGN POSTRETIREMENT HEALTHCARE BENEFITS DECEMBER 31,	
	2012	2011	2012	2011
Discount rate	3.8%	4.8%	8.8%	10.3%

The weighted-average discount rate assumptions used in determining the net periodic benefit costs under the U.S. and foreign postretirement healthcare benefit plans are as follows:

	U.S. POSTRETIREMENT HEALTHCARE BENEFITS YEAR ENDED DECEMBER 31,			FOREIGN POSTRETIREMENT HEALTHCARE BENEFITS YEAR ENDED DECEMBER 31,		
	2012	2011	2010	2012	2011	2010
Discount rate	4.8%	5.3%	5.8%	10.3%	10.8%	11.3%

At December 31, 2012, for measurement purposes related to U.S. plans, a 9.7% annual rate of increase in the per capita cost of covered healthcare benefits was assumed for 2013, decreasing to 4.5% by 2029, remaining at that level thereafter. At December 31, 2011, for measurement purposes related to U.S. plans, a 10.42% annual rate of increase in the per capita cost of covered healthcare benefits was assumed for 2012. For foreign plans, the assumed annual rate of increase in the per capita cost of covered healthcare benefits averaged 7.74% and 7.63% for 2012 and 2011, respectively.

A one-percentage point change in assumed healthcare cost trend rates would have the following effects:

(US\$ in millions)	ONE- PERCENTAGE POINT INCREASE	ONE- PERCENTAGE POINT DECREASE
Effect on total service and interest cost - U.S. plans	\$ -	\$ -
Effect on total service and interest cost - Foreign plans	\$2	\$(1)
Effect on postretirement benefit obligation - U.S. plans	\$1	\$(1)
Effect on postretirement benefit obligation - Foreign plans	\$9	\$(8)

Bunge expects to contribute \$2 million to its U.S. postretirement healthcare benefit plan and \$12 million to its foreign postretirement healthcare benefit plans in 2013.

The following benefit payments, which reflect expected future service as appropriate, are expected to be paid in the following periods:

(US\$ in millions)	U.S. POSTRETIREMENT HEALTHCARE BENEFIT EXPECTED PAYMENTS	FOREIGN POSTRETIREMENT HEALTHCARE BENEFIT EXPECTED PAYMENTS
2013	\$2	\$ 6
2014	2	6
2015	2	6
2016	2	6
2017	1	7
2018 - 2022	6	35

21. RELATED PARTY TRANSACTIONS

Notes receivable – Bunge holds a note receivable under a revolving credit facility from Bunge-Ergon Vicksburg LLC, a 50% owned U.S. joint venture. The amounts outstanding were \$9 million and \$29 million at December 31, 2012 and 2011, respectively. This note matures in May 2014 with interest payable at a rate of LIBOR plus 2.0%. During the year ended December 31, 2012, Bunge recorded an impairment of \$29 million related to the note receivable. Concurrent with the impairment of the note receivable, Bunge ceased recognition of interest income associated with this loan.

Bunge holds a note receivable from Southwest Iowa Renewable Energy, a 25% owned U.S. investment, having a carrying value of approximately \$37 million and \$27 million at December 31, 2012 and 2011, respectively. This note matures in August 2014 with interest payable at a rate of LIBOR plus 7.5%.

Bunge holds a note receivable from Biodiesel Bilbao S.A., a 20% owned investment in Spain, having a carrying value of approximately \$6 million at December 31, 2012 and 2011. This note matures in December 2015 with interest payable at a rate of 3.9%.

Bunge holds a note receivable from Biocolza-Oleos E Farinhas de Colza S.A., a 40% owned investment in Portugal, having a carrying value of approximately \$6 million and \$5 million at December 31, 2012 and 2011, respectively. This note matures in December 2013 with interest payable at a rate of 8.6%.

Bunge holds a note receivable from Bunge-SCF Grain, LLC., a 50% owned investment in the U.S., having a carrying value of approximately \$6 million at December 31, 2012. This is a revolving note with interest payable at a rate of LIBOR plus 3.25%.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

21. RELATED PARTY TRANSACTIONS (Continued)

Bunge holds a note receivable from Sabina, a 1% owned investment in the U.S., having a carrying value of approximately \$8 million at December 31, 2012. This is a revolving note with interest payable at a rate of LIBOR plus 3.5%.

Bunge holds a note receivable from Senwes Limited, its partner in the Bunge Senwes joint venture in South Africa, having a carrying value of approximately \$6 million at December 31, 2012. This is a revolving note with interest payable at a rate of South African primer minus 2.5%.

Bunge has recognized interest income related to these notes receivable of approximately \$2 million, \$2 million and \$4 million for the years ended December 31, 2012, 2011 and 2010, respectively, in interest income in its consolidated statements of income. Notes receivable at December 31, 2012 and 2011, with carrying values of \$87 million and \$79 million, respectively, are included in other current assets or other non-current assets in the consolidated balance sheets, according to payment terms.

Notes payable – Bunge has a note payable with a carrying value of \$7 million at both December 31, 2012 and 2011, to a joint venture partner in a port terminal in Brazil. The *real*-denominated note is payable on demand with interest payable annually at the Brazilian interbank deposit rate 8.4% at December 31, 2012. This notes payable is included in other current liabilities in Bunge's consolidated balance sheets at December 31, 2012 and 2011. Bunge recorded interest expense of approximately \$1 million in each of the years ended December 31, 2012, 2011 and 2010 related to this note.

