

★ A NATIONAL ASSET FOR NATIONAL MISSIONS ★

**CACI**  
EVER VIGILANT

2006 Annual Report

**To support our nation’s vital national missions, America relies on the vigilance of a trusted national asset.**

**The stakes are the very highest** — from victory in the war on global terrorism to security for our people and homeland, to sweeping enhancements in the quality and efficiency of essential government services.

CACI has supported critical missions like these for decades, aligning our people, processes, and solutions to meet our customers’ technology requirements. It’s a strategy that works. CACI has achieved consistent growth, even in the face of tight federal budgets. In many sectors, we serve as a Tier 1 prime contractor. But most importantly, our strategy has made us a national asset for taking on the challenges ahead.

**Vigilance** has many faces at CACI. In readiness. In execution. And in maintaining our place as a national asset for:

**Thought leadership** that guides effective technology and enterprise directions for the future.

**Innovative solutions** to meet information, systems, and network needs when and where they are required worldwide.

**World-class professionals** who are committed to the success of the missions they serve.

**Integrity** in every facet of our business and performance.

**A focus on value** for our shareholders and our customers.

**This year begins our company’s 45th year in business.** CACI’s journey began in California in 1962, supporting one of the world’s first software programming languages.

We’ve grown since then into a top-tier information technology provider, serving national priorities in defense, intelligence, homeland security, and government transformation.

From our first contract award for \$17,000, to the multibillion-dollar bids we are winning today, CACI has made a steadfast commitment to bringing ideas, people, and technologies together for the national good ... and always delivering quality client service and best value.

**We salute our customers, shareholders, and employees.**

**Our customers** know we will continue to apply advanced information technology to support their vital missions.

**Our shareholders** are assured we will perform at the highest levels of honesty, integrity, and excellence.

**Our employees** understand we are deeply committed to their success, and are grateful for their ability to support our growth.

We also offer special words of welcome to the new members of Team CACI who joined us through acquisitions this year. Their outstanding talents help us continue to stay ahead of the curve.

At CACI, we are dedicated to excellence in all we do — and remain *Ever Vigilant* in support of our customers, our shareholders, and each other.

*William M. Fairl, Executive Vice President, Chief Operating Officer, U.S. Operations, CACI, INC.-FEDERAL*

### The CACI Story

In 1962, CACI opened for business with a phone booth, a park bench, and a vision of providing pioneering technologies that serve and advance critical missions. Today, we remain true to that vision. CACI has grown into a \$1.76 billion company, providing full life-cycle technology solutions, services, and thought leadership for defense and civilian government, as well as government and commercial customers in Europe.

### Solutions We Provide

#### Systems Integration

Designing, developing, and implementing large complex systems, including combat systems, command and control, and enterprise systems for finance, acquisition, human resources, and program management.

#### Managed Network Services

Designing, developing, operating, and maintaining global networks, focusing on special-purpose networks, secure transmission, and rapid deployment.

#### Intelligence Solutions

Specialized systems, information technology (IT), network, knowledge management, and security capabilities for intelligence requirements, plus critical subject matter expertise.

#### Knowledge Management

Services, analysts, and tools for rapidly compiling and managing vast amounts of data, often from multiple sources and in multiple formats, to generate timely, useful information.

#### Engineering Services

Complete acquisition, prototyping, test and evaluation, logistics, and maintenance systems and services, specializing in quick-reaction support.

### Markets We Serve

#### Defense

Serving the net-centric mission, logistics, and business requirements of the Department of Defense (DoD) and all Service Branches.

#### Intelligence

Providing the national intelligence community with solutions and services needed to anticipate and support its rapidly evolving missions.

#### Homeland Security

Helping protect America’s ports, coasts, and borders, as well as critical assets throughout our country.

#### Government Transformation

Supplying the networks, systems, and processes that are transforming the efficiency and effectiveness of government.