Other – Bunge purchased soybeans, other commodity products and phosphate-based products from certain of its unconsolidated joint ventures, which totaled \$685 million, \$835 million and \$525 million for the years ended December 31, 2012, 2011 and 2010, respectively. Bunge also sold soybean and other commodity products to certain of these joint ventures, which totaled \$592 million, \$452 million and \$478 million for the years ended December 31, 2012, 2011 and 2010, respectively. At December 31, 2012 and 2011, Bunge had approximately \$169 million and \$67 million, respectively, of receivables from these joint ventures recorded in trade accounts receivable in the consolidated balance sheets as of those dates. In addition, at December 31, 2012 and 2011, Bunge had approximately \$128 million and \$32 million, respectively, of payables to these joint ventures recorded in trade accounts payable in the consolidated balance sheets. In addition, Bunge provided services during the year ended December 31, 2012 to its unconsolidated joint ventures including \$51 million of tolling services, \$8 million of administrative support services and \$19 million of other services. Bunge believes these transaction values are similar to those that would be conducted with third parties.

22. COMMITMENTS AND CONTINGENCIES

Bunge is party to a large number of claims and lawsuits, primarily tax and labor claims in Brazil and tax claims in Argentina, arising in the normal course of business. The ability to predict the ultimate outcome of such matters involves judgments, estimates and inherent uncertainties. Bunge records liabilities related to its general claims and lawsuits when the exposure item becomes probable and can be reasonably estimated. The range of possible losses for such matters cannot be reasonably estimated and could differ materially from amounts already accrued by the Company. After taking into account the recorded liabilities for these matters, management believes that the ultimate resolution of such matters will not have a material effect on Bunge's financial condition, results of operations or liquidity. Included in other non-current liabilities at December 31, 2012 and 2011 are the following amounts related to these matters:

(US\$ in millions)	DECEMBER 31,	
	2012	2011
Tax claims	\$ 70	\$ 70
Labor claims	75	77
Civil and other claims	109	76
Total	<u>\$254</u>	<u>\$223</u>

Tax Claims – The tax claims relate principally to claims against Bunge's Brazilian subsidiaries, primarily value-added tax claims (ICMS, IPI, PIS and COFINS). The determination of the manner in which various Brazilian federal, state and municipal taxes apply to the operations of Bunge is subject to varying interpretations arising from the complex nature of Brazilian tax law. Bunge monitors the Brazilian federal and state governments' responses to recent Brazilian Supreme Court decisions invalidating certain ICMS incentives and benefits granted by various states on constitutional grounds. While Bunge was not a recipient of any of the incentives and benefits that were the subject of the Supreme Court decisions, it has received certain similar tax incentives and benefits. Bunge has not received any tax assessment related to the validity of ICMS incentives or benefits it has received and, based on its assessment of the matter under the provisions of GAAP, no liability has been recorded in the consolidated financial statements.

The Argentine tax authorities have been conducting a review of income and other taxes paid by exporters and processors of cereals and other agricultural commodities in the country. In that regard, in October 2010, the Argentine tax authorities carried out inspections at several of Bunge's locations in Argentina relating to allegations of income tax evasion covering the periods from 2007 to 2009. In December 2012, Bunge's Argentine subsidiary received an income tax assessment relating to fiscal years 2006 and 2007 with a claim of approximately 436 million pesos (approximately \$89 million as of December 31, 2012), plus accrued interest of approximately

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

22. COMMITMENTS AND CONTINGENCIES (Continued)

593 million pesos (approximately \$121 million as of December 31, 2012). Bunge's Argentine subsidiary has appealed this assessment before the National Tax Court. Additionally, in April 2011, the Argentine tax authorities conducted inspections of Bunge's locations and those of several other grain exporters with respect to allegations of evasion of liability for value-added taxes and an inquest proceeding has been initiated in the first quarter of 2012 to determine whether there is any potential criminal culpability relating to these matters. Also during 2011, Bunge paid \$112 million of accrued export tax obligations in Argentina under protest while reserving all of its rights in respect of such payment. In the first quarter of 2012, the Argentine tax authorities assessed Bunge's interest on these paid export taxes in an amount totaling approximately \$80 million. Additionally, in April 2012, the Argentine government suspended Bunge's Argentine subsidiary from a registry of grain traders and, in October 2012, the government excluded Bunge's subsidiary from this registry in connection with the income tax allegations. These actions primarily result in additional administrative requirements and increased logistical costs on domestic grain shipments within Argentina. While the suspension and exclusion have not had a material adverse effect on Bunge's business in Argentina, Bunge is challenging the exclusion from the grain registry in the Argentine courts. Management believes that these tax-related allegations and claims are without merit and intends to vigorously defend against them. However, management is, at this time, unable to predict their outcome.

In December, 2012, the Brazilian IRS concluded an examination of the PIS and COFINS tax returns of one of Bunge's Brazilian subsidiaries for the years 2004-2007 and proposed adjustments totaling approximately \$140 million plus applicable interest and penalties. Management, in consultation with external legal advisors, has reviewed and responded to the proposed adjustments. In conjunction with this review, management has established appropriate reserves for potential exposures.

Labor Claims – The labor claims relate principally to claims against Bunge's Brazilian subsidiaries. The labor claims primarily relate to dismissals, severance, health and safety, salary adjustments and supplementary retirement benefits.

Civil and Other – The civil and other claims relate to various disputes with third parties, including suppliers and customers and include \$27 million relating to a legacy environmental claim in Brazil from 1998, which was recorded in the first quarter of 2012.