## Financial HIGHLIGHTS

### Income Statement Data (in thousands, except per share data)

Year ended June 30	2006	% Change	2005
Revenue	\$1,755,324	8%	\$1,623,062
Operating Income	150,280	6%	142,132
Net Income	84,840	6%	79,725
Diluted Income per Share	2.72	4%	2.61
Equivalent Shares	31,161		30,568

### Balance Sheet Data (in thousands, except percents)

June 30	2006	2005
Total Assets	\$1,368,090	\$1,206,639
Working Capital	238,464	284,186
Shareholders' Equity	745,359	621,034
Return on Equity	12.4%	14.1%

To My Fellow  
SHAREHOLDERS

and Chief Executive Officer,  
CACI International Inc*

**CACI has seen a year of major accomplishments achieved in a highly challenging environment.**

In Fiscal Year 2006, CACI achieved major accomplishments and continued our growth strategy in a highly challenging environment.

Throughout this fiscal year, the benefits of our strategic market focus, our proven strategy for growth, and our commitment to customers resulted in considerable gains and a solid, targeted foundation for growth in Fiscal Year 2007 and beyond. Because of the challenges our industry faced, CACI's robust overall growth of recent years outpaced this year's level. Nevertheless, our fundamentals remain strong. The long-term health of our business is excellent. And most importantly, we believe the outlook for our future is very positive. These highlights explain why:

- Our company achieved a record level of contract awards totaling approximately \$2 billion — the largest amount for any 12-month period in our history.
- CACI was awarded a large-company position on a major U.S. Army contract with a ceiling value of \$19.25 billion.
- We completed five acquisitions that had combined annual revenues of approximately \$250 million and strengthened both our domestic and international operations.

CACI accomplished these milestones in spite of several significant obstacles. First, the budget for our largest group of customers, those in the Department of Defense, was signed into law later than at any time in the last 10 years. Second, spending for these customers was further constrained when supplemental funding was also signed later than expected. And finally, we needed to replace work that we either did not retain competitively or was delayed by decisions of the customer. Our success in overcoming these obstacles is positive news indeed.

As we entered Fiscal Year 2007, our funded backlog of business was \$983 million, 11 percent higher than a year earlier. Our total backlog at the end of Fiscal Year 2006 was \$4.6 billion, a 35 percent increase over the previous year. Contract funding orders for the year, the “fuel” that drives our revenue and profits in the short term, were \$1.76 billion. At the end of Fiscal Year 2006, we had approximately \$2.9 billion in submitted proposals under evaluation and a pipeline of qualified opportunities over the next 24 months of nearly \$13 billion, including approximately \$7 billion in opportunities worth more than \$100 million each. Our operation in the United Kingdom achieved significant growth in both its government and commercial business, while expanding its reach into new markets throughout Europe. Together with a mergers and acquisitions program that positions us as a leading strategic consolidator in our market space, we believe these key indicators demonstrate the health of CACI's business and point toward our return to higher levels of growth this year and in the coming years.

**Competing and Serving as a National Asset**

At CACI, our solutions are aligned with the nation's highest priorities. We provide the information technology resources America needs to prevail in the war on terrorism, to secure our homeland, and to improve government services. This focus has made CACI a trusted national asset for the vital interests of our country and its citizens. In this annual report, you will learn many of the ways our diverse operations serve these interests and how this strategy strengthens our company and builds shareholder value.

Last year in my letter to you, I stated that the “rapid growth we have experienced over the last few years has positioned us

to move into the ‘next level’ of competition for business opportunities and highly skilled employees.” This transition is well underway. I'm pleased to report that we continue to make significant progress on the competitive front through the large number of awards we announced in Fiscal Year 2006. Our award of one of the four positions for large companies on the \$19.25 billion U.S. Army Strategic Services Sourcing contract firmly establishes CACI as a leader in delivering services and solutions to the military in support of C4ISR (command, control, communications, computers, intelligence, surveillance, and reconnaissance). In addition, our leadership role with the U.S. Navy's mine countermeasure program makes us a key partner in this strategic component of 21st-century naval missions. Throughout the year, our performance in helping customers execute a vast range of critical missions has given us the credentials and credibility to bid competitively for larger contracts and to partner on key strategic opportunities that will open many doors for us in the years ahead, across the entire federal government.

As a whole, the federal marketplace will continue to grow more competitive and challenging. The business we seek from the federal government increasingly involves multiple-award, indefinite delivery/indefinite quantity (ID/IQ) contracts over several years. To meet our long-term growth objectives and to remain competitive, we must be able to capture and win our share of these key opportunities. In addition, CACI must successfully grow in a tightening fiscal climate as expanding federal budget deficits limit the total amount of discretionary dollars available to our government customers. In this environment, they will be asked to do even more with less. While we believe that national defense, intelligence, and homeland

security will remain high-priority areas for continued funding, their budgets will be subject to increased scrutiny and oversight. At the same time, more and more federal employees will be eligible to retire over the next several years — creating what the government calls a “retirement tsunami.” Through all of these challenges, it will be more important than ever for CACI, as a key partner of our government customers, to bring greater value to the services and solutions we deliver.

**What's Ahead for CACI**

Our nation is engaged in a long war against those who inflict terror upon innocent people around the world. At the same time, our government must remain vigilant in monitoring the activities of those nations whose economic or military interests could disrupt the peace and security of the United States and other nations around the globe. To support these critical missions, technologies must keep evolving to better collect, analyze, and disseminate actionable intelligence, for everyone from our national leadership to warfighters on the ground. Information and intelligence are where the growth in federal spending is likely to be. In the final analysis, countering the threats to our national security demands accurate information from quality sources, communicated through secure channels to the right people at the right time.

CACI is at the forefront of meeting these national priorities. We will continue to work side by side with our customers throughout the federal government, delivering innovative solutions for their information, systems, and network requirements worldwide. We will continue to support our nation during dangerous times, and we will continue to support our clients wherever and whenever needed.

**Forty-five Years and Growing**

Fiscal Year 2007 marks the beginning of CACI's 45th year in business. Over the years, we have seen administrations change nine times, often bringing in new leadership from different political parties and with differing agendas and priorities. Through every change, CACI has remained steadfast in supporting our government and our nation. We believe this vitality is a sign of the strength of our company and our people. It reflects our sustained customer loyalty, understanding of customer needs, and successful business strategies.

I am proud to represent a company as accomplished as CACI, a company built on the contributions and energy of so many. I congratulate our CACI employees, who provide the client relationships that enable our success. I applaud our experienced and highly qualified senior management team for its leadership, and our Board of Directors for its involvement on behalf of you, our shareholders. We look forward to extending CACI's success, accelerating the company's growth, and enhancing shareholder value during Fiscal 2007 and beyond.

**Dr. J.P. (Jack) London**  
*Chairman of the Board, President,  
and Chief Executive Officer,  
CACI International Inc*

*Michael J. Bayer and Larry D. Welch are leaving CACI's Board of Directors after four years of service each. We thank them for their support and wish them all the best in their future endeavors.*

## CACI increases the effectiveness of the warfighter around the globe, providing the resources and rapid support that battlefield dominance demands.

**The Global War on Terrorism is sometimes called “the long war,”** a conflict of people, weapons, and ideas that we have now been fighting longer than we fought in World War II. Its nature is unlike any conflict in our history. We face technically savvy enemies who range from zealous individuals and independent terrorist cells to entire countries. Together, they pose a threat that will take years to eliminate. CACI plays a vital role in meeting this challenge — for the warfighter in the field, for our global defense infrastructure, and for decision-makers throughout the chain of command.

Our full life-cycle solutions span the spectrum of network-centric warfare and defense transformation. These solutions deliver the situational awareness and communications required for joint operations. They support agile, turn-on-a-dime forces that can deploy rapidly anywhere the mission demands. And they provide quick-reaction acquisition, engineering, and logistics to assure readiness and operational strength. In a world that remains a dangerous place, CACI remains a national asset for defense.

### The First Tier in C4ISR Support

As one of the prime contractors for the U.S. Army’s Strategic Services Sourcing program, CACI is now a premier provider of command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) — the enabling technology of net-centric warfare. From general to quick-reaction solutions and support, we equip fighting forces for 21st-century warfare through this 10-year program, the largest award in CACI’s history.

### Supporting Littoral and Mine Warfare

To effectively support 21st-century mission requirements, the U.S. Navy turned to CACI for its littoral and mine warfare program. In a major expansion of our work in this area, we provide acquisition, management, engineering, and logistics support for current and next-generation littoral, mine, and improvised explosive device countermeasure programs, including innovative unmanned vehicles and systems for explosive ordnance disposal and force protection.

### Aircraft Command and Control (C2) Across the Pacific

CACI professionals provide a comprehensive level of C2 services and planning processes to support the Pacific Air Force’s execution of contingencies and exercises across the full spectrum of operations. These have included everything from humanitarian assistance and disaster relief to major theater warfare.