Guarantees – Bunge has issued or was a party to the following guarantees at December 31, 2012:

(US\$ in millions)	MAXIMUM POTENTIAL FUTURE PAYMENTS
Customer financing ⁽¹⁾	\$ 46
Unconsolidated affiliates financing ⁽²⁾	22
Residual value guarantee ⁽³⁾	69
Total	<u>\$137</u>

(1) Bunge has issued guarantees to third parties in Brazil related to amounts owed to these third parties by certain of Bunge's customers. The terms of the guarantees are equal to the terms of the related financing arrangements, which are generally one year or less, with the exception of guarantees issued under certain Brazilian government programs, primarily from 2006 and 2007, where terms are up to five years. In the event that the customers default on their payments to the third parties and Bunge would be required to perform under the guarantees, Bunge has obtained collateral from the customers. At December 31, 2012, Bunge had approximately \$22 million of tangible property that had been pledged to Bunge as collateral against certain of these refinancing arrangements. Bunge evaluates the likelihood of customer repayments of the amounts due under these guarantees based upon an expected loss analysis and records the fair value of such guarantees as an obligation in its consolidated financial statements. Bunge's recorded obligation related to these outstanding guarantees was \$15 million at December 31, 2012.

(2) Bunge issued guarantees to certain financial institutions related to debt of certain of its unconsolidated joint ventures. The terms of the guarantees are equal to the terms of the related financings which have maturity dates in 2013, 2014 and 2017. There are no recourse provisions or collateral that would enable Bunge to recover any amounts paid under these guarantees. At December 31, 2012, Bunge's had no recorded obligations related to these guarantees.

(3) Bunge issued guarantees to certain financial institutions which are party to certain operating lease arrangements for railcars and barges. These guarantees provide for a minimum residual value to be received by the lessor at conclusion of the lease term. These leases expire in 2016. At December 31, 2012, Bunge's recorded obligation related to these guarantees was \$4 million.

In addition, Bunge Limited has provided full and unconditional parent level guarantees of the indebtedness outstanding under certain senior credit facilities and senior notes entered into, or issued by, its 100% owned subsidiaries. At December 31, 2012, Bunge's consolidated balance sheet includes debt with a carrying amount of \$4,332 million related to these guarantees. This debt includes the senior notes issued by two of Bunge's 100% owned finance subsidiaries, Bunge Limited Finance Corp. and Bunge N.A. Finance L.P. There are no significant restrictions on the ability of Bunge Limited Finance Corp., Bunge N.A. Finance L.P. or any other Bunge subsidiary to transfer funds to Bunge Limited.

Freight Supply Agreements – In the ordinary course of business, Bunge enters into time charter agreements for the use of ocean freight vessels and freight service on railroad lines for the purpose of transporting agricultural commodities. In addition, Bunge sells the right to use these ocean freight vessels when excess freight capacity is available. These agreements generally range from two months to approximately five years, in the case of ocean freight vessels, depending on market conditions, and 5 to 17 years in the case of railroad

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

22. COMMITMENTS AND CONTINGENCIES (Continued)

services. Future minimum payment obligations due under these agreements are as follows:

(US\$ in millions)	OCEAN FREIGHT VESSELS	RAILROAD SERVICES	FUTURE MINIMUM PAYMENT OBLIGATIONS
2013	\$ 99	\$ 58	\$157
2014 and 2015	61	63	124
2016 and 2017	26	32	58
2018 and thereafter	3	226	229
Total	\$189	\$379	\$568

Actual amounts paid under these contracts may differ due to the variable components of these agreements and the amount of income earned on the sales of excess capacity. The agreements for the freight service on railroad lines require a minimum monthly payment regardless of the actual level of freight services used by Bunge. The costs of Bunge's freight supply agreements are typically passed through to the customers as a component of the prices charged for its products.

Also in the ordinary course of business, Bunge enters into relet agreements related to ocean freight vessels. Such relet agreements are similar to sub-leases. Bunge received approximately \$66 million during the year ended December 31, 2012 and expects to receive payments of approximately \$9 million in 2013 under such relet agreements.

Commitments – At December 31, 2012, Bunge had approximately \$67 million of purchase commitments related to its inventories, \$4 million of power supply contracts and \$367 million of contractual commitments related to construction in progress.

23. REDEEMABLE NONCONTROLLING INTERESTS

In July 2012, Bunge acquired a controlling interest in a newly formed oilseed processing venture in Europe (see Note 2). As part of the transaction, Bunge entered into a variable price put arrangement subject to a floor and ceiling price, whereby the noncontrolling interest holder can require the Company to acquire the remaining shares of the operation during specific option exercise periods from April to May 2016, 2017 and 2018, respectively. Bunge has elected to accrete the changes in the redemption value through additional paid-in capital over the period from the date of issuance to the earliest redemption date following the effective interest method. At December 31, 2012, \$29 million is included in redeemable noncontrolling interests in the consolidated balance sheets. The difference between redemption value and carrying amount was insignificant.

In May 2012, Bunge acquired a controlling interest in a wheat mill and bakery mix operation (see Note 2) and, as part of the transaction, Bunge entered into a variable price put arrangement whereby the noncontrolling interest holder can require Bunge to acquire the remaining shares of the operation on or after May 4, 2015. At December 31, 2012, \$9 million is included in redeemable noncontrolling interests in Bunge's consolidated balance sheets. Bunge has elected to record the variable price put at fair value with any excess of the redemption value over carrying value adjusted through a charge to additional paid-in capital. The calculation of the fair value of the variable price put (a Level 3 measurement) is determined by using an undiscounted cash flow analysis based on the Company's forecasts.