### Keeping the Government Informed 24/7

When trouble strikes anywhere in the world, defense and armed forces officials are alerted — thanks largely to the work of the Defense Information Systems Agency (DISA). CACI supplies mission, logistical, and security support for this global, round-the-clock communications effort, which provides secure, highly reliable connections to data, voice, and videoconferencing services.

**America's national intelligence capabilities must be agile, effective, and secure. They must deliver accurate, predictive information to decision-makers. We deliver the solutions that make it possible.**

**The national intelligence community faces responsibilities and challenges** unlike any in its history. Supply timely, actionable information on terrorist activities worldwide. Share information effectively and securely among multiple agencies, levels of government, and foreign partners. Identify, develop, and deploy transformational technologies. Integrate strategic and tactical intelligence into one seamless entity. Enable situational awareness at every level of government and across the defense community.

Meeting these challenges has made intelligence solutions a strong and continuing growth area for CACI. We support all four of the intelligence community's priority focus areas: analysis, collection, user outcomes, and management. Today, our customers rely on our solutions to improve the quality and breadth of intelligence analysis and collection — from all sources. CACI's proven collaboration tools and processes assure effective outcomes for real-world needs. And as the intelligence community migrates to a culture of integrated collaboration across agencies and functions, we supply the enterprise capabilities needed for optimum results. CACI proudly serves as a national asset for national intelligence.

## **The Smart Choice for Smart Networks**

The new priorities of national intelligence demand smart networks that consolidate existing intelligence networks and enable collaboration using data from all sources. Such networks must serve users of intelligence from the White House to local law enforcement. And they must offer security at every level. CACI's rare combination of intelligence and IT experience makes us the smart choice for smart networks for years to come.

## **Exploiting Intelligence From All Sources**

In the past, the problem was too much data. CACI turns this around. Now more data, presented using modern information management capabilities, means better intelligence. We are experts in every source of intelligence, from human to open sources. Combining this experience with our knowledge management and data fusion capabilities, CACI takes intelligence analysis and collection to new levels of effectiveness.

## **Training for a New World of Intelligence**

As the technology, business, and management of intelligence evolve, training requirements grow more complex and urgent. CACI provides expert training and education support to the intelligence community. We provide IT support, training, and courseware development for the U.S. Army Intelligence Center's University of Military Intelligence. CACI also leads a consortium of industry, small business, and academia with broad capabilities for improving intelligence education and training.

## **Countering Foreign Espionage**

Now in use worldwide by DoD Counterintelligence field elements, the GlobalView system, developed by CACI under contract to the Counterintelligence Field Activity, employs the HighView® document and records management application to help combat the growing foreign adversary intelligence collection threat. Already, the system has been instrumental in several prominent U.S. Government Commerce-controlled technology protection and espionage cases. GlobalView greatly enhances the collection, analysis, and reporting of large quantities of data, which has led to numerous indictments and convictions.

*HighView is a registered trademark of CACI.*

## Tested on the frontlines of homeland security, our technologies and experts help safeguard America's people, property, and critical infrastructure.

### The threats to our homeland are unprecedented.

One individual can cause devastating loss of life and property. As America continues to expand its capacity to anticipate, prevent, and prepare for these threats, CACI has become a key resource for planning, development, and technology.

Our solutions serve the highest levels of government, from the White House to the Departments of Homeland Security and Defense. We support state governments and first responders, providing incident management systems and unified command suites for emergency operations. We help assure information sharing across agencies and jurisdictions. Enhancing every solution is the insight of CACI professionals who have served on the frontlines during national disasters.

These are the reasons why CACI is a thought leader in the homeland security community. The challenges ahead are formidable. The need for reliable solutions and domain expertise will continue to grow. CACI will be there, a national asset for homeland security.

### Situational Awareness to Stop an Epidemic

The poultry industry and its slaughterhouses could be potential pathways for diseases such as avian flu. To help educate food safety inspectors and provide immediate situational awareness to contain such outbreaks, the Department of Agriculture (DoA) turned to CACI for a near-real-time surveillance and data network to share information among staff at poultry industry and DoA facilities. Should a disease turn up, they will know in time to act.