24. EQUITY

Share Repurchase Program – On June 8, 2010, Bunge announced that its Board of Directors had approved a program for the repurchase of up to \$700 million of Bunge's issued and outstanding common shares. The program was approved to run through December 31, 2011. On December 7, 2011, the Board of Directors approved a one-year extension of Bunge's existing share repurchase program through December 31, 2012. On December 5, 2012, the Board of Directors approved a \$275 million increase in the size of the share repurchase program and extended the program for an indefinite period. Bunge repurchased 1,933,286 common shares for \$120 million during the year ended December 31, 2011 and 6,714,573 common shares for \$354 million during the year ended December 31, 2010, bringing total repurchases under the program from inception through December 31, 2012 to 8,647,859 shares for \$474 million. Bunge did not repurchase any shares under the program during the year ended December 31, 2012.

Cumulative Convertible Perpetual Preference Shares – Bunge has 6,900,000, 4.875% cumulative convertible perpetual preference shares (convertible preference shares), par value \$0.01 outstanding at December 31, 2012. Each convertible preference share has an initial liquidation preference of \$100 per share plus accumulated unpaid dividends up to a maximum of an additional \$25 per share. As a result of adjustments made to the initial conversion price because cash dividends paid on Bunge Limited's common shares exceeded certain specified thresholds, each convertible preference share is convertible at any time at the holder's option into approximately 1.1059 common shares based on a conversion price of \$90.4265 per convertible preference share, subject in each case to certain specified anti-dilution adjustments (which represents 7,630,710 Bunge Limited common shares at December 31, 2012).

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

24. EQUITY

At any time on or after December 1, 2011, if the closing market price of Bunge's common shares equals or exceeds 130% of the conversion price of the convertible preference shares, for 20 trading days within any period of 30 consecutive trading days (including the last trading day of such period), Bunge may elect to cause all outstanding convertible preference shares to be automatically converted into the number of common shares that are issuable at the conversion price. The convertible preference shares are not redeemable by Bunge at any time.

The convertible preference shares accrue dividends at an annual rate of 4.875%. Dividends are cumulative from the date of issuance and are payable, quarterly in arrears, on each March 1, June 1, September 1 and December 1, commencing on March 1, 2007, when, as and if declared by Bunge's Board of Directors. The dividends may be paid in cash, common

shares or a combination thereof. Accumulated but unpaid dividends on the convertible preference shares will not bear interest. In each of the years ended December 31, 2012 and 2011, Bunge recorded \$34 million of dividends on its convertible preference shares.

Mandatory Convertible Preference Shares – Prior to the mandatory conversion date of December 1, 2010, Bunge had 862,455 mandatory convertible preference shares, with a par value \$0.01 per share and with an initial liquidation preference of \$1,000, issued and outstanding. The mandatory convertible preference shares accrued dividends at an annual rate of 5.125%. Dividends were cumulative from the date of issuance and were payable, quarterly in arrears, on each March 1, June 1, September 1 and December 1, when, as and if declared by Bunge's Board of Directors. Dividends totaling \$44 million were paid in cash in 2010 with the final dividend paid on December 1, 2010.

Accumulated Other Comprehensive Income (Loss) Attributable to Bunge – The following table summarizes the balances of related after-tax components of accumulated other comprehensive income (loss) attributable to Bunge:

(US\$ in millions)	FOREIGN EXCHANGE TRANSLATION ADJUSTMENT ⁽¹⁾	DEFERRED GAIN (LOSS) ON HEDGING ACTIVITIES	TREASURY RATE LOCK CONTRACTS	PENSION AND OTHER POSTRETIREMENT LIABILITY ADJUSTMENT	UNREALIZED GAIN (LOSS) ON INVESTMENTS	ACCUMULATED OTHER COMPREHENSIVE INCOME (LOSS)
Balance, January 1, 2010	\$ 423	\$ (5)	\$ (7)	\$ (90)	\$ (2)	\$ 319
Other comprehensive income (loss)	247	4	6	12	-	269
Income tax benefit (expense)	-	(1)	1	(5)	-	(5)
Balance, December 31, 2010	670	(2)	-	(83)	(2)	583
Other comprehensive income (loss)	(1,130)	(33)	-	(61)	-	(1,224)
Income tax benefit (expense)	-	11	-	20	-	31
Balance, December 31, 2011	(460)	(24)	-	(124)	(2)	(610)
Other comprehensive income (loss)	(805)	42	-	(47)	12	(798)
Income tax benefit (expense)	-	(15)	-	14	(1)	(2)
Balance, December 31, 2012	\$ (1,265)	\$ 3	\$ -	\$ (157)	\$ 9	\$ (1,410)

(1) Bunge has significant operating subsidiaries in Brazil, Argentina and Europe. The functional currency of Bunge's subsidiaries is the local currency. The assets and liabilities of these subsidiaries are translated into U.S. dollars from local currency at month-end exchange rates, and the resulting foreign exchange translation gains (losses) are recorded in the consolidated balance sheets as a component of accumulated other comprehensive income (loss).