### Establishing and Managing a National Asset Database

Critical assets, such as dams, chemical plants, bridges, and our food and medical supply chains, are tempting targets for terrorists. Working with data collected by the Department of Homeland Security, CACI designed, populated, and now maintains the National Asset Database. The information it contains helps public officials identify critical assets, assess risk, and plan security measures.

### Protecting the Systems That Protect the Borders

The U.S. Customs and Border Protection is responsible for managing, controlling, and protecting the nation's borders. CACI provides information assurance and security services for the agency's programs, which encompass advanced IT and mission support inspection and surveillance systems. The importance of this capability will grow as the focus on border control intensifies and new systems are developed.

### Portable Hospitals and Medical Assemblages Just in Time

CACI supports the U.S. Air Force in providing quality healthcare during contingency operations. Applying advanced capabilities like integrated logistics, total asset visibility, and just-in-time delivery, we assist in the design, assembly, and transport of medical War Reserve Material assemblages that arrive when needed worldwide. This effort has placed portable hospitals in Iraq and Afghanistan, and was tapped to support Hurricane Katrina relief.

### By Their Fingerprints You Will Know Them — Now

A powerful resource for homeland security, the Department of Justice's Joint Automated Booking System (JABS) provides more than 1500 federal law enforcement offices with speedy access to the FBI fingerprint identification system. CACI has provided administrative, operational, technical, and training support to the JABS program since its inception. In under 10 minutes, JABS users can positively identify detainees and receive their criminal histories.

## Applying advanced information technologies, processes, and networks to help government achieve more with fewer resources.

**The transformation revolution is underway.** And CACI is helping lead the way. Driven by factors such as DoD initiatives and the President's Management Agenda, transformation is reshaping the way government does business, from cutting costs and controlling processes to enhancing mission effectiveness and providing better information for decision-making.

CACI is a major transformation resource to the DoD and civilian agencies such as the General Services Administration and Department of Justice. Our mission and business systems help drive their moves to service-oriented architectures and net-centric operations. Working with the Defense Business Transformation Agency (BTA), we provide support and thought leadership for the DoD's Business Enterprise Architecture and Business Transition Plan, which set standards for all new programs. To improve mission performance, CACI helps consolidate organizations such as the U.S. Navy's aviation commands into federated enterprises. With this forward-looking experience, CACI has become a national asset for government transformation.

## The Next Big Thing in Procurement Management

One of InfoWorld's Top 20 Projects of the Year for 2005, CACI's Procurement Desktop for Industry (PD-I) gives government contractors a web-based enterprise solution for proactively managing procurements. Able to support thousands of users at multiple locations, PD-I integrates the management of sell-side and buy-side procurement processes, data, and documents — from solicitations through the prime contract's life cycle and from requisitions through the subcontract's life cycle. For government agencies working with contractors that use PD-I, the benefits are lower costs, faster results, better control of the procurement process, and greater confidence that financial data is accurate and meets all contract and regulatory requirements.

## The Infrastructure of Transformational Diplomacy

Secure global networks and reliable, high-performance communications are bringing a new level of capability and operational effectiveness to the diplomatic missions of the Department of State. CACI helps make this possible by providing the full life-cycle support needed to connect America's embassies, consulates, and posts around the world.

## Preserving the Holdings of a National Treasure

The Library of Congress is the world's largest library. CACI helps plan, implement, and support its digital content management initiatives. We have helped convert and preserve documents, audiotapes, and films; capture and index web content; and construct systems that transmit, store, and retrieve vast amounts of data. CACI also assists the Library's creation of a national network of partners to collect and preserve at-risk content that would otherwise be lost.

## Enabling Paperless Contracting on the Web

Now this is transformation! Government agencies and their vendors contracting with no mountains of paper involved in receiving and accepting bills, issuing invoices, or sending payments. Wide Area Workflow, our widely accepted enterprise e-government application developed for DISA and BTA, securely processes all these transactions over the web 24/7 — with less cost, fewer errors, faster service, and easy access to data.

## Energizing Customer Relationships in Europe

EDF Energy is one of the UK's largest energy companies. EDF turned to CACI to create and host a database that uses our consumer and geodemographic data to identify new markets, target marketing campaigns, and strengthen customer relationships. Successes like this have made CACI one of the UK's leading consumer and market analysis companies, with an expanding presence in Europe.