25. EARNINGS PER SHARE

Basic earnings per share is computed by dividing net income available to Bunge common shareholders by the weighted-average number of common shares outstanding, excluding any dilutive effects of stock options, restricted stock unit awards, convertible preference shares and convertible notes during the reporting period. Diluted earnings per share is computed similar to basic earnings per share, except that the weighted-average number of common shares outstanding is increased to include additional shares from the assumed exercise of stock

options, restricted stock unit awards and convertible securities and notes, if dilutive. The number of additional shares is calculated by assuming that outstanding stock options, except those which are not dilutive, were exercised and that the proceeds from such exercises were used to acquire common shares at the average market price during the reporting period. In addition, Bunge accounts for the effects of convertible securities and convertible notes, using the if-converted method. Under this method, the convertible securities and convertible notes are assumed to be converted and the related dividend or

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

25. EARNINGS PER SHARE (Continued)

interest expense, net of tax, is added back to earnings, if dilutive.

The following table sets forth the computation of basic and diluted earnings per common share:

(US\$ in millions, except for share data)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Income from continuing operations	\$ 378	\$ 965	\$ 2,350
Net (income) loss attributable to noncontrolling interests	28	2	(34)
Income from continuing operations attributable to Bunge	406	967	2,316
Convertible preference share dividends and other obligations	(36)	(34)	(67)
Income (loss) from discontinued operations, net of tax	(342)	(25)	38
Net income available to Bunge common shareholders	\$ 28	\$ 908	\$ 2,287
Weighted-average number of common shares outstanding:			
Basic	146,000,541	146,583,128	141,191,136
Effect of dilutive shares:			
-stock options and awards ⁽¹⁾	1,134,945	1,042,127	1,032,143
-convertible preference shares ⁽²⁾	—	7,583,790	14,051,535
Diluted	147,135,486	155,209,045	156,274,814
Basic earnings per common share:			
Net income (loss) from continuing operations	\$ 2.53	\$ 6.37	\$ 15.93
Net income (loss) from discontinued operations	(2.34)	(0.17)	0.27
Net income attributable to Bunge common shareholders - basic	\$ 0.19	\$ 6.20	\$ 16.20
Diluted earnings per common share:			
Net income (loss) from continuing operations	\$ 2.51	\$ 6.23	\$ 14.82
Net income (loss) from discontinued operations	(2.32)	(0.16)	0.24
Net income attributable to Bunge common shareholders - diluted	\$ 0.19	\$ 6.07	\$ 15.06

(1) The weighted-average common shares outstanding-diluted excludes approximately 4 million, 4 million and 3 million stock options and contingently issuable restricted stock units, which were not dilutive and not included in the computation of diluted earnings per share for the years ended December 31, 2012, 2011 and 2010, respectively.

(2) Weighted-average common shares outstanding-diluted for the year ended December 31, 2012 excludes the effect of approximately 7.6 million weighted-average common shares that would be issuable upon conversion of Bunge's convertible preference shares because the effect would not have been dilutive.

26. SHARE-BASED COMPENSATION

For the years ended December 31, 2012, Bunge recognized approximately \$25 million and \$19 million of compensation expense, related to its stock option and restricted stock unit awards, respectively, in additional paid-in capital for awards classified as equity awards. For the year ended December 31, 2011, Bunge recognized approximately \$24 million and \$25 million of compensation expense, related to its stock option and restricted stock unit awards, respectively, in additional paid-in capital for awards classified as equity awards. For the year ended December 31, 2010, Bunge recognized approximately \$22 million and \$38 million of compensation expense, related to its stock option and restricted stock unit awards, respectively, in additional paid-in capital for awards classified as equity awards.

2009 Equity Incentive Plan and Equity Incentive Plan – During the year ended December 31, 2009, Bunge established the 2009 Equity Incentive Plan (the 2009 EIP), which was approved by shareholders at the 2009 annual general meeting. Under the 2009 EIP, the compensation committee of Bunge Board of Directors may grant equity-based awards to officers, employees, consultants and independent contractors. Awards under the 2009 EIP may be in the form of stock options, restricted stock units (performance-based or time-vested) or other equity-based awards. Prior to May 8, 2009, the date of shareholder approval of the 2009 EIP, Bunge granted equity-based awards under the Equity Incentive Plan (the Equity Incentive Plan), a shareholder approved plan. Under the Equity Incentive Plan, the compensation committee of the Bunge's Board of Directors was authorized to grant equity-based awards to officers, employees, consultants and independent contractors. The Equity Incentive Plan provided that awards may be in the form of stock options, restricted stock units (performance-based or time-vested) or other equity-based awards. Effective May 8, 2009, no further awards can be granted under the Equity Incentive Plan.

(i) Stock Option Awards – Stock options to purchase Bunge Limited common shares are non-statutory and granted with an exercise price equal to the market value of Bunge Limited common shares on the date of the grant, as determined under the Equity Incentive Plan or the 2009 EIP, as applicable. Options expire ten years after the date of the grant and generally vest and become exercisable on a pro-rata basis over a three-year period on each anniversary of the date of the grant. Vesting may be accelerated in certain circumstances as provided in the 2009 EIP and the Equity Incentive Plan. Compensation expense is recognized for option grants

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

26. SHARE-BASED COMPENSATION (Continued)

beginning in 2006 on a straight-line basis and for options granted prior to 2006, compensation expense is recognized on an accelerated basis over the vesting period of each grant.

(ii) *Restricted Stock Units* – Performance-based restricted stock units and time-vested restricted stock units are granted at no cost to employees. Performance-based restricted stock units are awarded at the beginning of a three-year performance period and vest following the end of that three-year period. Performance-based restricted stock units fully vest on the third anniversary of the date of grant. Payment of the units is subject to Bunge attaining certain targeted cumulative earnings per share (EPS) during the three-year performance period. Targeted cumulative EPS under the Equity Incentive Plan or the 2009 EIP, as applicable, is based on income per share from continuing operations adjusted for non-recurring charges and other one-time events at the discretion of the compensation committee. Vesting may be accelerated in certain circumstances as provided in the 2009 EIP and in the Equity Incentive Plan. Payment of the award is calculated based on a sliding scale whereby 50% of the performance-based restricted stock unit award vests if the minimum performance target is achieved. No vesting occurs if actual cumulative EPS is less than the minimum performance target. The award is capped at 200% of the grant for actual performance in excess of the maximum performance target for an award. Awards are paid solely in Bunge Limited common shares.

Time-vested restricted stock units are subject to vesting periods varying from three to five years and vest on either a pro-rata basis over the applicable vesting period or 100% at the end of the applicable vesting period, as determined by the compensation committee at the time of the grant. Vesting may be accelerated in certain circumstances as provided in the 2009 EIP and the Equity Incentive Plan. Time-vested restricted stock units are paid in Bunge Limited common shares upon satisfaction of the applicable vesting terms.

At the time of payout, a participant holding a vested restricted stock unit will also be entitled to receive corresponding dividend equivalent share payments. Dividend equivalents on performance-based restricted stock units are capped at the target level. Compensation expense for restricted stock units is equal to the market value of Bunge Limited common shares at the date of the grant and is recognized on a straight-line basis over the vesting period of each grant.

2007 Non-Employee Directors' Equity Incentive Plan – Bunge has established the Bunge Limited 2007 Non-Employee Directors' Equity Incentive Plan (the 2007 Directors' Plan), a shareholder approved plan. Under the 2007 Directors' Plan, the compensation committee may grant equity based awards to non-employee directors of Bunge Limited. Awards may consist of restricted stock, restricted stock units, deferred restricted stock units and non-statutory stock options.

(i) *Stock Option Awards* – Stock options to purchase Bunge Limited common shares are granted with an exercise price equal to the market value of Bunge Limited common shares on the date of the grant, as determined under the 2007 Directors' Plan. Options expire ten years after the date of the grant and generally vest and are exercisable on the third anniversary of the grant date. Vesting may be accelerated in certain circumstances as provided in the 2007 Directors' Plan. Compensation expense is recognized on a straight-line basis.

(ii) *Restricted Stock Units* – Restricted stock units and deferred restricted stock units are granted at no cost to the non-employee directors. Restricted stock units generally vest on the third anniversary of the grant date and payment is made in Bunge Limited common shares. Deferred restricted stock units generally vest on the first anniversary of the grant date and payment is deferred until after the third anniversary of the date of grant and made in Bunge Limited common shares. Vesting may be accelerated in certain circumstances as provided in the 2007 Directors' Plan.

At the time of payment, a participant holding a restricted stock unit or deferred restricted stock unit is also entitled to receive corresponding dividend equivalent share payments. Compensation expense is equal to the market value of Bunge Limited common shares at the date of grant and is recognized on a straight-line basis over the vesting period of each grant.

Non-Employee Directors' Equity Incentive Plan – Prior to the May 25, 2007 shareholder approval of the 2007 Directors' Plan, Bunge granted equity-based awards to its non-employee directors under the Non-Employee Directors' Equity Incentive Plan (the Directors' Plan) which is also a shareholder approved plan. The Directors' Plan provides for awards of non-statutory stock options to non-employee directors. The options vest and are exercisable on the January 1st following the grant date. Vesting may be accelerated in certain circumstances as provided in the Directors' Plan. Compensation expense has been recognized for option grants beginning in 2006 on a straight-line basis and for options granted prior to 2006 on an accelerated basis over the vesting period of each grant. Effective May 25, 2007, no further awards are granted under the Directors' Plan.

The fair value of each stock option granted under any of Bunge's equity incentive plans is estimated on the grant date using the Black-Scholes-Merton option-pricing model with the assumptions noted in the following table. The expected volatility of Bunge's common shares is based on historical volatility calculated using the daily closing price of Bunge's shares up to the grant date. Bunge uses historical employee exercise behavior for valuation purposes. The expected option term of granted options represents the period of time that the granted options are expected to be outstanding based on historical experience and giving consideration for the contractual terms, vesting periods and expectations of future employee behavior. The risk-free interest rate is based on U.S.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

26. SHARE-BASED COMPENSATION (Continued)

Treasury zero-coupon bonds with a term equal to the expected option term of the respective grants and grant dates.

ASSUMPTIONS:	2012	2011	DECEMBER 31, 2010
Expected option term (in years)	5.94	5.39	5.43
Expected dividend yield	1.48%	1.29%	1.36%
Expected volatility	44.26%	45.45%	44.34%
Risk-free interest rate	1.15%	2.48%	2.56%

A summary of option activity under the plans for the year ended December 31, 2012 is presented below:

OPTIONS	SHARES	WEIGHTED-AVERAGE EXERCISE PRICE	WEIGHTED-AVERAGE REMAINING CONTRACTUAL TERM (YEARS)	AGGREGATE INTRINSIC VALUE
(US\$ in millions)				
Outstanding at January 1, 2012	5,414,647	\$ 62.45		
Granted	1,127,525	67.63		
Exercised	(625,462)	37.84		
Forfeited or expired	(174,891)	80.86		
Outstanding at December 31, 2012	5,741,819	\$65.59	5.96	\$62
Exercisable at December 31, 2012	3,819,070	\$64.39	4.62	\$53

The weighted-average grant date fair value of options granted during the years ended December 31, 2012, 2011 and 2010 was \$25.06, \$27.99 and \$23.70, respectively. The total intrinsic value of options exercised during the years ended December 31, 2012, 2011 and 2010 was approximately \$19 million, \$24 million and \$4 million, respectively. The excess tax benefit classified as a financing cash flow was not significant for any of the periods presented.

At December 31, 2012, \$27 million of total unrecognized compensation cost related to non-vested stock options granted under the Equity Incentive Plan is expected to be recognized over the next two years.

A summary of activity under Bunge's restricted stock unit plans for the year ended December 31, 2012 is presented below.

RESTRICTED STOCK UNITS	SHARES	WEIGHTED-AVERAGE GRANT-DATE FAIR VALUE
Restricted stock units at January 1, 2012 ⁽¹⁾	1,185,855	\$ 61.62
Granted	612,724	67.08
Vested/issued ⁽²⁾	(105,750)	60.42
Forfeited/cancelled ⁽²⁾	(360,084)	54.44
Restricted stock units at December 31, 2012⁽¹⁾	1,332,745	\$ 66.17

(1) Excludes accrued unvested dividends, which are payable in shares upon vesting of Bunge's common shares. At December 31, 2012, there were 27,966 unvested dividends accrued. Accrued unvested dividends are revised upon non-achievement of performance targets.

(2) During the year ended December 31, 2012, Bunge issued 105,750 common shares, net of common shares withheld to cover taxes, including related common shares representing accrued dividends, with a weighted-average fair value of \$64.01 per share. At December 31, 2012, Bunge has approximately 19,280 deferred common share units including common shares representing accrued dividends. During the year ended December 31, 2012, Bunge canceled approximately 322,355 shares related to performance-based restricted stock unit awards that did not vest due to non-achievement of performance targets and performance-based restricted stock unit awards that were withheld to cover payment of employee related taxes.

The weighted-average grant date fair value of restricted stock units granted during the years ended December 31, 2012, 2011 and 2010 was \$67.08, \$70.36 and \$58.67, respectively.

At December 31, 2012, there was approximately \$35 million of total unrecognized compensation cost related to restricted stock units share-based compensation arrangements under the 2009 EIP, the Equity Incentive Plan and the 2007 Non-Employee Directors' Plan, which is expected to be recognized over the next two years. The total fair value of restricted stock units vested during the year ended December 31, 2012 was approximately \$9 million.

Common Shares Reserved for Share-Based Awards – The 2007 Directors' Plan and the 2009 EIP provide that 600,000 and 10,000,000 common shares, respectively, are to be reserved for grants of stock options, stock awards and other awards under the plans. At December 31, 2012, 363,284 and 5,607,845 common shares were available for future grants under the 2007 Directors' Plan and the 2009 EIP, respectively.

27. LEASE COMMITMENTS

Bunge routinely leases storage facilities, transportation equipment and office facilities under operating leases. Future minimum lease payments by year and in the aggregate under

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

27. LEASE COMMITMENTS (Continued)

non-cancelable operating leases with initial or remaining terms of one year or more at December 31, 2012 are as follows:

(US\$ in millions)	MINIMUM LEASE PAYMENTS
2013	\$169
2014	117
2015	108
2016	92
2017	56
Thereafter	275
Total	<u>\$817</u>

Net rent expense under non-cancelable operating leases is as follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Rent expense	\$189	\$227	\$203
Sublease income	(35)	(41)	(46)
Net rent expense	<u>\$154</u>	<u>\$186</u>	<u>\$157</u>

In addition, Bunge enters into agricultural partnership agreements for the production of sugarcane. These agreements have a remaining life of five years and cover approximately 228,000 hectares of land under cultivation. Amounts owed under these agreements are dependent on several variables including the quantity of sugarcane produced per hectare, the total recoverable sugar (ATR) per ton of sugarcane produced and the price for each kilogram of ATR as determined by Consecana, the Sao Paulo state sugarcane and sugar and

ethanol council. During the years ended December 31, 2012, 2011 and 2010, Bunge made payments related to these agreements of \$181 million, \$91 million and \$61 million, respectively. Of these amounts \$127 million, \$40 million and \$23 million, respectively, were payments for advances on future production and \$54 million, \$51 million and \$38 million, respectively, were included in cost of goods sold in the consolidated statements of income for the years ended December 31, 2012, 2011 and 2010, respectively.

28. OPERATING SEGMENTS AND GEOGRAPHIC AREAS

Bunge has five reportable segments—agribusiness, sugar and bioenergy, edible oil products, milling products and fertilizer—which are organized based upon similar economic characteristics and are similar in nature of products and services offered, the nature of production processes, the type and class of customer and distribution methods. The agribusiness segment is characterized by both inputs and outputs being agricultural commodities and thus high volume and low margin. The sugar and bioenergy segment involves sugarcane growing and milling in Brazil, sugar merchandising in various countries, as well as sugarcane-based ethanol production and corn-based ethanol investments and related activities. The edible oil products segment involves the manufacturing and marketing of products derived from vegetable oils. The milling products segment involves the manufacturing and marketing of products derived primarily from wheat and corn. Following the completion of the sale of Bunge's Brazilian fertilizer nutrients assets in May 2010 (see Note 3) and the classification of the Brazilian fertilizer distribution and North American fertilizer businesses as discontinued operations (see Note 3), the activities of the fertilizer segment include its port operations in Brazil and its operations in Argentina. Additionally, Bunge has retained its 50% interest in its fertilizer joint venture in Morocco.

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

28. OPERATING SEGMENTS AND GEOGRAPHIC AREAS (Continued)

The “Unallocated” column in the following table contains the reconciliation between the totals for reportable segments and Bunge consolidated totals, which consist primarily of corporate items not allocated to the operating segments and inter-segment eliminations. Transfers between the segments are generally valued at market. The revenues generated from these transfers are shown in the following table as “Inter-segment revenues segments or inter-segment eliminations.”

(1) During the year ended December 31, 2012, Bunge recorded a pre-tax impairment charge of \$514 million in its sugar and bioenergy segment for the write-down of goodwill. In addition, Bunge recorded pre-tax impairment charges of \$30 million and \$19 million in selling, general and administrative expenses and other income (expense)-net, respectively related to the write-down of two separate affiliate loans to joint ventures and three separate equity method investments. Of these pre-tax impairment charges, \$1 million and \$9 million were allocated to the agribusiness segment in selling, general and administrative expenses and other income (expense)-net, respectively, and \$29 million and \$10 million was allocated to the sugar and bioenergy segment in selling, general and administrative expenses and other income (expense)-net, respectively.

(2) Includes the noncontrolling interests' share of interest and tax to reconcile to consolidated noncontrolling interests.

(3) During the year ended December 31, 2010, Bunge sold its Brazilian fertilizer nutrients assets, including its interest in Fertilizantes Fosfatados S.A. (Fosfertil). Bunge recognized a pre-tax gain of \$2,440 million on this transaction which is included in segment EBIT (see Note 3). In addition, included in segment EBIT for 2010 is an unallocated loss of \$90 million related to loss on extinguishment of debt (see Note 17).

Also during the year ended December 31, 2010, Bunge recorded pre-tax impairment charges of \$77 million in cost of goods sold related to its operations in Europe, Brazil and the U.S. Of these pre-tax impairment charges, \$35 million of these charges were allocated to the agribusiness segment, \$28 million to the edible oil products segment and \$14 million to the milling products segment. In addition, Bunge recorded pre-tax restructuring charges of \$19 million in cost of goods sold, related primarily to termination benefit costs of its U.S. and Brazil operations, which it allocated \$10 million, \$1 million, \$4 million and \$4 million to its agribusiness, sugar and bioenergy, edible oil products and fertilizer segment, respectively. Bunge also recorded \$10 million in selling, general and administrative expenses, related to its Brazilian operations, which it allocated \$3 million, \$3 million, \$3 million and \$1 million to its agribusiness, sugar and bioenergy, edible oil products and milling products segment, respectively, in its consolidated statements of income (see Note 10).

(4) Represents net income (loss) from discontinued operations (see Note 3).

BUNGE LIMITED AND SUBSIDIARIES

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

28. OPERATING SEGMENTS AND GEOGRAPHIC AREAS (Continued)

Total segment earnings before interest and taxes (EBIT) is an operating performance measure used by Bunge's management to evaluate segment operating activities. Bunge's management believes total segment EBIT is a useful measure of operating profitability, since the measure allows for an evaluation of the performance of its segments without regard to its financing methods or capital structure. In addition, EBIT is a financial measure that is widely used by analysts and investors in Bunge's industries.

A reconciliation of total segment EBIT to net income attributable to Bunge follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Total segment EBIT from continuing operations	\$ 628	\$1,189	\$3,198
Interest income	53	96	67
Interest expense	(294)	(295)	(294)
Income tax (expense) benefit	6	(55)	(699)
Income (loss) from discontinued operations, net of tax	(342)	(25)	38
Noncontrolling interests' share of interest and tax	13	32	44
Net income attributable to Bunge	\$ 64	\$ 942	\$2,354

Net sales by product group to external customers were as follows:

(US\$ in millions)	YEAR ENDED DECEMBER 31,		
	2012	2011	2010
Agricultural commodities products	\$44,561	\$38,844	\$30,057
Sugar and bioenergy products	4,659	5,842	4,455
Edible oil products	9,472	8,839	6,783
Wheat milling products	1,027	1,186	1,082
Corn milling products	806	820	523
Fertilizer products	466	566	1,053
Total	\$60,991	\$56,097	\$43,953

Geographic area information for net sales to external customers, determined based on the location of the subsidiary making the sale, and long-lived assets follows:

Low	\$ 65.39	\$ 65.42	\$ 56.10	\$ 55.51	

(1) Net income for the fourth quarter of and year ended 2012 included an after-tax goodwill impairment charge of \$339 million.

(2) Earnings per share to Bunge common shareholders for both basic and diluted is computed independently for each period presented. As a result, the sum of the quarterly earnings per share for the years ended December 31, 2012 and 2011 does not equal the total computed for the year.

(3) Subsequent to the issuance of its third quarter financial statements for 2011, the Company became aware that net income for the third quarter excludes \$33 million, net of tax, related to unrealized gains that were incorrectly excluded from results in the quarter. These mark-to-market gains arose from the impact of fluctuations in the Brazilian *real* at the end of the third quarter on certain foreign exchange derivatives associated with forward commodity contracts with farmers in Brazil. These gains substantially reversed in the first weeks of the fourth quarter, resulting in an offsetting mark-to-market loss of an equal amount that would have been recorded in the fourth quarter if the unrealized gains had been included in the third quarter.

Based upon an evaluation of all relevant quantitative and qualitative factors, and after considering the provisions of APB Opinion No. 28, *Interim Financial Reporting*, paragraph 29, SAB No. 99, *Materiality*, and SAB 108, management believes the error was not material to the interim periods affected and therefore has not restated these financial statements.

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
